GUJARAT TECHNOLOGICAL UNIVERSITY

BE - SEMESTER-VII (NEW) EXAMINATION - WINTER 2018

Subject Code: 2170407 Date: 26/11/2018

Subject Name: Biochemical Engineering-I

Time: 10:30 AM TO 01:00 PM Total Marks: 70

Instructions:

1. Attempt all questions.

- 2. Make suitable assumptions wherever necessary.
- 3. Figures to the right indicate full marks.

MARKS 03

04

07

- **Q.1** (a) Define the terms: Respiratory quotient, Yield, Growth rate limiting reaction.
 - (b) Discuss the sterilization of air for the fermentation operation.
 - (c) A fermenter containing microbial culture at 30 0 C is used for production of microbial insecticide with its 20-litre capacity. $K_{L}a$ is to be determined. Air flow is shut off for few minutes and DO level drops the air supply is then reconnected. When steady state is established, the DO tension is 77% air saturation.

The following results are obtained.

	T_1	T_2
Time	5	15
Oxyge	50	66
n		
tension		

Where, C_{AL} = final steady DO concentration and C_{AL} = DO Concentration. (a) Estimate K_{La} . (b) An error is made determining steady state oxygen level, which instead of 77% is taken as 69%, what

Q.2 (a) How do the analogy exists between mass and heat transfer?

03

(b) Discuss the basic steps for designing of a bioreactor.

- 04 07
- (c) The fungus *Aureobasidium pullulans* is used to produce extracellular polysaccharides by fermentation of sucrose. After 120h fermentation, the following measurements of shear stress and shear rate were made with a rotating cylinder viscometer.

Shear Stress dyn cm ⁻²	Shear Rate s ⁻¹
44.1	10.2
235.3	170
357.1	340
457.1	510
636.8	1020

- [1] Plot the rheogram for this fluid.
- [2] Determine the appropriate Non Newtonian parameters.
- [3] find the apparent viscosity at the shear rates of; 15 s^{-1} and 200 s^{-1} .

OR

(c) A bacterium converts ethanol to acetic acid under aerobic conditions. A continuous fermentation process for vinegar production is proposed using non-viable bacterial cells immobilized on the surface of gelatin beads. The production target is 2 kg h⁻¹acetic acid; however the maximum acetic acid

07

FirstRanker.com

Firstrankeoncentration tolerated www.firstranker.com

Firstrankeoncentration tolerated www.firstranker.com a rate of 200 mmol h⁻¹.

- (a) What minimum amount of ethanol is required?
- (b) What minimum amount of water must be used to dilute the ethanol to avoid acid inhibition?

(a) (b) (c) (a) (b) (c) (a) (b) (b)	Enlist the energy concerns from heat transfer point of view for a bioreactor. Write about Non- Newtonian fluids with suitable equations. Explain each of them for its stress and strain relation analogous to the law of viscosity. OR Discuss the dynamic method to determine K_L a. Enlist the enzymes which are medical importance. Discuss the practical considerations for bioreactor constructions. Write a note on: Orifice and Nozzle spargers Discuss aseptic operation by giving schematic to show operating procedures. Explain the concept of air lift bioreactor. Compare it with fluidized bed bioreactor. OR What is the importance of modeling? Where and how does it help in fermentation plants?	04 07 03 04 07 03 04 07
(a) (b) (c) (a) (b) (c)	Write about Non- Newtonian fluids with suitable equations. Explain each of them for its stress and strain relation analogous to the law of viscosity. OR Discuss the dynamic method to determine K _L a. Enlist the enzymes which are medical importance. Discuss the practical considerations for bioreactor constructions. Write a note on: Orifice and Nozzle spargers Discuss aseptic operation by giving schematic to show operating procedures. Explain the concept of air lift bioreactor. Compare it with fluidized bed bioreactor. OR What is the importance of modeling? Where and how does it help in fermentation plants?	03 04 07 03 04 07
(a) (b) (c) (a) (b) (c)	them for its stress and strain relation analogous to the law of viscosity.	04 07 03 04 07
(b) (c) (a) (b) (c)	Discuss the dynamic method to determine K_L a. Enlist the enzymes which are medical importance. Discuss the practical considerations for bioreactor constructions. Write a note on: Orifice and Nozzle spargers Discuss aseptic operation by giving schematic to show operating procedures. Explain the concept of air lift bioreactor. Compare it with fluidized bed bioreactor.	04 07 03 04 07
(b) (c) (a) (b) (c)	Enlist the enzymes which are medical importance. Discuss the practical considerations for bioreactor constructions. Write a note on: Orifice and Nozzle spargers Discuss aseptic operation by giving schematic to show operating procedures. Explain the concept of air lift bioreactor. Compare it with fluidized bed bioreactor. OR What is the importance of modeling? Where and how does it help in fermentation plants?	04 07 03 04 07
(c) (a) (b) (c)	Discuss the practical considerations for bioreactor constructions. Write a note on: Orifice and Nozzle spargers Discuss aseptic operation by giving schematic to show operating procedures. Explain the concept of air lift bioreactor. Compare it with fluidized bed bioreactor. OR What is the importance of modeling? Where and how does it help in fermentation plants?	07 03 04 07
(a) (b) (c)	Write a note on: Orifice and Nozzle spargers Discuss aseptic operation by giving schematic to show operating procedures. Explain the concept of air lift bioreactor. Compare it with fluidized bed bioreactor. OR What is the importance of modeling? Where and how does it help in fermentation plants?	03 04 07
(b) (c) (a)	Discuss aseptic operation by giving schematic to show operating procedures. Explain the concept of air lift bioreactor. Compare it with fluidized bed bioreactor. OR What is the importance of modeling? Where and how does it help in fermentation plants?	04 07 03
(c) (a)	Explain the concept of air lift bioreactor. Compare it with fluidized bed bioreactor. OR What is the importance of modeling? Where and how does it help in fermentation plants?	07
(a)	OR What is the importance of modeling? Where and how does it help in fermentation plants?	03
	What is the importance of modeling? Where and how does it help in fermentation plants?	
	fermentation plants?	
(b)		
	Explain the measurement of DO concentrations.	04
(c)	Justify the statement: "Chemostate culture evaluates the kinetic and yield parameters."	07
(a)	Derive equation to narrate death kinetics of cell culture.	03
(b)	How cells grow? Which factors affect?	04
		07
(0)		0,
(a)		03
` ′	·	
(c)	Write the transfer of oxygen from gas bubbles to cell.	07

	MAN FIRST P. 21	
	(b) (c) (a) (b)	 (a) Derive equation to narrate death kinetics of cell culture. (b) How cells grow? Which factors affect? (c) Define bioprocess engineering. Explain the role of biotechnology in that. OR (a) What are the effects of conditions on Enzyme reaction rate? (b) Write a note on: Assessing mixing effectiveness (c) Write the transfer of oxygen from gas bubbles to cell.
