Code: 17FBS101

## MCA I Semester Supplementary Examinations June/July 2018

PROBABILITY \& STATISTICS
(For students admitted in 2017 only)
Time: 3 hours
Max. Marks: 60

## Answer all the questions

1 (a) In a factory machine A produce $40 \%$ of the output and machine B produces $60 \%$ on the average, 9 items in 1000 produced by A are defective and 1 item in 250 produced by $B$ is defective. An item drawn at random from a day's output is defective. What is the probability that it was produced by A or B?
(b) Two dice are thrown. Let $X$ assign to each point $(a, b)$ in $S$ the maximum of its numbers be $X(a, b)=\max .(a, b)$. Find the probability distribution. $X$ is a random variable with $X(s)=\{1,2,3,4,5,6\}$. Also find the mean and variance of the distribution.

OR
2 (a) Derive mean of binomial distribution.
(b) The marks obtained in statistics in a certain examination found to be normally distributed. If $15 \%$ of the students $\geq 60$ marks. $40 \%<30$ marks. Find the mean and standard deviation.

3 (a) In a sample of 1000 people in Karnataka 540 are rice eaters and the rest are wheat eaters. Can we assume that both rice and wheat are equally popular in this state at $1 \%$ level of significance?
(b) A sample of 400 items is taken from a population whose standard deviation is 10 . The mean of the sample is 40 . Test whether the sample has come from a population with mean 38 . Also calculate $95 \%$ confidence interval for the population.

## OR

4 (a) The measurements of the output of two units have given the following results. Assuming that both samples have been obtained from the normal population at 10\% significant level test whether the two populations have the same variance.

| Unit - A | 14.1 | 10.1 | 14.7 | 13.7 | 14.0 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Unit - B | 14.0 | 14.5 | 13.7 | 12.7 | 14.1 |

(b) Two random samples gave the following results.

| Sample | Size | Sample mean | Sum of squares of <br> deviation from the <br> mean |
| :---: | :---: | :---: | :---: |
| 1 | 10 | 15 | 90 |
| 2 | 12 | 14 | 108 |

Test whether the samples came from the same normal population.
5 Three different machines are used for a production on the basis of the outputs, test whether the machines are equally effective.

| Outputs |  |  |
| :---: | :---: | :---: |
| Machine 1 | Machine 2 | Machine 3 |
| 10 | 9 | 20 |
| 5 | 7 | 16 |
| 11 | 5 | 10 |
| 10 | 6 | 4 |

6 (a) Explain Latin Square Design.
(b) Write down the Anova table for two-way classification.

Code: 17FBS101

7 (a) Explain the terms chance cause and assignable cause.
(b) The following data gives reading 10 samples of size 6 each certain component.

| Sample | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mean $\bar{X}$ | 383 | 508 | 505 | 582 | 557 | 337 | 514 | 614 | 707 | 753 |
| Range R | 95 | 128 | 100 | 91 | 68 | 65 | 148 | 28 | 37 | 80 |

Draw control charts for $\bar{X}$ (for $\mathrm{n}=6, \mathrm{~A}_{2}=0.483$ ) and your conclusion.

## OR

The following are the figures of detectives in 22 lots each containing 2,000 rubber belts: 425, 430, $216,341,225,322,280,306,337,305,356,402,216,264,126,409,193,326,280,389,451,420$. Draw control charts for fraction defective and comment on the state of control of the process.

9 (a) Write Normal equation to fit the curve $\mathrm{y}=\mathrm{ae}^{\mathrm{x}}$.
(b) Fit a second degree polynomial for the following data:

| x | 10 | 12 | 15 | 23 | 20 |
| :---: | :--- | :--- | :--- | :--- | :--- |
| y | 14 | 17 | 23 | 25 | 21 |

OR
10 Calculate the correlation coefficient for the data:

| x | 65 | 66 | 67 | 67 | 68 | 69 | 70 | 72 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| y | 67 | 68 | 65 | 68 | 72 | 72 | 69 | 71 |
