Subjt Code: R16MBA106

# MBA - I Semester Regular Examinations, D-2018 <br> QUANTITATIVE ANALYSIS FOR BUSINESS DISIONS 

Time: $\mathbf{3}$ hours
Question Paper Consists of Part-A and Part-B
Answering the question in Part-A is Compulsory
Four Questions should be answered from Part-B, each question carries equal marks of 12.

## PART-A (CASE STUDY)

$1 \times 12=12$

1. Solve the travelling salesman problem given by the following data :
$\mathrm{C} 12:$ : 20, C13 = 4, c14 10, c23 = 5, c34 = 6,
$\mathbf{C 2 5}=10, \mathrm{c} 35=6$, c45 $=20$, where $\mathrm{C}_{\mathrm{ij}}=\mathrm{c}_{\mathrm{i}}$,
and there is no route between cities $i$ and $j$ if the value for $C_{\| 1}$ is not shown

## PART-B

$4 X 12=48$
2. Calculate Rank Correlation Coefficient between $X$ and $Y$ series :

| X | 68 | 64 | 75 | 50 | 64 | 80 | 75 | 40 | 55 | 64 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Y | 62 | 58 | 68 | 45 | 81 | 60 | 68 | 48 | 50 | 70 |

3. Solve the following LPP by graphical method

Maximize $Z=5 x_{1}+7 \mathrm{x}_{2}$ st $\mathbf{x} 1+\mathrm{x}_{2}<=4,3 \times 1+8 \mathrm{x}_{2}<=24$, $\left.10 \mathrm{x}_{\mathrm{i}}+7 \mathrm{x} 2<=35(\mathrm{x} 1, \mathrm{x} 2\rangle=0\right)$
4. What is game theory? What are its limitations? Show how a game theory problem can be formulated as a linear programming problem.
5. Solve the following transportation problem having cost structure as

| Demand | A | B | C | D | ai |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 10 | 18 | 11 | 7 | 20 |
| 2 | 9 | 12 | 14 | 6 | 40 |
| 3 | 8 | 9 | 12 | 10 | 35 |
| bj | 16 | 18 | 31 | 30 | $\mathbf{9 5}$ |

6. An engineering company is offered a material handling equipment ' A '. ' A ' is priced at Rs. 60,000 including cost of installation and the costs for operation and maintenance are estimated to be Rs. 10,000 for each of the first 5 years, increasing every year by Rs. 3000 per year in the sixth and subsequent years. The company expts a return of $\mathbf{1 0 \%}$ on all its investments. What is the optimal replacement period?
7. For the projt represented by the network diagram, find the earliest and latest times, given the following data :

| Task | $\mathbf{1 - 2}$ | $\mathbf{1 - 3}$ | $\mathbf{1 - 4}$ | $\mathbf{3 - 6}$ | $\mathbf{2 - 5}$ | $\mathbf{2 - 6}$ | $\mathbf{4 - 7}$ | $\mathbf{5 - 7}$ | $\mathbf{6 - 7}$ | $\mathbf{7 - 8}$ | $\mathbf{8 - 9}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Least <br> time to | 4 | 5 | 8 | 2 | 4 | 6 | 8 | 5 | 3 | 5 | 6 |
| Greates <br> t Time <br> tp | 8 | 10 | 12 | 7 | 10 | 15 | 16 | 9 | 7 | 11 | 13 |
| Most <br> likely <br> time $\mathrm{t}_{\mathrm{m}}$ | 5 | 7 | 11 | 3 | 7 | 9 | 12 | 6 | 5 | 8 | 9 |
