According to the eco-social perspective on health, ecological interactions of the human beings and their environment lead to adaptations for health, mediated by the social and cultural structures created by human societies. Rene Dubos has defined health thus: "Health implies the relative absence of pain and discomfort and a continuous adaptation and adjustment to the environment to ensure optimal function." According to this understanding:

- A. Adaptations for health are both biological and socio-cultural
- B. Disease is a state of maladjustment of humans with the environment
- C. A healthy population requires a healthy environment and the capacity to adjust and adapt
- D. All the above
