

## GUJARAT TECHNOLOGICAL UNIVERSITY

BE - SEMESTER- III (New) EXAMINATION - WINTER 2019

| Subje | ct Code: | 31314 | 405 |  |   |   |       | Date: 28/11/2019 |
|-------|----------|-------|-----|--|---|---|-------|------------------|
| ~     |          | _     |     |  | _ | _ | <br>_ | _                |

**Subject Name: Introduction to Food Processing Technology** 

| Time: 02:30 PM TO 05:00 PM | Total Marks: 70 |
|----------------------------|-----------------|
|                            |                 |

## **Instructions:**

- 1. Attempt all questions.
- 2. Make suitable assumptions wherever necessary.
- 3. Figures to the right indicate full marks.

| <b>Q.1</b> | (a)        | What are the major sectors of Indian food industry?                      | 03        |
|------------|------------|--|-----------|
|            | <b>(b)</b> | Write the principles of food preservation.                               | 04        |
| (c)        | <b>(c)</b> | A food mix is to be made that would balance the amount of methionine     | <b>07</b> |
|            |            | (MET), a limiting amino acid in terms of food protein nutritional value, |           |
|            |            | by blending several types of plant proteins. Corn, which contains 15%    |           |
|            |            | protein, has 1.2 g MET/100 g protein; soy flour with 55% protein has     |           |
|            |            | 1.7 g MET/100 g protein; and non fat dry milk with 36% protein has 3.2   |           |
|            |            | g MET/100 g protein. How much of these ingredients must be used to       |           |
|            |            | produce 100 kg of formula that contains 30% protein and 2.2 g MET/100    |           |

Q.2 (a) Classify food on the basis of pH.

03

(b) Write Short notes on

04

**07** 

**07** 

03

**07** 

- (i) HTST Pasteurization
- (ii) Modified Atmosphere Packaging
- (c) What the challenges and opportunity for the Indian food industry?

## OR

- (c) A single strength (fresh) mango juice with 10 % soluble solids is concentrated to 55% soluble solids in an evaporator. To improve the flavour of the final product, a certain amount of single strength juice is added to the concentrated juice so that the concentration of the final mixture becomes 40%. If the inlet juice flow rate is 1200 kg/h fresh juice, calculate
  - (i) Water evaporation rate.
  - (ii) How much fresh juice per hour is being added back?
  - (iii) Rate of production of final product.
- Q.3 (a) Define the Base, Derived and Supplementary units.
  - (b) What do you understand by the following terms 04
    - 1. Peeling
    - 2. Evaporation
    - 3. Relative humidity
    - 4. Dry bulb temperature
  - (c) List out the properties of psychometric chart. Draw a neat labelled diagram of psychometric chart indicating various variables.

OR

| rstraı     | nker'      | s choice www.FirstRanker.com www.FirstRanker.   | .com      |
|------------|------------|---|-----------|
| Q.3        | (a)        | Name three regulations framed by FSSAI.   | 03        |
|            | <b>(b)</b> | What are the advantages of blanching?   | 04        |
|            | (c)        | What is freezing? How is freezing different from chilling? Explain in                               | <b>07</b> |
|            |            | details the different method of freezing?   |           |
| <b>Q.4</b> | (a)        | Define D, F and Z value.  | 03        |
|            | <b>(b)</b> | Explain in brief the drying of food materials. What are the advantages of drying of food materials? | 04        |
|            | (c)        | What is canning? Draw and explain the flow chart for canning.                                       | 07        |
|            |            | OR  |           |
| Q.4        | (a)        | Why size reduction is important in food processing? Explain with justification.                     | 03        |
|            | <b>(b)</b> | Explain the working of hammer mill with diagram.  | 04        |
|            | (c)        | Calculate the amount of cooling water required to cool a liquid food                                | 07        |
|            |            | paste at the rate 200kg/hr containing 30% solids from 80°C to 20°C in a                             |           |
|            |            | counter flow heat exchanger. The increase in temperature of water is not                            |           |
|            |            | allowed to exceed 10 <sup>o</sup> C. The specific heat of liquid food paste is 3.0 and              |           |
|            |            | water is 4.2kJ/kgK.   |           |
| <b>Q.5</b> | (a)        | What are mega food parks?   | 03        |
|            | <b>(b)</b> | What are the methods for the evaluation of food quality? Explain any                                | 04        |
|            |            | one of them.  |           |
|            | (c)        | What is food spoilage? What are the major causes of food spoilage?                                  | <b>07</b> |
|            |            | Explain the chemical causes of food deterioration.  |           |
|            |            | OR  |           |
| <b>Q.5</b> | (a)        | Explain the usages of steam table. Describe the stepwise procedure for                              | 03        |
|            |            | the formation of superheated steam.   |           |
|            | <b>(b)</b> | The temperature of three different food products A, B and C of equal                                | 04        |
|            |            | mass are 12, 19 and 28 <sup>o</sup> C respectively. The temperature when A and B                    |           |
|            |            | are mixed is 16°C and when B and C are mixed is 23°C, what would be                                 |           |
|            |            | the temperature when A and C are mixed.   |           |
|            | <b>(c)</b> | Define the process of diffusion. Discuss the applications of diffusion in                           | <b>07</b> |
|            |            | food industry.  |           |
