B.Tech IV Year II Semester (R13) Advanced Supplementary Examinations July 2018 EMBEDDED SYSTEMS

(Electrical and Electronics Engineering)

Time: 3 hours

1

Max. Marks: 70

PART – A

(Compulsory Question)

- Answer the following: (10 X 02 = 20 Marks)
 - (a) List the applications of embedded systems.
 - (b) Differentiate SISC and RISC design.
 - (c) State about Watch dog timer.
 - (d) List on chip peripherals of MSP430x5X series.
 - (e) Justify, how data transfer takes place in MSP430.
 - (f) State the role of timer and real time clock in MSP430.
 - (g) Justify why device drivers are necessary for interfacing a device with a processor.
 - (h) Define SPI and point out the operating speed of SPI.
 - (i) State about IOT and its features.
 - (j) Describe about embedded Wi-Fi.

PART – B

(Answer all five units, 5 X 10 = 50 Marks)

UNIT – I

2 Draw and explain the architecture of MSP430 microcontroller.

OR

3 (a) Explain Hardware architecture with neat diagram.(b) Analyze the addressing modes of MSP430 microcontroller.

4 Discuss about FRAM and Flash memory for low power and reliability.

OR

5 Explain the block diagram, address space and register sets of MSP430x5x microcontroller.

UNIT – III

6 Illustrate with neat diagram for remote controller of air conditioner using MSP430.

OR

7 Explain analog interfacing and data acquisition takes place in MSP430 microcontroller.

UNIT – IV

8 Demonstrate a low-Power battery less wireless temperature and humidity sensor with passive low Frequency RFID.

OR

9 Explain how serial data transfer is performed in $I^2 C$ bus. Also brief the steps involved in transfer of a byte using $I^2 C$.

UNIT – V

10 Demonstrate the implementation of Wi-Fi connectivity in a Smart Electric Meter.

OR

11 Discuss about IOT architecture with neat diagram.
