B. Tech.

**(SEM. IV) THEORY EXAMINATION, 2014-15
ELECTROMAGNETIC FIELD THEORY (EMFT)**

Time : 2 Hours]

[Total Marks : 50

- 1 Attempt any four question. All parts carry $3.5 \times 4 = 14$ equal marks.
 - (a) State divergence theorem and Stroke theorem.
 - (b) Explain the physical interpretation of curl.
 - (c) Convert the Cartesian coordinate system into cylindrical coordinate system.
 - (d) Transform the point $P(1,1,6)$ in spherical coordinate system.
 - (e) Explain the gradient of a scalar field. Also explain its physical interpretation.
 - (f) Write the laplace equation in all three coordinate system.
- 2 Attempt any two questions. All Question carry $6 \times 2 = 12$ equal marks.
 - (a) Find the potential function and electric field intensity for the region between two concentric right circular cylinder where $V=V_0$ at $r=a$ and $V=0$ at $r=b$ ($b>a$)?

131407]

1

[Contd...

- (b) Find the electric field intensity due to infinitely long charged wire(line charge).
- (c) Derive Energy Density in electrostatic field.
- 3** Attempt **any two** questions. All Question carry **6×2=12** equal marks.
- (a) State and explain maxwell's equations in differential and integral form.
- (b) Explain magnetic boundary conditions.
- (c) State and explain Bio savart law. Derive magnetic field intensity due to infinitely long wire carrying current I.
- 4** Attempt **any two** questions. All Question carry **6×2=12** equal marks.
- (a) Find the value of α, β , for good conductors. Show that angle of characteristic impedance is always 45° for good conductors.
- (b) Derive the mathematical expression for poynting theorem.
- (c) Find the expression for α, β, γ , for lossless or perfect dielectric medium. A 10 GHZ plane wave traveling in free space has an amplitude of $E_x=10$ V/m. Find V, η, β, λ and the amplitude of H.
