Preface

With the emergence of core challenges related to the environment each day, there is a great need to increase public awareness about these issues. This can be achieved through Environmental Education that aims to impart sensitivity by developing knowledge, values, positive attitude, actions needed to protect and improve the environment and conserve natural resources through Environmental Education.

Environmental Education is a process, a life-long learning, that will mould environmentally vigilant citizens, who take appropriate decisions affecting their environment. Introducing Environmental Education at the primary level will help nurture the right attitude towards the environment right from childhood. It also raises awareness among young students and prepares them for the various environmental challenges they would face in the future as a result of global warming.

The Teacher's Manual on Environmental Education for Class I to V, comprises of various activities that provide meaningful experience to the students about their environment. The activities are based on themes such as, Soil, Air, Water, Energy, Biodiversity, Waste Management etc., related to the environment. These activities would help cultivate critical-thinking, decision-making and problem-solving skills among the students. The Manual provides an opportunity to the students to further explore and understand the environment they are living in.

I appreciate the Committee for their efforts in bringing out this Manual. I also extend my thanks to Dr. Sadhana Parashar, Professor and Director (Academic, Research, Training and Innovation) for the valuable guidance and inspiration that have helped in making this Manual possible. Any suggestions for further improvement of the Manual are most welcome.

Introduction

"Earth provides enough to satisfy every man's needs, but not every man's greed."

-Mahatma Gandhi

Environmental Education is a learning process that increases people's knowledge and awareness about their environment and associated challenges, develops the necessary skills and expertise to address the challenges, and fosters attitudes, motivations, and commitments to make informed decisions and take responsible action (UNESCO, Tbilisi Declaration, 1978).

India, like other developing nations, depends primarily upon its natural resources for development. This whole process, sometimes, leads to the exploitation of nature and its resources, which may again result in serious environmental problems. Considering the significance of this issue, proper initiatives need to be developed, that may be achieved through making Environmental Education a part of the teaching-learning system.

The main goal of Environmental Education is to develop the knowledge, skills, awareness, attitudes and values among individuals and communities towards their environment, so that, they are able to take proper decisions which may affect the environment.

Environmental Education basically aims at:

- ★ **Awareness:** To make students aware and sensitive about the environment and environmental issues.
- ★ **Knowledge:** To help students develop an understanding about the environment
- ★ **Attitudes and Values:** To develop an attitude of concern and values for the environment and a sense of responsibility for maintaining the quality of environment.
- ★ **Skills:** To help students acquire the skills that may help in solving the environmental problems.
- ★ **Participation:** To develop the ability of youth to be involved and utilize their knowledge for solving environment related problems.

At the primary level, there is a great need to sensitise and motivate the students about the core environmental issues, so that, they are well prepared to counter these challenges.

Realising the importance of Environmental Education for the primary classes, the Board has introduced the Teacher's Manual for classes I-V for Environmental Education. The Manual consists of activities that relate well to the primary level students and can be performed using simple tools and techniques. Each activity at the end is being supplemented by a worksheet for students that is designed to reinforce, integrate and apply the concepts that they have learnt.

I sincerely hope the Manual will achieve the purpose of bringing Environmental Education into the larger curriculum of schools.
