		1	0	3	2.5
ENGINEERING DRAWING (ES1103)					

Course Objective: Engineering drawing being the principal method of communication for engineers, the objective is to introduce the students, the techniques of constructing the various types of polygons, curves and scales. The objective is also to visualize and represent the 3D objects in 2D planes with proper dimensioning, scaling etc.

Unit I

Objective: To introduce the students to use drawing instruments and to draw polygons, Engg. Curves.

Polygons: Constructing regular polygons by general methods, inscribing and describing polygons on circles.

Curves: Parabola, Ellipse and Hyperbola by general and special methods, cycloids, involutes, tangents & normals for the curves.

Scales: Plain scales, diagonal scales and vernier scales

Unit II

Objective: To introduce the students to use orthographic projections, projections of points & simple lines. To make the students draw the projections of the lines inclined to both the planes.

Orthographic Projections: Reference plane, importance of reference lines, projections of points in various quadrants, projections of lines, line parallel to both the planes, line parallel to one plane and inclined to other plane.

Projections of straight lines inclined to both the planes, determination of true lengths, angle of inclination and traces.

Unit III

Objective: The objective is to make the students draw the projections of the plane inclined to both the planes.

Projections of planes: regular planes perpendicular/parallel to one reference plane and inclined to the other reference plane; inclined to both the reference planes.

Unit IV

Objective: The objective is to make the students draw the projections of the various types of solids in different positions inclined to one of the planes.

Projections of Solids – Prisms, Pyramids, Cones and Cylinders with the axis inclined to both the planes.

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY: KAKINADA
KAKINADA – 533 003, Andhra Pradesh, India

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Unit V

Objective: The objective is to represent the object in 3D view through isometric views. The student will be able to represent and convert the isometric view to orthographic view and vice versa. Conversion of isometric views to orthographic views; Conversion of orthographic views to isometric views.

Computer Aided Design, Drawing practice using Auto CAD, Creating 2D&3D drawings of objects using Auto CAD

Note:In the End Examination there will be no question from CAD.

TEXT BOOKS:

1. Engineering Drawing by N.D. Butt, Chariot Publications
2. Engineering Drawing by Agarwal & Agarwal, Tata McGraw Hill Publishers

REFERENCE BOOKS:

1. Engineering Drawing by K.L.Narayana & P. Kannaiah, Scitech Publishers
2. Engineering Graphics for Degree by K.C. John, PHI Publishers
3. Engineering Graphics by P. Varghese, McGrawHill Publishers
4. Engineering Drawing + AutoCad – K Venugopal, V. Prabhu Raja, New Age

Course Outcome: The student will learn how to visualize 2D & 3D objects.

Unit-I

Regular Polygons, Ellipse and Scales

Dividing a line into equal parts

Steps:

- Draw a line MO at any convenient angle (preferably an acute angle) from point M .
- From M and along MO , cut off with a divider equal divisions (say three) of any convenient length.
- Draw a line joining RO .
- Draw lines parallel to RO through the remaining points on line MO . The intersection of these lines with line MN will divide the line into (three) equal parts.

Planar tangent condition exists when two geometric forms meet at a single point and do not intersect.

Locating tangent points on circle and arcs

Drawing an arc tangent to a given point on the line

Steps

- Given line AB and tangent point T. Construct a line perpendicular to line AB and through point T.

- Locate the center of the arc by making the radius on the perpendicular line. Put the point of the compass at the center of the arc, set the compass for the radius of the arc, and draw the arc which will be tangent to the line through the point T.

Drawing an arc, tangent to two lines

	(A) Right Angle	(B) Acute Angle	(C) Obtuse Angle
Initial Setup			
Step 1: Bisecting			
Step 2: Finding Center			
Step 3: Drawing Arc			
Application			

Drawing an arc, tangent to a line and an arc

(a) that do not intersect (b) that intersect

Construction of Regular Polygon of given length AB

Draw a line of length AB. With A as centre and radius AB, draw a semicircle.

With the divider, divide the semicircle into the number of sides of the polygon.

Draw a line joining A with the second division-point 2.

Construction of Regular Polygon of given length AB.....

The perpendicular bisectors of A2 and AB meet at O. Draw a circle with centre O and radius OA. With length A2, mark points F, E, D & C on the circumferences starting from 2 (*Inscribe circle method*)

With centre B and radius AB draw an arc cutting the line A6 produced at C. Repeat this for other points D, E & F (*Arc method*)

General method of drawing any polygon

Draw AB = given length of polygon

At B, Draw BP perpendicular & = AB

Draw Straight line AP

With center B and radius AB, draw arc AP.

