(Following Paper ID and Roll No. to be filled in your

Answer Books)

B.TECH

Paper ID: 2012279

Roll No.

Regular Theory Examination (Odd Sem -V), 2016-17

DATABASE MANAGEMENT SYSTEM (DBMS)

Time: 3 Hours

Max. Marks: 100

Section - A

Attempt all parts . All parts carry equal marks.

Write answer of each part in short. (10×2=20)

- What is data model? List the types of data model used.
- Give example for one to one and one to many relationship.

 With an example show how a referential integrity can be implemented.

2

- <u>:</u> L <u>6</u> Why is concurrency control needed? State the properties of transaction. What is serializability? How it is tested?
- Define timestamp.

Section - B

Attempt any five questions from this section. $(5 \times 10 = 50)$

,

<u>a</u>

manager-name). employee (employee-name, street, city works Consider the following relational database (company-name, city) manages (employee-name (employee-name, company-name, salary) company

Give an expression in SQL to express each of the following queries:

- Ξ: Find the names and cities of residence of all Find the names, street address, and cities of employees who work for XYZ bank
- Ξ Find the names of all employees in this company for which they work. database who live in the same city as the

Bank and earn more than Rs. 10,000 per annum residence of all employees who work for XYZ

NCS-502

ত্র Discuss about the deadlock prevention schemes.

NCS-502

Explain the differences between physical level, conceptual level and view level of data abstraction.

೦

Explain embedded SQL and dynamic SQL in detail.

٩

- <u>e</u> Describe shadow paging recovery technique.
- Write down in detail about deadlock and serializability.

Section - C

Note: Attempt any 2 questions from this section. $(2 \times 15 = 30)$

a) operation. What are the relational algebra operations supported in SQL? Write the SQL statement for each

ψ.

ত্ৰ Draw an E-R diagram for a small marketing company database, assuming your own data requirements.
