 - a) What is the most probable clinical diagnosis
 - b) Name the etiological agent
 - c) Discuss the pathogenesis of the disease
 - d) Describe the lab diagnosis in detail
 - e) Add a note on the drug resistance seen in this organism
 - f) Name the national programme for this disease (1+1+3+5+4+1)

Short essays**(5x8=40)**

3. Describe the etiological agents, clinical types and laboratory diagnosis of dermatophytes.
4. Describe the laboratory diagnosis and prophylaxis of tetanus
5. Discuss the pathogenesis and laboratory diagnosis of diphtheria
6. Describe the pathogenesis, laboratory diagnosis and prophylaxis of poliomyelitis
7. Free living amoebae

(PTO)

Short answers**(5x4=20)**

8. Prions
9. Antigenic variations in influenza virus
10. A CSF sample was received in microbiology lab without requisition form. How will you manage this situation
11. Standard tests for syphilis
12. Laboratory diagnosis of mycetoma

Objective type questions**(10x1=10)**

13. Name TWO oncogenic DNA viruses
14. Name ONE parasite affecting lungs
15. Name TWO fungi causing otomycosis
16. Name TWO etiological agents of non-gonococcal urethritis
17. Name TWO etiological agents causing opportunistic mycoses
18. Name TWO zoonotic infections
19. Name TWO bacterial agents causing atypical pneumonia.
20. Name the causative agent and vector of plague
21. Name TWO bacteria causing neonatal meningitis
22. Name TWO viruses causing congenital infections