The perpendicular bisector of AB meets st. line AP and arc AP in 4 and 6 respectively.

Draw circles with centers as 4, 5, & 6 and radii as 4B, 5B, & 6B and inscribe a square, pentagon, & hexagon in the respective circles.

Mark point 7, 8, etc with 6-7, 7-8, etc. = 4-5 to get the centers of circles of heptagon and octagon, etc.

Inscribe a circle inside a regular polygon

- Bisect any two adjacent internal angles of the polygon.
- From the intersection of these lines, draw a perpendicular to any one side of the polygon (say OP).
- With OP as radius, draw the circle with O as center.

Inscribe a regular polygon of any number of sides (say $n = 5$), in a circle

Draw the circle with diameter AB.

Divide AB in to “n” equal parts

Number them.

With center A & B and radius AB, draw arcs to intersect at P.

Draw line P2 and produce it to meet the circle at C.

AC is the length of the side of the polygon.

ENGINEERING DRAWING

Contents

1. Scales
2. Engineering Curves - I
3. Engineering Curves - II
4. Loci of Points
5. Orthographic Projections - Basics
6. Conversion of Pictorial View into Orthographic Views
7. Projections of Points and Lines
8. Projection of Planes
9. Projection of Solids
10. Sections & Development
11. Intersection of Surfaces
12. Isometric Projections
- 13.
14. Exercise
Solutions – Applications of Lines

Scales

1. Basic Information
2. Types and important units
3. Plain Scales (3 Problems)
4. Diagonal Scales - information
5. Diagonal Scales (3 Problems)
6. Comparative Scales (3 Problems)
7. Vernier Scales - information
8. Vernier Scales (2 Problems)
9. Scales of Cords - construction
10. Scales of Cords (2 Problems)

Engineering Curves – I

1. Classification
2. Conic sections - explanation
3. Common Definition
4. Ellipse – (six methods of construction)
5. Parabola – (Three methods of construction)
6. Hyperbola – (Three methods of construction)
7. Methods of drawing Tangents & Normals (four cases)

Engineering Curves – II

1. Classification
2. Definitions
3. Involute - (five cases)
4. Cycloid
5. Trochoids – (Superior and Inferior)
6. Epic cycloid and Hypo - cycloid
7. Spiral (Two cases)
8. Helix – on cylinder & on cone
9. Methods of drawing Tangents and Normals (Three cases)

Loci of Points

1. Definitions - Classifications
2. Basic locus cases (six problems)
3. Oscillating links (two problems)
4. Rotating Links (two problems)

Orthographic Projections - Basics

1. Drawing – The fact about
2. Drawings - Types
3. Orthographic (Definitions and Important terms)
4. Planes - Classifications
5. Pattern of planes & views
6. Methods of orthographic projections
7. 1st angle and 3rd angle method – two illustrations

Conversion of pictorial views in to orthographic v

1. Explanation of various terms
2. 1st angle method - illustration
3. 3rd angle method – illustration
4. To recognize colored surfaces and to draw three Views
5. Seven illustrations (no.1 to 7) draw different orthographic views
6. Total nineteen illustrations (no.8 to 26)

Projection of Points and Lines

1. Projections – Information
2. Notations
3. Quadrant Structure.
4. Object in different Quadrants – Effect on position of views.
5. Projections of a Point – in 1st quadrant.
6. Lines – Objective & Types.
8. Lines inclined to one plane.
9. Lines inclined to both planes.
10. Imp. Observations for solution
11. Important Diagram & Tips.
12. Group A problems 1 to 5
13. Traces of Line (HT & VT)
14. To locate Traces.
15. Group B problems: No. 6 to 8
16. HT-VT additional information.
17. Group B1 problems: No. 9 to 11
18. Group B1 problems: No. 9 to 1
19. Lines in profile plane
20. Group C problems: No.12 & 13
21. Applications of Lines:: Information
22. Group D: Application Problems: 14 to 23
23. Lines in Other Quadrants: (Four Problems)

Projections of Planes:

1. About the topic:
2. Illustration of surface & side inclination.
3. Procedure to solve problem & tips:
4. Problems: 1 to 5: Direct inclinations:
5. Problems: 6 to 11: Indirect inclinations:
6. Freely suspended cases: Info:
7. Problems: 12 & 13
8. Determination of True Shape: Info:
9. Problems: 14 to 17

