Total No. of Questions: 18

## B.Tech. (BT) (2018 Batch) (Sem.-3) BIOSTATISTICS <br> Subject Code : BTBT301-18 <br> M.Code : 76945

Time : 3 Hrs.
Max. Marks: 60

## INSTRUCTIONS TO CANDIDATES :

1. SECTION-A is COMPULSORY consisting of TEN questions carrying TWO marks each.
2. SECTION-B contains FIVE questions carrying FIVE marks each and students have to attempt any FOUR questions.
3. SECTION-C contains THREE questions carrying TEN marks each and students have to attempt any TWO questions.

## SECTION-A

Answer briefly :

1. What is ratio scale data?
2. Differentiate between population and sample.
3. Define median.
4. What is coefficient of variation?
5. ${ }_{8} \mathrm{P}_{5}=$ $\qquad$ .
6. Define kurtosis of a distribution.
7. Differentiate between one-tailed and two-tailed statistical hypothesis testing.
8. What is Fisher exact test?
9. What is Kruskal-Wallis test?
10. What is difference between negative, positive and zero correlation?
www.FirstRanker.com

## SECTION-B

11. Differentiate between frequency distribution and cumulative frequency distribution? How will you graphically represent them?
12. Determine the arithmetic mean and mode of the following data : 7, 13, 9, 12, 8, 8, 7, 8, $13,6,10,8,8,12,9,12,8,12,11,12$.

Also write the importance of these two measures of central tendencies.
13. What is the probability of selecting at random a card of diamond or a king from a wellshuffled deck of playing cards?
14. If in a binomial population, $p=0.22$ and $n=5$, what is the probability of $X=4$ ?
15. Perform paired sample t-test to test the null hypothesis that the left foreleg and left hindleg of deer are equal. The data consisting of left hindleg and left foreleg lengths (cm) are as follows :

| Deer | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Hindleg Length | 142 | 140 | 144 | 144 | 142 | 146 | 149 | 150 | 142 | 148 |
| Foreleg Length | 138 | 136 | 147 | 139 | 143 | 141 | 143 | 145 | 136 | 146 |

## SECTION-C

16. Find out linear regression equation of $y$ on $x$ using following data of heights (in inches) of fathers and their adult sons :

| Adult son (y) | 68 | 66 | 68 | 65 | 69 | 66 | 68 | 65 | 71 | 67 | 68 | 70 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Father(x) | 65 | 63 | 67 | 64 | 68 | 62 | 70 | 66 | 68 | 67 | 69 | 71 |

17. Using the following data, perform Mann-Whitney test to test the null hypothesis that male and female turtles have the same mean cholesterol concentrations ( $\mathrm{mg} / 100 \mathrm{ml}$ ) :

| Male | 244 | 248 | 236 | 232 | 251 | 245 | 254 | 256 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Female | 232 | 240 | 244 | 244 | 234 | 230 | 226 |  |

18. a) Describe ANOVA and discuss in which situation ANOVA test is applied.
b) Six samples of each of the five water bodies were analyzed for strontium concentration in the water bodies and ANOVA test was performed. Based on following information determine if the strontium concentration of five different water bodies is same at 0.05 level of significance.

Total sum of squares $=2437.572$ and Group sum of squares $=2193.442$

NOTE : Disclosure of Identity by writing Mobile No. or Making of passing request on any page of Answer Sheet will lead to UMC against the Student.
