

Code No: RT32044 (R13) (SET - 1

III B. Tech II Semester Supplementary Examinations, November- 2017 MICROWAVE ENGINEERING

(Electronics and Communication Engineering)

Time: 3 hours Max. Marks: 70

Note: 1. Question Paper consists of two parts (Part-A and Part-B)

- 2. Answering the question in **Part-A** is compulsory
- 3. Answer any **THREE** Questions from **Part-B**

		PART –A	
1	a)	What are the various applications of microwave frequencies?	[4M]
	b)	Derive the expression of a Quality factor of rectangular cavity resonators.	[4M]
	c)	Explain scattering parameters in microwave components.	[4M]
	d)	Explain the bunching process in reflex klystron.	[4M]
	e)	Write the difference between TWT and klystron amplifier.	[3M]
	f)	What are methods present in the microwave power measurement?	[3M]
<u>PART -B</u>			
2	a)	Derive the wave equation for a TM wave and obtain all the field components in a rectangular wave guides.	[8M]
	b)	A 10GHz signal is to be propagated through a rectangular waveguide. Calculate the dimensions of the waveguide, guide wavelength and phase velocity, for dominant mode of propagation.	[8M]
3	a)	A Circular waveguide operating in the dominant mode at a frequency of 9GHz with a maximum field strength of 300V/cm. The internal diameter is 5cm.Caluclate the maximum power.	[4M]
	b)	A rectangular-cavity resonator has dimensions of a=5 cm, b=2 cm and d=15cm, compute (i) the resonant frequency of the dominant mode for an air-filled cavity.	[12M]
		(ii) the resonant frequency of the dominant mode for a dielectric-filled cavity of ε_r =2.56	
4	a)	Explain the H-plane tee and determine its S-matrix.	[8M]
	b)	Describe in detail the operation of a 2-hole directional coupler, Calculate the coupling factor if the power in the primary waveguide is 72mw and the power delivered to the directional coupler is 8mw.	[8M]
5	a)	Explain in brief about the limitations of conventional vacuum tubes.	[8M]
	b)	Draw and explain of Two-cavity klystron amplifier.	[8M]
6	a)	Explain the function of HTWT.	[8M]
	b)	A normal cylindrical magnetron has the following parameters:	[8M]
	,	Inner radius R_a =0.15 meter, outer radius R_b =0.45 meter, Magnetic flux density B_0 =1.2 milliwebers/m ² .	. ,
		(a) Determine the Hull cutoff voltage.	
7	a)	(b) Determine the cutoff magnetic flux density if the beam voltage V_0 is 6000V. Draw and explain in detail about IMPATT diode.	[8M]
	b)	Draw the block schematic of typical microwave bench and explain the functionality of each block .	[8M]
