5) Each MCQ carries half mark.  
6) Students will not be allotted mark if he/she overwrites/ strikes or put white ink on the cross once marked on MCQ.

**C Time :- 30 Minutes****Maximum Marks :** 8**Q. 1****Total MCQs : 16****16 X ½ = 8**

- 1 Following pathogen does not satisfy Koch's postulates  
a. *Bacillus anthracis*      b. *Mycobacterium tuberculosis*      c. *Clostridium tetani*      d. *Lepra bacilli* ✓
- 2 ENT is seen in :-  
a. Lepromatous leprosy      b. Tuberculoid leprosy      c. Indeterminate leprosy      d. Pure neuritic leprosy X
- 3 Stalactite growth in ghee broth is due to :  
a. *H. influenzae*      b. *Corynebacterium diphtheriae*      c. *Y. pestis* ✓      d. *T. pallidum*
- 4 Which of the following is the mechanism of action of diphtheria toxin?  
a. Forms pores in red blood cells causing hemolysis      b. Degrades lecithin in eukaryotic cell membranes      c. Causes release of tumor necrosis factor      d. Inhibits elongation factor 2
- 5 Which of the following is an enrichment media  
a. Nutrient broth      b. Tetrathionate broth      c. Strart medium      d. Thayer Martin medium
- 6 Which of the following is most likely to be associated with the formation of a bacterial biofilms?  
a. Airway colonization in a cystic fibrosis patient with a mucoid (Alginate-producing) strain of *pseudomonas aeruginosa*      b. Urinary tract infection with *Escherichia coli*      c. Meningitis with *Neisseria meningitidis*      d. Tetanus
- 7 Commensal flora is commonly found in the :-  
a. Liver      b. Urethra      c. Kidneys      d. Salivary glands
- 8 A farmer presents to the emergency department with painful regional lymphadenopathy, history of fever and flu like symptoms. Clinical examination reveals an ulcer in leg. Which of the following stains should be used to detect suspected bipolar stained organisms  
a. Albert stain      b. Wayson's stain      c. Ziehl Neelsen stain      d. Mc Faydean's stain
- 9 Silver impregnation method is used for demonstration of:  
a. Spirochaetes      b. *Vibrio cholerae*      c. salmonella      d. Shigella
- 10 A 4 year old boy develops bloody diarrhea. Hemolytic colitis due to *Escherichia coli* O157:H7 is suspected. What medium should be inoculated to help the laboratory staff make the diagnosis of this infection?  
a. Blood agar      b. Sorbitol MacConkey agar      c. Hektoen enteric agar      d. CIN (cefotaxim, lrgasan, novobiocin) agar
- 11 Scrub typhus is transmitted by :  
a. Reduviid bug      b. Ticks      c. Enteric pathogens      d. Trombiculid mite larva
- 12 *Vibrio parahaemolyticus* food poisoning is caused by ingestion of :  
a. Eggs & Poultry      b. Catfish, shellfish products      c. Raw vegetables      d. Milk products
- 13 Which is true of enterobacteriaceae:-  
a. All are oxidase negative      b. Nitrate reduction negative      c. Glucose not fermented by all      d. Motile by polar flagellum
- 14 Chancroid is caused by
