**B. TECH.** 

## **THEORY EXAMINATION (SEM-IV) 2016-17**

# MEASUREMENT AND METROLOGY

### Time : 3 Hours

*Note* : Be precise in your answer. In case of numerical problem assume data wherever not provided.

### SECTION – A

#### 1. Attempt all parts of the following questions:

- What is meant by static response? (a)
- **(b)** Define interchangeability.
- (c) Mention any four precautions to be taken while using slip gauges.
- (**d**) What is progressive error in screw gauge?
- **(e)** Define limit and tolerance.
- **(f)** Name any four instruments used for temperature measurement.
- Distinguish between force and torque. **(g)**
- What is comparator? **(h)**
- (i) Define straightness.
- (j) What are the chances of errors using sine bars?

### **SECTION - B**

#### 2. Attempt any five of the following questions:

- Give the structure of generalized measuring system and explain it in detail. **(a)**
- Explain in detail various types of errors that may arise in engineering measurements. **(b)**
- Explain with a neat sketch the construction and working of sigma comparator. (c)
- **(d)** Explain the working principle of AC laser interferometer and explain how the straightness is measured?
- Explain how V-Block and three point probe are used for measurement of roundness. **(e)** What are the limitations of V-Block?
- **(f)** Describe with neat sketch the measurement of pitch of internal and external threads using a pitch measuring machine
- With a sketch explain the displacement measurement using Linear Variable Differential **(g)** Transformer (LVDT)
- Explain the Taylor's principle of gauge design. Define ring gauge and plug gauge. **(h)**

### **SECTION - C**

#### Attempt any two of the following questions:

- 3 Describe with neat sketches:
  - (i) Thermocouples
  - (ii) Strain gauge torque meter
- Describe the followings in connection with pressure measurement: 4
  - Piezo-electric pressure transducer. (i)
  - (ii) Variable capacitance transducer.
- 5 (i) Explain with a neat sketch how a vernier caliper is used for linear measurements.
  - Why is sine bar not suitable for measuring angle above  $15^{\circ}$ . (ii)

#### www.FirstRanker.com

 $10 \ge 2 = 20$ 

 $5 \ge 10 = 50$ 

 $2 \ge 15 = 30$ 

Max. Marks : 100