Projections of Solids:

1. Classification of Solids:
 2. Important parameters:
 3. Positions with Hp & Vp: Info:
 4. Pattern of Standard Solution.
 5. Problem no 1,2,3,4: General cases:
 6. Problem no 5 & 6 (cube & tetrahedron)
 7. Problem no 7 : Freely suspended:
 8. Problem no 8 : Side view case:
 9. Problem no 9 : True length case:
 10. Problem no 10 & 11 Composite solids:
 11. Problem no 12 : Frustum & auxiliary plane:
-

Section & Development

1. Applications of solids:
 2. Sectioning a solid: Information:
 3. Sectioning a solid: Illustration Terms:
 4. Typical shapes of sections & planes:
 5. Development: Information:
 6. Development of diff. solids:
 7. Development of Frustums:
 8. Problems: Standing Prism & Cone: no. 1 & 2
 9. Problems: Lying Prism & Cone: no.3 & 4
 10. Problem: Composite Solid no. 5
 11. Problem: Typical cases no.6 to 9
-

Intersection of Surfaces:

1. Essential Information:
2. Display of Engineering Applications:
3. Solution Steps to solve Problem:
4. Case 1: Cylinder to Cylinder:
5. Case 2: Prism to Cylinder:
6. Case 3: Cone to Cylinder
7. Case 4: Prism to Prism: Axis Intersecting.
8. Case 5: Triangular Prism to Cylinder
9. Case 6: Prism to Prism: Axis Skew
10. Case 7 Prism to Cone: from top:
11. Case 8: Cylinder to Cone:

Isometric Projections

1. Definitions and explanation
2. Important Terms
3. Types.
4. Isometric of plain shapes-1.
5. Isometric of circle
6. Isometric of a part of circle
7. Isometric of plain shapes-2
8. Isometric of solids & frustums (no.5 to 16)
9. Isometric of sphere & hemi-sphere (no.17 & 18)
10. Isometric of Section of solid.(no.19)
11. Illustrated nineteen Problem (no.20 to 38)

OBJECTIVE OF THIS CD

Sky is the limit for vision.

Vision and memory are close relatives.

Anything in the jurisdiction of vision can be memorized for a long time.

*We may not remember what we hear for a long time,
but we can easily remember and even visualize what we have seen.
So vision helps visualization and both help in memorizing an event.*

Video effects are far more effective, is now an established fact.
Every effort has been done in this CD, to bring various planes, objects
in-front of observer, so that he/she can further visualize in proper
and reach to the correct solution, himself.

*Off-course this all will assist & give good results
only when one will practice all these methods and techniques
by drawing on sheets with his/her own hands, other wise*

*So observe each illustration carefully
note proper notes given everywhere*

*Go through the Tips given & solution steps carefully
Discuss your doubts with your teacher and make practice your own.
Then success is yours !!*

Go ahead confidently! Dream Team wishes you best luck !

SCALES

DIMENSIONS OF LARGE OBJECTS MUST BE REDUCED TO ACCOMMODATE ON STANDARD SIZE DRAWING SHEET. THIS REDUCTION CREATES A SCALE OF THAT REDUCTION RATIO, WHICH IS GENERALLY A FRACTION..

SUCH A SCALE IS CALLED REDUCING SCALE
AND
THAT RATIO IS CALLED REPRESENTATIVE FACTOR.

SIMILARLY IN CASE OF TINY OBJECTS DIMENSIONS MUST BE INCREASED FOR ABOVE PURPOSE. HENCE THIS SCALE IS CALLED ENLARGING SCALE. HERE THE RATIO CALLED REPRESENTATIVE FACTOR IS MORE THAN UNITY.

USE FOLLOWING FORMULAS FOR THE CALCULATIONS IN THIS TOPIC.

A REPRESENTATIVE FACTOR (R.F.) = $\frac{\text{DIMENSION OF DRAWING}}{\text{DIMENSION OF OBJECT}}$

$$= \frac{\text{LENGTH OF DRAWING}}{\text{ACTUAL LENGTH}}$$
$$= \sqrt{\frac{\text{AREA OF DRAWING}}{\text{ACTUAL AREA}}}$$
$$= \sqrt[3]{\frac{\text{VOLUME AS PER DRWG.}}{\text{ACTUAL VOLUME}}}$$

B LENGTH OF SCALE = R.F. $\times$ MAX. LENGTH TO BE MEASURED.

