001/19

# The West Bengal University of Health Sciences MBBS 1st Professional Examination, July 2019

Subject: Physiology

Full Marks: 50 Time: 2 1/2 hours

Paper: I

Attempt all questions. The figures in the margin indicate full marks.

### Group A

1. a) What are the different types of chemoreceptors regulating ventilation? How are they stimulated? List the pathways by which increased Pco2 stimulates ventilation.

b) What are the two determinants of Cardiac Output? What do you understand by preload and afterload as applied to cardiac function? Mention the factors influencing 2+4+4+2 them. What is ejection fraction?

### Group B

2. Answer any two of the following:

2 X7

Enumerate the muscle proteins. Explain briefly the sliding filament theory of muscle 1+4+2 contraction. What is Rigor Mortis?

b) How is oxygen transported in blood? Explain with a diagram the effect of PO2 on hemoglobin saturation. Comment on the effect of Carbon Monoxide on oxygen 2+3+2 binding to hemoglobin.

Draw a flow chart showing different stages of erythropoiesis with diagrammatic 5+2 representation. Add a note on erythropoietin.

## Group C

Write a brief account on any four:

4X3

- Salivary secretion.
- Rh incompatibility
- Presynaptic inhibition
- Pacemaker potential
- e) Gastro-colic reflex

#### Group D

4. Give the physiological explanation of the following:

4x3

- Hypoproteinemia causes edema.
- b) Tetanus can be demonstrated easily in a skeletal muscles.
  - c) pH of urine rises after a heavy meal.
  - d) Subendocardial region of the left ventricle is specially vulnerable to ischemia.
