SECTION-C

17. Case Study :

Kapil Shah (Kapil) had started investing in the share market in his mid-twenties and had seen some ups and downs over a decade. Kapil then decided to overhaul all his existing stock positions on the increasing prospects of the Narendra Modi led National Democratic Alliance coming to power in India in May 2014. On the election results day - May 16, 2014 - he bought ten stocks to ride the possible development wave agenda of the new government. However, by the end of February 12, 2016, his portfolio had generated a return of only 1.96%. Things became tough for Kapil as repayment for a loan fell due on August 22, 2016. Kapil wanted someone's help to ensure he generated good returns from his portfolio so that he could repay the loan by liquidating a part or even his complete stock portfolio. For this, he contacted Dhaval P Vyas Investment Research, one of the leading financial consultancy firms in India. Based on Kapil's profile, Dhaval P Vyas suggested that Kapil drop six underperforming stocks and purchase six stocks which he expected would perform better in the future.

Question :

What should Kapil do now?

NOTE : Disclosure of Identity by writing Mobile No. or Making of passing request on any page of Answer Sheet will lead to UMC against the Student.