BE FRIENDLY WITH

1 KILOMETRE = 10 H

1 HECTOMETRE = 10 D

1 DECAMETRE = 10 M

1 METRE = 10 D

1 DECIMETRE = 10 C

1 CENTIMETRE = 10 M

TYPES OF SCALES:

1. PLAIN SCALES (FOR DIMENSIONS UP TO SINGLE
2. DIAGONAL SCALES (FOR DIMENSIONS UP TO TWO
3. VERNIER SCALES (FOR DIMENSIONS UP TO TWO
4. COMPARATIVE SCALES (FOR COMPARING TWO DIFFER
5. SCALE OF CORDS (FOR MEASURING/CONSTRUCT

PLAIN SCALE:- This type of scale represents two units or a unit and its sub-divisions.

PROBLEM NO.1:- Draw a scale 1 cm = 1m to read decimeters, to measure maximum distance. Show on it a distance of 4 m and 6 dm.

CONSTRUCTION:- $\frac{\text{DIMENSION OF DRAWING}}{\text{DIMENSION OF OBJECT}}$
a) Calculate R.F. =

$$\text{R.F.} = 1\text{cm} / 1\text{m} = 1/100$$

$$\begin{aligned}\text{Length of scale} &= \text{R.F.} \times \text{max. distance} \\ &= 1/100 \times 600 \text{ cm} \\ &= 6 \text{ cms}\end{aligned}$$

- b) Draw a line 6 cm long and divide it in 6 equal parts. Each part will represent large unit.
- c) Sub divide the first part which will represent second unit or fraction of first unit.
- d) Place (0) at the end of first unit. Number the units on right side of Zero and sub-divisions on left-hand side of Zero. **Take height of scale 5 to 10 mm for getting a look of scale.**
- e) After construction of scale mention its RF and name of scale as shown.
- f) Show the distance 4 m 6 dm on it as shown.

PROBLEM NO.2:- In a map a 36 km distance is shown by a line 45 cms long. Calculate a plain scale to read kilometers and hectometers, for max. 12 km. Show a distance of 8.3 km.

CONSTRUCTION:-

a) Calculate R.F.

$$R.F. = 45 \text{ cm} / 36 \text{ km} = 45 / 36 \cdot 1000 \cdot 100 = 1 / 80,000$$

$$\begin{aligned} \text{Length of scale} &= R.F. \times \text{max. distance} \\ &= 1 / 80000 \times 12 \text{ km} \\ &= 15 \text{ cm} \end{aligned}$$

- b) Draw a line 15 cm long and divide it in 12 equal parts. Each part will represent large unit or kilometer.
- c) Sub divide the first part which will represent second unit or fraction of first unit.
- d) Place (0) at the end of first unit. Number the units on right side of Zero and subdivisions on left-hand side of Zero. **Take height of scale 5 to 10 mm for getting a look of scale.**
- e) After construction of scale mention it's RF and name of scale as shown.
- f) Show the distance 8.3 km on it as shown.

PROBLEM NO.3:- The distance between two stations is 210 km. A passenger train covered in 7 hours. Construct a plain scale to measure time up to a single minute. RF is 1/200,000. Distance traveled by train in 29 minutes.

CONSTRUCTION:-

- a) 210 km in 7 hours. Means speed of the train is 30 km per hour (60 minutes)

$$\begin{aligned}\text{Length of scale} &= \text{R.F.} \times \text{max. distance per hour} \\ &= 1/200,000 \times 30\text{km} \\ &= 15 \text{ cm}\end{aligned}$$

- b) 15 cm length will represent 30 km and 1 hour i.e. 60 minutes.

Draw a line 15 cm long and divide it in 6 equal parts. Each part will represent 5 km and 10 minutes.

- c) Sub divide the first part in 10 equal parts, which will represent second unit or fraction of first unit. Each smaller part will represent distance traveled in one minute.

- d) Place (0) at the end of first unit. Number the units on right side of Zero and subdivisions on left-hand side of Zero. **Take height of scale 5 to 10 mm for getting a proper look of scale.**

- e) Show km on upper side and time in minutes on lower side of the scale as shown.

After construction of scale mention it's RF and name of scale as shown.

- f) Show the distance traveled in 29 minutes, which is 14.5 km, on it as shown.

R.F. = 1/100

PLANE SCALE SHOWING METERS AND DECIMETERS.

