

**GUJARAT TECHNOLOGICAL UNIVERSITY****BE - SEMESTER-IV(NEW) – EXAMINATION – SUMMER 2019****Subject Code:2141905****Date:09/05/2019****Subject Name: Complex Variables and Numerical Methods****Time:02:30 PM TO 05:30 PM****Total Marks: 70****Instructions:**

1. Attempt all questions.
2. Make suitable assumptions wherever necessary.
3. Figures to the right indicate full marks.

- Q.1**
- (a) State De'Moivre's. Find $\arg [i / (-2 - 2i)]$. 03
- (b) Define the operators Δ , ∇ and E . Prove that $E\nabla = \Delta$. 04
- (c) State Cauchy – Riemann Equations. Show that 07
- (i) $f(z) = \sin z$ is everywhere analytic
- (ii) $f(z) = xy + iy$ is nowhere analytic.

- Q.2**
- (a) State the formula for $\sin^{-1} z$. Find $\sin^{-1}(-i)$ 03
- (b) Find analytic function $f(z) = u + iv$, if $u = 2x(1 - y)$. 04
- (c) Classify the singularities of the analytic function. 07
- In each of the following case, identify the singular point and its type with justification.
- (i) $z^2 / (z + 1)$ (ii) $\sin z / z$ (iii) $(1 - \cosh z) / z^3$

OR

- (c) Use residues to evaluate the improper integral: 07

$$\int_0^{\infty} \frac{x^2 dx}{(x^2 + 1)(x^2 + 4)}$$

- Q.3**
- (a) Evaluate the integral $\int_C \bar{z} dz$, when C is the right-hand half 03
- $z = 2e^{i\theta} (-\pi/2 \leq \theta \leq \pi/2)$, of the circle $|z| = 2$ from $-2i$ to $2i$.
- (b) Show that the mapping by $w = 1/z$ transforms circles and lines into circles and 04
- lines.
- (c) Give two Laurent series expansions in powers of z for the function 07
- $f(z) = 1/[z^2(1 - z)]$ and specify the regions in which those expansions are valid.

OR

- Q.3**
- (a) Find the bilinear transformation which transforms $z_1 = \infty, z_2 = i, z_3 = 0$ into 03
- $w_1 = 0, w_2 = i, w_3 = \infty$.
- (b) Determine and sketch the region : 04
- (i) $0 \leq \arg z \leq \pi/4$, (ii) $|2z + 3| > 4$,
Which of them are domains?
- (c) State the Cauchy's Integral Formula and its extension. Hence evaluate integral 07
- $\int_C \frac{z+4}{z^2-2z+5} dz$, where C is circle $|z+1+i|=2$.

- Q.4** (a) Evaluate $\int_3^7 x^2 \log x \, dx$ taking four sub-intervals by trapezoidal rule. **03**
- (b) Apply Bisection method to find a real root of the equation $2x^3 - 5x + 1 = 0$ correct to 2 decimal places. **04**
- (c) Given $f(1)=22$, $f(2)=30$, $f(4)=82$, $f(7)=106$, $f(12)=206$, find $f(8)$ using Lagrange's interpolation formula. **07**

OR

- Q.4** (a) The velocity of a car (running on a straight road) at intervals of 2 minutes are given below. **03**

Time (in min.):	0	2	4	6	8	10	12
Velocity (in km/hr):	0	22	30	27	18	7	0

Apply Simpson's $1/3^{\text{rd}}$ rule to find the distance covered by the car.

- (b) Newton Raphson method find a root of the equation $x \sin x + \cos x = 0$ correct to four decimal places (taking initial guess $x_0 = \pi$). **04**
- (c) State Strling's Interpolation formula. **07**
- Interpolate by means of Gauss' forward formula the population for the year 1936 given the following data:

Year:	1901	1911	1921	1931	1941	1951
Population (1000s)	12	15	20	27	39	52

- Q.5** (a) Using secant method find a real root of the equation $x^3 - 5x + 1 = 0$ up to three iterations. **03**
- (b) Use Runge-Kutta method to solve $y' = xy$, $y(0)=1$, for $x = 0.2$, with $h=0.1$. **04**
- (c) Using Gauss-Seidel method to solve the following system correct to 3 decimal places: $83x + 11y - 4z = 95$, $7x + 52y + 13z = 104$, $3x + 8y + 29z = 71$. **07**

OR

- Q.5** (a) Solve $x \log_{10} x = 1.2$ by Regula Falsi method correct to two decimal places. **03**
- (b) Solve $y' = 1 - y$, $y(0) = 0$ in $[0, 0.3]$ by modified Euler's method taking $h = 0.1$. **04**
- (c) Find the largest eigenvalue and corresponding eigenvector using power method, for **07**

$$A = \begin{bmatrix} 4 & 4 & 2 \\ 4 & 4 & 1 \\ 2 & 1 & 8 \end{bmatrix}, \text{ taking } X_0 = \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix}.$$
