**B. Tech.**

(SEM. VIII) THEORY EXAMINATION, 2014-15

**NON CONVENTIONAL ENERGY RESOURCES**

Time : 3 Hours]

[Total Marks : 100

Note : (1) Attempt all questions.  
(2) Be precise in your answer.

1 Attempt any two parts of the following :  $10 \times 2 = 20$

- What are conventional and non-conventional energy resources ? Discuss the prospects of non-conventional energy sources in India.
- Describe the principle of solar photovoltaic energy conversion. Classify solar cells. What are the materials used in solar cells ? Also discuss the factors that limit the efficiency of the solar cells.
- What is MNRE ? What are the mission and functions of it ? Define and explain renewable and non-renewable energy resources. Mention at least one energy resources in each category.

[ Contd...

2 Attempt any two parts of the following : 10×2=20

- (a) Describe the various methods of solar radiation measurement. How can we measure all (direct, diffuse and global) radiations with the help of Pyranometer ?
- (i) Calculate the angle of declination for 5th May of a leap year.
- (ii) Calculate the hour angle at the time 8.15 p.m.
- (b) With the help of a neat diagram explain the zenith angle and altitude angle in respect of solar radiation analysis.
- (c) Discuss the principle of a concentrating solar collector. How it differs with flat plate collector ? How collector coating can be used to improve the performance of collector with reference to the flat plate collector ? What is the concentrating ratio for focusing collector ?

3 Attempt any four parts of the following : 5×4=20

- (a) What is geothermal energy ? Discuss different systems used for generating the power using geothermal energy.
- (b) Give the principle of MHD power generator. Explain in detail, the closed MHD system.

199851] 2 [Contd...

4 Attempt any two parts of the following : 10×2=20

- (c) How many ways we can store solar energy ? Explain in brief about thermal energy storage and mechanical energy storage.
- (d) What is fuel cell ? Differentiate between AFC and PEMFC.
- (e) Discuss the difference between a geothermal power plant and thermal power plant. Categories, the various resources of geothermal energy.
- (a) Explain the working of thermoelectric generator. Differentiate between thermoelectric and thermionic conversion system.
- (b) Describe with a neat sketch, the working of a WECS with main components. What are the main factors to be considered for the selection of a site for wind generators ?
- (c) Briefly describe :
- (i) Seebach effect
- (ii) Peltier effect

199851] 3 [Contd...

5 Attempt any two parts of the following : 10×2=20

- Explain the basic principle of Ocean Thermal Energy Conversion (OTEC). How can tidal power be utilized for the benefits of mankind ?
- What are tides ? How they are formed ? Discuss the functioning of a tidal power plant.
- Describe the factors that affects the size of biogas plant and the materials used for biogas generation.