We have seen that the plain scales give only two dimensions, such as a unit and it's subunit or it's fraction.

The diagonal scales give us three successive dimensions that is a unit, a subunit and a subdivision of a subunit.

The principle of construction of a diagonal scale is as follows.

Let the XY in figure be a subunit.

From Y draw a perpendicular YZ to a suitable height.

Join XZ. Divide YZ in to 10 equal parts.

Draw parallel lines to XY from all these divisions and number them as shown.

From geometry we know that similar triangles have their like sides proportional.

Consider two similar triangles XYZ and 7' 7Z,
we have $7Z / YZ = 7'7 / XY$ (each part being one unit)

Means $7'7 = 7 / 10 \times XY = 0.7 XY$

∴

Similarly

$$1' - 1 = 0.1 XY$$

$$2' - 2 = 0.2 XY$$

Thus, it is very clear that, the sides of small triangles, which are parallel to divided lines, become progressively shorter in length by 0.1 XY.

The solved examples ON NEXT PAGES will make the principles of diagonal scales clear.

PROBLEM NO. 4 : The distance between Delhi and Agra is 200 km.
In a railway map it is represented by a line 5 cm long. Find it's R.F.
Draw a diagonal scale to show single km. And maximum 600 km.
Indicate on it following distances. 1) 222 km 2) 336 km 3) 459 km 4) 569 km

SOLUTION STEPS: $RF = 5 \text{ cm} / 200 \text{ km} = 1 / 40,00,000$
Length of scale = $1 / 40,00,000 \times 600 \times 10^5 = 15 \text{ cm}$

Draw a line 15 cm long. It will represent 600 km. Divide it in six equal parts. (each will represent 100 km). Divide first division in ten equal parts. Each will represent 10 km. Draw a line upward from left end and mark 10 parts on it of any distance. Name those parts 0 to 10 as shown. Join 9th sub-division with 10th division of the vertical divisions. Then draw parallel lines to this line from remaining points to complete diagonal scale.

DIAGONAL SCALE SHOWING KILOMETERS.

PROBLEM NO.5: A rectangular plot of land measuring 1.28 hectars is represented on a map by an area of 8 sq. cm. Calculate RF of the scale. Draw a diagonal scale to read single meter. Show a distance of 438 meters.

SOLUTION :

1 hector = 10, 000 sq. meters

1.28 hectars = $1.28 \times 10, 000$ sq. meters
 $= 1.28 \times 10^4 \times 10^4$ sq. cm

8 sq. cm area on map represents
 $= 1.28 \times 10^4 \times 10^4$ sq. cm on land

1 cm sq. on map represents
 $= 1.28 \times 10^4 \times 10^4 / 8$ sq cm on land

1 cm on map represent

$$= \sqrt{1.28 \times 10^4 \times 10^4 / 8} \text{ cm}$$

$$= 4, 000 \text{ cm}$$

1 cm on drawing represent 4, 000 cm, Means RF = 1 / 4000

Assuming length of scale 15 cm, it will represent 600 m.

Draw a line 15 cm long.

It will represent 600 m. Divide it in six equal parts (each will represent 100 m.)

Divide first division in ten equal parts. Each part will represent 10 m.

Draw a line upward from left end and mark 10 parts on it of any distance.

Name those parts 0 to 10 as shown. Join 9th division of horizontal scale with 10th division of the vertical scale.

Then draw parallel lines to this line from remaining divisions of horizontal scale and complete diagonal scale.

DIAGONAL SCALE SHOWING METERS.

PROBLEM NO.6:.. Draw a diagonal scale of R.F. 1: 2.5, showing centimeters and millimeters and long enough to measure up to 20 centimeters.

SOLUTION STEPS:

$$\text{R.F.} = 1 / 2.5$$

$$\begin{aligned}\text{Length of scale} &= 1 / 2.5 \times 20 \text{ cm.} \\ &= 8 \text{ cm.}\end{aligned}$$

1. Draw a line 8 cm long and divide it in to 4 equal parts.
(Each part will represent a length of 5 cm.)
2. Divide the first part into 5 equal divisions.
(Each will show 1 cm.)
3. At the left hand end of the line, draw a vertical line and on it step-off 10 equal divisions of any length.
4. Complete the scale as explained in previous problems.
Show the distance 13.4 cm on it.

$$\text{R.F.} = 1 / 2.5$$

DIAGONAL SCALE SHOWING CENTIMETERS.

