

B.Tech III Year I Semester (R13) Supplementary Examinations June 2016

# LINEAR & DIGITAL IC APPLICATIONS

(Electrical and Electronics Engineering)

Max. Marks: 70

Time: 3 hours

PART – A

(Compulsory Question)

\*\*\*\*

- 1 Answer the following: (10 X 02 = 20 Marks)
  - (a) Assuming the OP-AMP to be ideal, the voltage gain of the amplifier shown below is

- (b) How does negative feedback compensate for a decrease in open loop gain?
- (c) An astable multi vibrator circuit using IC 555 timer is shown below. Assume that the circuit is oscillating steadily, find the voltage V<sub>C</sub> across the capacitor varies between.

- (d) Calculate the values of the LSB, MSB and Full scale output for an 8-bit DAC for the 0 to 10 V.
- (e) The op-amp circuit shown in figure is a filter. The type of filter and it's cutoff frequency respectively

- (f) What is an all pass filter? Where and why it is needed?
- (g) When do we prefer open collector TTL gate?
- (h) Which is fastest logic gate and why?
- (i) Why asynchronous inputs are required in flip-flops?
- (j) Write about serial binary adder.

#### PART – B

#### (Answer all five units, 5 X 10 = 50 Marks)

- 2 Derive an expression for the output voltage and gain of a non-inverting op-amp. (a)
  - The output voltage of the regulated power supply shown in figure is: (b)

- OR
- 3 Show that input impedance of a non-inverting op-amp of figure below is:  $R_{if} = R_i \left(1 + \frac{R_1}{(R_1 + R_2)} A_\nu\right)$ . Where  $R_i$ (a) is input resistance of an op-amp and  $A_{v}$  is open loop gain and output resistance  $R_{0} = 0$ .

(b) What is the purpose of sample and hold circuit? Explain the working principle of sample and hold circuit using an op-amp.

UNIT – II

Configure a 555 timer as a Schmitt trigger and explain. Mention some of its applications.

#### OR

- Explain frequency translation and FSK demodulation using 565 PLL. 5 (a)
  - An 8-bit ADC is capable of accepting an input unipolar (positive values only) voltage 0 to 10 V. Find what the (b) minimum value of 1LSB is & what is the digital output code if the applied input voltage is 5.4V?

# UNIT – III

(a) Derive an expression for the transfer function of a second order low pass Butterworth filter. 6

Explain VCO? Mention applications of it.

### OR

- 7 Explain the terms: (i) Roll of factor. (ii) Damping coefficient. (a)
  - Explain, how to obtain triangular wave using a square wave generator? (b)

### UNIT – IV

- Differentiate different logic families and mention their advantages and disadvantages. 8 (a)
  - Describe TTL driving CMOS and CMOS driving TTL, interfacing techniques. (b)

# OR

Draw the circuit of Totem-pole TTL NAND gate. What is the purpose of using a diode at the output? (a) Design a TTL three state NAND gate and explain the operation. (b)

# UNIT – V

- What is a decoder? Explain 3 to 8 line decoder with its truth table. 10 (a) (b)
  - Design a 3-bit binary synchronous counter.

#### OR

- What is parity generator? Explain the 3-bit even parity generator. 11 (a)
  - Explain different types of shift registers. (h)
