PART A

Section Id : 128206156
Section Number : 1
Section type : online
Mandatory or Optional: Mandatory
Number of Questions: 8
Number of Questions to be attempted: 8
Section Marks: 40
Display Number Panel: Yes
Group All Questions: No

Sub-Section Number: 1
Sub-Section Id: 128206258
Question Shuffling Allowed : Yes

Question Number : 1 Question Id : 1282065533 Question Type : MCQ Option Shuffling : No Display Question Number : Yes
Single Line Question Option : No Option Orientation : Vertical
Correct Marks : 5 Wrong Marks : 0

Consider the quantum mechanical motion of a free particle of mass m in a one-dimensional box of length L . What is the expectation value of its kinetic energy in the state with wave function $\psi(x) = Cx(L-x)$ where C is a constant of normalization?

- (A) $(h^2)/(mL^2)$
- (B) $(5h^2)/(4\pi^2mL^2)$
- (C) $(2h^2)/(3\pi^2mL^2)$
- (D) $(4h^2)/(3\pi^2mL^2)$

Options :

- 12820621871. A
- 12820621872. B
- 12820621873. C
- 12820621874. D

Question Number : 2 Question Id : 1282065534 Question Type : MCQ Option Shuffling : No Display Question Number : Yes
 Single Line Question Option : No Option Orientation : Vertical
 Correct Marks : 5 Wrong Marks : 0

Consider a system of three interacting spins S_1 , S_2 and S_3 – each of which can have values $+1$ and -1 . The Hamiltonian is given by $H = -J(S_1S_2 + S_2S_3 + S_1S_3)$. If T is the temperature and k_B is the Boltzmann constant, define $\beta = 1/k_BT$. What is the thermally averaged value of $(S_1 S_2 + S_3)$?

- (A) $(\exp(4\beta J)-1)/(\exp(4\beta J)+3)$
- (B) $\exp(3\beta J)/(\exp(3\beta J)+2)$
- (C) $(\exp(3\beta J)+3)/(\exp(3\beta J)+5)$
- (D) $\exp(4\beta J)/(\exp(4\beta J)+5)$

Options :

- 12820621875. A
- 12820621876. B
- 12820621877. C
- 12820621878. D

Question Number : 3 Question Id : 1282065535 Question Type : MCQ Option Shuffling : No Display Question Number : Yes
 Single Line Question Option : No Option Orientation : Vertical
 Correct Marks : 5 Wrong Marks : 0

er an infinite wire bent into the shape of a hairpin i.e. a semicircle of radius 1 cm connecting two semi-infinite wires(as shown in the figure) and carrying a current of 1.5 A. What is the strength of the magnetic field at the centre of the semicircle in the unit of Tesla?

- (A) 1.3×10^{-7}
- (B) 2.9×10^{-5}
- (C) 7.7×10^{-5}
- (D) 4.6×10^{-6}

Options :

- 12820621879. A
- 12820621880. B
- 12820621881. C
- 12820621882. D

Question Number : 4 Question Id : 1282065536 Question Type : MCQ Option Shuffling : No Display Question Number : Yes

Atwood's machine shown here the pulley of negligible mass is suspended from a spring balance with a spring constant of 2000 N/m . Two bodies, of mass 1 kg and 3 kg , are hanging from the two ends of the massless and frictionless rope passing over the pulley. When the two masses starts moving under the effect of gravity how much will the spring stretch from its length in the absence of any force?

- (A) 1.0 cm
- (B) 0.5 cm
- (C) 2.0 cm
- (D) 1.5 cm

Options :

- 12820621883. A
- 12820621884. B
- 12820621885. C
- 12820621886. D

What is the integral of the function $f(z) = 1/(z^2 - z)$ in the complex plane around the circle of radius 2 with the origin at its centre (The direction of integration is positive)?

- (A) 0
- (B) $2i\pi$
- (C) $-2i\pi$
- (D) 4π

Options :

- 12820621887. A
- 12820621888. B
- 12820621889. C
- 12820621890. D

Correct Marks : 5 Wrong Marks : 0

Two waves are superimposed to produce a resultant wave represented by $y = a \sin(\omega t - kx) + a \sin(\omega' t - k'x)$ with $k > k'$ and $\omega > \omega'$, where k and ω are wave vector and frequency respectively. What will be their phase velocity (v) and how it is related with group velocity (u) and phase velocity (v)

- (A) $\left(\frac{\omega + \omega'}{k - k'}\right)$ and $u = v - k(dv/dk)$
 (B) $\left(\frac{\omega + \omega'}{k + k'}\right)$ and $u = v + k(dv/dk)$
 (C) $\left(\frac{\omega - \omega'}{k + k'}\right)$ and $u = v + k(du/dk)$
 (D) $\left(\frac{\omega - \omega'}{k - k'}\right)$ and $u = v - k(du/dk)$

Options :

. At the bottom of the conduction band of a semiconductor,
Corresponding to the wave-vector k_0 , the band structure is given by
 $E(k) = A |k - k_0|^2$ where A is a constant. If a magnetic field B is applied on
a sample of this semiconductor what will be the cyclotron frequency ω_c
(m is mass of electron in free space)?

- (A) $\pi eBA/2h^2$
- (B) eB/m
- (C) $eB/2m$
- (D) $8\pi^2 AeB/h^2$

Options :

A 10 V unregulated DC power source is used to make a 6 V regulated
power supply using a 6 V Zener diode. The maximum current that can be
passed through the diode is 100 mA. Then the value of the series
resistance R_Z and its wattage are:

- (A) 30 ohm and 0.3 W
- (B) 50 ohm and 0.5 W
- (C) 60 ohm and 0.6 W
- (D) 40 ohm and 0.4 W