Vernier Scales:

These scales, like diagonal scales, are used to read to a very small unit with great accuracy. It consists of two parts – a primary scale and a vernier. The primary scale is a plain scale divided into minor divisions.

As it would be difficult to sub-divide the minor divisions in ordinary way, it is done with the help of a vernier scale. The graduations on vernier are derived from those on the primary scale.

Figure to the right shows a part of a plain scale in which length A-O represents 10 cm. If we divide A-O

into ten equal parts, each will be of 1 cm. Now it would

not be easy to divide each of these parts into ten equal

divisions to get measurements in millimeters.

Now if we take a length BO equal to $10 + 1 = 11$ such equal parts, thus representing 11 cm, and divide it into ten equal divisions, each of these divisions will represent $11 / 10 = 1.1$ cm.

The difference between one part of AO and one division of BO will be equal $1.1 - 1.0 = 0.1$ cm or 1 mm.

This difference is called Least Count of the scale.

Example 10:

Draw a Vernier scale of RF = 1 / 25 to read centimeters upto 4 meters and on it, show lengths 2.39 m and 0.91 m

Vern

SOLUTION:

Length of scale = RF X max. Distance
 $= 1 / 25 \times 4 \times 100$
 $= 16 \text{ cm}$

CONSTRUCTION: (Main scale)

Draw a line 16 cm long.
 Divide it in 4 equal parts.
 (each will represent meter)
 Sub-divide each part in 10 equal parts
 (each will represent decimeter)
 Name those properly.

CONSTRUCTION: (Vernier)

Take 11 parts of Dm length and divide it in 10 equal parts.
 Each will show 0.11 m or 1.1 dm or 11 cm and cover the remaining 1 part.
 Covering these parts of Vernier.

TO MEASURE GIVEN LENGTHS:

(1) For 2.39 m : Subtract 0.99 from 2.39 i.e. 2.39 - 0.99 = 1.40
 The distance between 0.99 (left of Zero) and 1.40 (right of Zero) is 1.40 m.
 (2) For 0.91 m : Subtract 0.11 from 0.91 i.e. 0.91 - 0.11 = 0.80
 The distance between 0.11 and 0.80 (both left side of Zero) is 0.80 m.

Example 11: A map of size 500cm X 50cm wide represents an area of 6250 sq.Kms. Construct a vernier scale to measure kilometers, hectometers and decameters and long enough to measure upto 7 km. Indicate on it a) 5.33 km b) 59 decameters.

SOLUTION:

$$\begin{aligned} \text{RF} &= \sqrt{\frac{\text{AREA OF DRAWING}}{\text{ACTUAL AREA}}} \\ &= \sqrt{\frac{500 \times 50 \text{ cm sq.}}{6250 \text{ km sq.}}} \\ &= 2 / 10^5 \end{aligned}$$

Length of
scale = RF X max. Distance
= $2 / 10^5 \times 7 \text{ kms}$
= 14 cm

CONSTRUCTION: (Main scale)

Draw a line 14 cm long.
Divide it in 7 equal parts.
(each will represent km)
Sub-divide each part in 10 equal parts.
(each will represent hectometer)
Name those properly.

CONSTRUCTION: (Vernier)

Take 11 parts of hectometer part length
and divide it in 10 equal parts.
Each will show 1.1 hm m or 11 dm and
Covering in a rectangle complete scale.

CONIC SECTIONS

ELLIPSE, PARABOLA AND HYPERBOLA ARE CALLED CONIC SECTIONS
BECAUSE
THESE CURVES APPEAR ON THE SURFACE OF A CONE
WHEN IT IS CUT BY SOME TYPICAL CUTTING PLANES.

OBSERVE
ILLUSTRATIONS
GIVEN BELOW..

COMMON DEFINATION OF ELLIPSE, PARABOLA & HYPERBOLA:

These are the loci of points moving in a plane such that the ratio of the distance from a *fixed point* And a *fixed line* always remains constant.
The Ratio is called **ECCENTRICITY. (E)**

- A) For Ellipse $E < 1$
- B) For Parabola $E = 1$
- C) For Hyperbola $E > 1$

Refer Problem nos. 6. 9 & 12

SECOND DEFINATION OF AN ELLIPSE:

It is a locus of a point moving in a plane such that the **SUM** of it's distances from **TWO** fixed points always remains constant.

