Hence, the required probability = $\frac{15}{36} = \frac{5}{12}$	= 80% of n = $-$ n
00 12	Now, according to the question,
Ans.61.(d) $\left(\frac{1}{4}\right)^{-2} = \left(\frac{4}{1}\right)^2 = 16$	$37 + (n - 4) \times - =$
Ans.62.(d) There are 12 edges in the cube, Volume = V.	or, 37 + =
Each edge = $V^{1/3}$.	
Total length of the edges = $12 V^{1/3}$.	or, 37 – — = — – —
Ans.63.(a) $2^5 \times 9^2 = 32 \times 81 = 2592$	or, $\frac{-}{-} = \frac{n-n}{n}$
Ans.64.(a) $\frac{P}{Q} = \frac{x^2 - 36}{x^2 - 49} \times \frac{x + 7}{x + 6} = \frac{x - 6}{x - 7}.$,
	or $\frac{91}{8} = \frac{7n}{40}$
Ans.65.(b) $-\left(-+++-+\right) = \frac{3}{10}$	\Rightarrow n = $\frac{\times}{\times}$ = 65
Ans.66.(c) Let the number be N	Therefore, total number of questions =
\Rightarrow According to the question,	65. Thus the required answer is
$(44)^2 < \mathrm{N} < (45)^2 \Longrightarrow \ 1935 < \mathrm{N} < 2025$	option (b).
Therefore, the required number would be any number between 1937 and 2025.	Ans.68.(a) Complete years 2000. No. of odd–days in 2000 = 0.
But from the question it is clear that the required number is the factor of 6 and the multiple of 5. So we have to find out	Odd day in Jan = 3, Feb = 0, March = 3, April 6, Total = 12, and odd days = 5. Day = Sunday + 5 = Friday
the number between 1937 and 2025 which is divisible by both 36 and 5. $6^2 = 36$	Ans.69.(c) Let x denote the monthly income variable and y denote the monthly expenditure.
	As per question,
LCM of 36 and $5 = 36 \times 5 = 180$ 180 \times 10 = 1800	$\frac{5}{-1}x - \frac{9}{-1}y = 500$ (i)
$180 \times 10 = 1980$ $180 \times 11 = 1980$	$\frac{5}{9}x - \frac{9}{16}y = 500 \dots (i)$
Thus the required no. is 1980 .	and $\frac{4}{9}x - \frac{7}{16}y = 500$ (ii)
So, Answer is (c).	Solving (i) and (ii) $x = 900$
Ans.67.(b) Let the total number of questions asked in examination be n.	\Rightarrow Their monthly income are $-x$ and
\Rightarrow No. of correct answer	-x = Rs. 5000 and Rs. 4000
	respectively.
