

## NKT/KS/17/6561

## B.Pharm. Semester—IV (C.B.S.) Examination PHARMACOLOGY—II

## Paper-4

| Time : Three Hours] [Max |   |   | Marks: 80         |
|--------------------------|---|---|-------------------|
|                          | N.B.: (1) Question No. 1 is compulsory. |   |                   |
|                          |   | <ol><li>Solve any FOUR questions from remaining.</li></ol>  |                   |
|                          |   | <ol><li>Draw neat labelled diagram wherever necessary.</li></ol>  |                   |
| 1.                       | Solve any five :                        |   |                   |
|                          | (a)                                     | Quinidine in cardiac arrythmia.   |                   |
|                          | (b)                                     | Cimetidine in Zollinger Ellison Syndrome.   |                   |
|                          | (c)                                     | Forced diuresis, its significance with examples.  |                   |
|                          | (d)                                     | Nitrates in angina pectoris.  |                   |
|                          | (e)                                     | Vitamin B <sub>12</sub> in anaemia.   |                   |
|                          | (f)                                     | Clofibrate in hyperlipidemia.   |                   |
|                          | -                                       | Use of Tissue plasminogen activator in Stroke.  | 4×5=20            |
| 2.                       |   | cribe the pathophysiology of CHF. Explain MOA and adverse effects of Digitalis.   | 15                |
| 3.                       |   | ssify Autocoids. Give detailed account on synthesis, storage and pharmacological actions of<br>inment on Histamine Receptors. | histamine.<br>15  |
| 4.                       | (a)                                     | Classify NSAIDs. Give MOA, Pharmacological actions and adverse effects of not Cox-inhibitors.                                 | n-selective<br>10 |
|                          | (b)                                     | Write a brief account on therapeutic actions of prostaglandins.   | 5                 |
| 5.                       | (a)                                     | Give classification of Diuretics with suitable examples. Describe MOA, adverse effect of same.                                | s and uses<br>10  |
|                          | (b)                                     | Give a note on Antidiuretic hormone.  | 5                 |
| 6.                       | (a)                                     | Classify oral anticoagulants with their MOA and uses.   | 10                |
|                          | (b)                                     | Give detailed account on tibrinolytic agent.  | 5                 |
| 7.                       | Writ                                    | Vrite short notes on any three:   |                   |
|                          | (a)                                     | Drug therapy in shock   |                   |
|                          | (b)                                     | ACE inhibitors  |                   |
|                          | (c)                                     | Phosphodiesterase inhibition  |                   |
|                          | (d)                                     | 5HT <sub>3</sub> receptors.   | 5×3=15            |
