

**Third Professional MBBS (Part I) Degree Supplementary Examinations
June 2024****Ophthalmology
(2019 Admission Only)****Time: 3 Hours****Total Marks: 100**

- Answer all questions to the point neatly and legibly • Do not leave any blank pages between answers • Indicate the question number correctly for the answer in the margin space
- Answer all parts of a single question together • Leave sufficient space between answers
- Draw diagrams wherever necessary

Long Essays**(2x15=30)**

1. A 50-year-old farmer presents with pain, redness, watering, discharge and photophobia in the right eye since one week. He also complains of diminution of vision in the same eye since then. He gives history of trauma to the right eye with a sugar cane stick about 10 days back. On examination, there is conjunctival and circumcorneal congestion. Cornea is hazy with a central greyish white, dry looking lesion. The lesion has feathery edges and there are small infiltrates around the central lesion. Anterior chamber has a thick immobile hypopyon.
 - a) What is the probable diagnosis
 - b) What features support your diagnosis
 - c) What is the management of this condition
 - d) Which topical drug should be avoided in this condition
 - e) What are the complications if not treated
 - f) Mention the differential diagnosis
 - g) What are the preventive measures

(1+2+4+1+3+2+2)
