Correct Marks : 1 Wrong Marks : 0

A 52 year-old man with raw, chapped hands is referred to a psychiatrist by his primary care doctor. The man reports that he washes his hands repeatedly, spending up to 4 hours a day, using abrasive cleaners and hot water. Although he admits that his hands are uncomfortable, he is entirely convinced that unless he washes in this manner he will become gravely ill. A medical workup is unrevealing, and the man takes no medications. What is the most appropriate diagnosis?

- a) Delusional disorder, somatic type.
- b) Illness anxiety disorder.
- c) Obsessive-Compulsive disorder, with absent insight.
- d) Obsessive-Compulsive personality disorder.

A 63-year-old woman has been saving financial documents and records for many years, placing papers in piles throughout her apartment to the point where it has become unsafe. She acknowledges that the piles are a concern; however, she says that the papers include important documents and she is afraid to throw them away. She recalls several instances in which her taxes were audited and she needed certain documents to avoid a penalty. She is concerned because her landlord is threatening to evict her unless she removes the piles of papers. What is the most likely diagnosis?

- a) Obsessive-compulsive disorder.
- b) Hoarding disorder.
- c) Delusional disorder.
- d) Non-pathological collecting behaviour.

9/16/2020

A 48-year-old man presents to a psychiatrist, stating that he was pressured by his wife to seek help. He explains that he likes to collect wine, and he does not see a problem with this; he claims that many of the wines are quite valuable and a potential investment. On further questioning, he admits that he rarely drinks the wines, because it “never seems the right time.” He has never sold or given away any wine because he finds it hard to part with the bottles. He has had to use increasing portions of his house for storage of the wine, which, along with the financial hardship, is his wife’s primary concern. He admits that many of the wine bottles have probably spoiled because he cannot afford to properly store the wine and the bottles have sat for years on shelves. What is the most appropriate diagnosis?

- a) Normal collecting behaviour.
- b) Hoarding disorder, excessive acquisition type.
- c) Obsessive-compulsive disorder.
- d) Delusional disorder.

Correct Marks : 1 Wrong Marks : 0

A 5-year-old boy has difficulty making friends and problems with initiating and sustaining back –and – forth conversation; reading social cues; and sharing his feelings with others. He makes good eye contact, has normal speech intonation, displays facial gestures, and has a range of affect that generally seems appropriate to the situation. He demonstrates an interest in trains that seems abnormal in intensity and focus, and he engages in little imaginative or symbolic play. Which of the following diagnostic requirements for autism spectrum disorder are not met in this case?

- a) Deficits in social – emotional reciprocity.
- b) Deficits in nonverbal communicative behaviour used for social interaction.
- c) Deficits in developing and maintaining relationships.
- d) Restricted, repetitive patterns of behaviour, interests, or activities as manifested by symptoms in two of the specified four categories.

A 7-year-old girl presents with a history of normal language skills (vocabulary and grammar intact) but is unable to use language in a socially pragmatic manner to share ideas and feelings. She has never made good eye contact, and she has difficulty reading social cues. Consequently, she has had difficulty making friends, which is further complicated by her being somewhat obsessed with cartoon characters, which she repetitively scripts. She tends to excessively smell objects. Because she insists on wearing the same shirt and shorts every day regardless of the season, getting dressed is a difficult activity. These symptoms date from early childhood and cause significant impairment in her functioning. What diagnosis best fits this child's presentation?

- a. Asperger's disorder.
- b. Autism spectrum disorder.
- c. Pervasive developmental disorder not otherwise specified (NOS).
- d. Social (pragmatic) communication disorder.

A 9 year-old girl presents with a history of intellectual impairment, a structural language impairment, nonverbal communication deficits, disinterest in peers, and inability to use language in a social manner. She has extreme food and tactile sensitivities. She is obsessed with one particular computer game that she plays for hours each day, and she scripts and imitates the characters in this game. She is clumsy, has an odd gait, and walks on her tiptoes. In the past year she has developed a seizure disorder and has begun to bang her wrists against the wall repetitively, causing bruising. On the other hand, she plays several musical instruments in an extremely precocious manner. Which features of this child's clinical presentation fulfill a criterion symptoms for DSM-5 autism spectrum disorder?

- a) Seizures.
- b) Structural Language impairment.
- c) Nonverbal Communicative deficits intellectual impairment.
- d) Inability to use language