{ And this *sum equals* to the length of *major axis*
These **TWO** fixed points are **FOCUS 1 & FOCUS 2**

Refer Problem no.4

Ellipse by Arcs of Circles Method.

Problem 1 :-

Draw ellipse by concentric circle method.

Take major axis 100 mm and minor axis 70 mm long.

Steps:

1. Draw both axes as perpendicular bisectors of each other & name their ends as shown.
2. Taking their intersecting point as a center, draw two concentric circles considering both as respective diameters.
3. Divide both circles in 12 equal parts & name as shown.
4. From all points of outer circle draw vertical lines downwards and upwards respectively.
5. From all points of inner circle draw horizontal lines to intersect those vertical lines.
6. Mark all intersecting points properly as those are the points on ellipse.
7. Join all these points along with the ends of both axes in smooth possible curve. It is required ellipse.

Problem 3:-

Draw ellipse by Oblong method.

Draw a parallelogram of 100 mm and 70 mm long sides with included angle of 75° . Inscribe

STEPS ARE SIMILAR TO
THE PREVIOUS CASE
(RECTANGLE METHOD)
ONLY IN PLACE OF RECTANGLE,
HERE IS A PARALLELOGRAM.

PROBLEM 4.

MAJOR AXIS AB & MINOR AXIS CD ARE
100 AND 70MM LONG RESPECTIVELY
.DRAW ELLIPSE BY ARCS OF CIRCLES
METHOD.

STEPS:

1. Draw both axes as usual. Name the ends & intersecting point
2. Taking AO distance i.e. half major axis, from C, mark F_1 & F_2 on AB . (focus 1 and 2.)
3. On line F_1 - O taking any distance, mark points 1,2,3, & 4
4. Taking F_1 center, with distance A-1 draw an arc above AB and taking F_2 center, with B-1 distance cut this arc. Name the point p_1
5. Repeat this step with same centers but taking now A-2 & B-2 distances for drawing arcs. Name the point p_2
6. Similarly get all other P points.
With same steps positions of P can be located below AB.
7. Join all points by smooth curve to get an ellipse/

BY ARC

As per the definition Ellipse is locus of point in a plane such that the **SUM** of it's distances from two fixed points (F_1 & F_2) remains constant and equal to the length of major axis AB. (Note $A . 1 + B . 1 = A . 2 + B . 2$)

PROBLEM 5.

**DRAW RHOMBUS OF 100 MM & 70 MM LONG
DIAGONALS AND INSCRIBE AN ELLIPSE IN IT.**

STEPS:

1. Draw rhombus of given dimensions.
2. Mark mid points of all sides & name Those A,B,C,& D
3. Join these points to the ends of smaller diagonals.
4. Mark points 1,2,3,4 as four centers.
5. Taking 1 as center and 1-A radius draw an arc AB.
6. Take 2 as center draw an arc CD.
7. Similarly taking 3 & 4 as centers and 3-D radius draw arcs DA & BC.

Problem 13:

TANGENT

TO DRAW TANGENT & NORMAL TO THE CURVE FROM A GIVEN POINT

1. JOIN POINT Q TO F_1 & F_2
2. BISECT ANGLE F_1QF_2 THE ANGLE BISECTOR IS NORMAL
3. A PERPENDICULAR LINE DRAWN TO IT IS TANGENT TO THE CURVE

Unit-II

Projections of Points & Lines

www.FirstRanker.com

ORTHOGRAPHIC PROJECTION OF POINTS, LINES, PLANES, AND SOLIDS.

TO DRAW PROJECTIONS OF ANY OBJECT
ONE MUST HAVE FOLLOWING INFORMATION

- A) OBJECT
{ WITH IT'S DESCRIPTION, WELL DEFINED. }
- B) OBSERVER
{ ALWAYS OBSERVING PERPENDICULAR TO RESP. P. }
- C) LOCATION OF OBJECT,
{ MEANS IT'S POSITION WITH REFERENCE TO H.P. }

TERMS 'ABOVE' & 'BELOW' WITH RESPECTIVE TO
AND TERMS 'INFRONT' & 'BEHIND' WITH RESPECTIVE
FORM 4 QUADRANTS.

