Q.5

CASE STUDY: www.FirstRanker.com www.FirstRanker.com

Ram and Balram were pursuing Electrical Engineering from a prestigious engineering college. During their third year they developed a solar LED bulb which can be used indoors. The bulb had a small panel which had to be charged at a stretch for 10 hours in the sun and it would last for 200 hours of usage. The idea was risky as there was a possibility that the market might not accept such a product, but if they do so, then, there would be a revolution in the power industry as it would lead to saving of power in every household. The prototype was made but to manufacture and distribute the same, they required around 25 lakhs (which include plant and Machinery cost). Both Ram and Balram approached some affluent individuals who were ready to invest in their business in exchange for a convertible debt. They have heard about government policy on MSME financing option but not fully aware of it.

- (a) Identify the different types of investors and their characteristics **07**
- (b) What are the latest schemes of Government for promoting MSME in India **07**

OR

- (a) Also help Ram and Balram to find out some more options to fund their business **07**
- (b) How relevant is it for both to take some debt and start their business. Give your view point? **07**
