

GUJARAT TECHNOLOGICAL UNIVERSITY**BE- SEMESTER-VI (NEW) EXAMINATION – WINTER 2020****Subject Code:2160609****Date:03/02/2021****Subject Name:Computational Mechanics****Time:02:00 PM TO 04:00 PM****Total Marks: 47****Instructions:**

1. Attempt any **THREE** questions from Q.1 to Q.6 .
2. Q.7 is compulsory.
3. Make suitable assumptions wherever necessary.
4. Figures to the right indicate full marks.

- Q.1** (a) Derive member stiffness matrix of beam member. **03**
 (b) Derive the relationship $A_S = R^T A_M$ for rotation of axis in 2D. **04**
 (c) Using member stiffness approach, determine joint displacement for the beam loaded as shown in fig.1. Take $EI = 60 \text{ kNm}^2$. **07**
- Q.2** (a) Explain symmetry and anti-symmetry with neat sketches. **03**
 (b) Write rotation matrices of plane truss member and plane frame member. **04**
 (c) Using member stiffness approach, determine joint displacements for the beam loaded as shown in fig.1, if the support 'A' rotates by 10° counter-clockwise. Take $EI = 60 \text{ kNm}^2$. **07**
- Q.3** (a) Evaluate member stiffness matrices of the truss shown in fig.3. **03**
 (b) Evaluate joint displacements of the truss shown in fig.3. **04**
 (c) Determine member forces of the truss shown in fig.3. **07**
- Q.4** (a) Define stiffness and flexibility. **03**
 (b) Determine member stiffness matrices of the plane frame shown in fig.4. Take $EI = 60 \text{ kNm}^2$, $EA = 3435 \text{ kN}$. **04**
 (c) Determine joint displacements and support reactions of the plane frame shown in fig.4. Take $EI = 60 \text{ kNm}^2$, $EA = 3435 \text{ kN}$. **07**
- Q.5** (a) Write steps of finite element analysis. **03**
 (b) Derive shape functions of CST element using Cartesian coordinate. **04**
 (c) Using FEM, evaluate nodal displacements of the bar shown in fig.5. Take $E = 2 \times 10^5 \text{ N/mm}^2$. **07**
- Q.6** (a) Write displacement functions for 1D and 2D elements. **03**
 (b) Using FEM, evaluate nodal displacements of the beam shown in fig.6. Take $EI = 60 \text{ kNm}^2$. **04**
 (c) Using FEM, evaluate nodal displacements and element stresses for the bar shown in fig.7. Take $EA = 500 \text{ kN}$. **07**
- Q.7** (a) Define plane stress and plane strain problems. Write constitutive matrices of plane stress and plane strain problems. **05**
- OR**
- Q.7** (a) Derive nodal load vector for the 2-noded bar element subjected to surface traction 'T' per unit length. **05**
