## B. TECH.

## Theory Examination (Semester-VIII) 2015-16

## **OPERATIONS RESEARCH**

Time: 3 Hours Max. Marks: 100

## Section-A

- 1. Attempt all parts. All parts carry equal marks. Write answer of each part in short.  $(2\times10=20)$ 
  - (a) Discuss simplex and convex set with respect to LPP.
  - (b) Explain the concept of alternate optima in LPP.
  - (c) What is degeneracy in TP?
  - (d) What is curse of dimensionality?
  - (e) Why we use dominance property?
  - (f) How can we solve problems with risk?
  - (g) What are different techniques of selective inventory control?
  - (h) When we need simulation?

(1) P.T.O.

machines.

MMM.FirstRanke.

Firstranker's choice b) Use dual simple with this to ache the LPP model given. FirstRan below: com (10)

Max 
$$Z = 3x_1 - x_2$$
  
Subject to,  $X_1 + X_2 \ge 1$ 

$$2x_1 + 3x_2 \ge 2$$

$$x_1, x_2 \ge 0$$

(a) What do you understand by simulation? Discuss different methods for generation of rando numbers.

(5)

(b) The demand for a certain product has a rectangular distribution between 4000 and 5000. Find the optimal order quantity, if the storage cost is Rs 1 per unit and shortage cost is Rs 7 per unit. (10)