OBJECTS CAN BE PLACED IN ANY ONE OF THESE 4 QU

IT IS INTERESTING TO LEARN THE EFFECT ON THE POSITIONS O
OF THE OBJECT WITH RESP. TO X-Y LINE, WHEN PLACED IN DIFF

STUDY ILLUSTRATIONS GIVEN ON NEXT PAGES AND NOTE THE RESULTS. T
HERE A POINT A IS TAKEN AS AN OBJECT BECAUSE IT'S ALL VIEWS ARE

NOTATIONS

FOLLOWING NOTATIONS SHOULD BE FOLLOWED WHILE
DIFFERENT VIEWS IN ORTHOGRAPHIC PROJECTION

OBJECT	POINT A	LINE AB

338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000, 1001, 1002, 1003, 1004, 1005, 1006, 1007, 1008, 1009, 1010, 1011, 1012, 1013, 1014, 1015, 1016, 1017, 1018, 1019, 1020, 1021, 1022, 1023, 1024, 1025, 1026, 1027, 1028, 1029, 1030, 1031, 1032, 1033, 1034, 1035, 1036, 1037, 1038, 1039, 1040, 1041, 1042, 1043, 1044, 1045, 1046, 1047, 1048, 1049, 1050, 1051, 1052, 1053, 1054, 1055, 1056, 1057, 1058, 1059, 1060, 1061, 1062, 1063, 1064, 1065, 1066, 1067, 1068, 1069, 1070, 1071, 1072, 1073, 1074, 1075, 1076, 1077, 1078, 1079, 1080, 1081, 1082, 1083, 1084, 1085, 1086, 1087, 1088, 1089, 1090, 1091, 1092, 1093, 1094, 1095, 1096, 1097, 1098, 1099, 1100, 1101, 1102, 1103, 1104, 1105, 1106, 1107, 1108, 1109, 1110, 1111, 1112, 1113, 1114, 1115, 1116, 1117, 1118, 1119, 1120, 1121, 1122, 1123, 1124, 1125, 1126, 1127, 1128, 1129, 1130, 1131, 1132, 1133, 1134, 1135, 1136, 1137, 1138, 1139, 1140, 1141, 1142, 1143, 1144, 1145, 1146, 1147, 1148, 1149, 1150, 1151, 1152, 1153, 1154, 1155, 1156, 1157, 1158, 1159, 1160, 1161, 1162, 1163, 1164, 1165, 1166, 1167, 1168, 1169, 1170, 1171, 1172, 1173, 1174, 1175, 1176, 1177, 1178, 1179, 1180, 1181, 1182, 1183, 1184, 1185, 1186, 1187, 1188, 1189, 1190, 1191, 1192, 1193, 1194, 1195, 1196, 1197, 1198, 1199, 1200, 1201, 1202, 1203, 1204, 1205, 1206, 1207, 1208, 1209, 1210, 1211, 1212, 1213, 1214, 1215, 1216, 1217, 1218, 1219, 1220, 1221, 1222, 1223, 1224, 1225, 1226, 1227, 1228, 1229, 1230, 1231, 1232, 1233, 1234, 1235, 1236, 1237, 1238, 1239, 1240, 1241, 1242, 1243, 1244, 1245, 1246, 1247, 1248, 1249, 1250, 1251, 1252, 1253, 1254, 1255, 1256, 1257, 1258, 1259, 1260, 1261, 1262, 1263, 1264, 1265, 1266, 1267, 1268, 1269, 1270, 1271, 1272, 1273, 1274, 1275, 1276, 1277, 1278, 1279, 1280, 1281, 1282, 1283, 1284, 1285, 1286, 1287, 1288, 1289, 1290, 1291, 1292, 1293, 1294, 1295, 1296, 1297, 1298, 1299, 1300, 1301, 1302, 1303, 1304, 1305, 1306, 1307, 1308, 1309, 1310, 1311, 1312, 1313, 1314, 1315, 1316, 1317, 1318, 1319, 1320, 1321, 1322, 1323, 1324, 1325, 1326, 1327, 1328, 1329, 1330, 1331, 1332, 1333, 1334, 1335, 1336, 1337, 1338, 1339, 1340, 1341, 1342, 1343, 1344, 1345, 1346, 1347, 1348, 1349, 1350, 1351, 1352, 1353, 1354, 1355, 1356, 1357, 1358, 1359, 1360, 1361, 1362, 1363, 1364, 1365, 1366, 1367, 1368, 1369, 1370, 1371, 1372, 1373, 1374, 1375, 1376, 1377, 1378, 1379, 1380, 1381, 1382, 1383, 1384, 1385, 1386, 1387, 1388, 1389, 1390, 1391, 1392, 1393, 1394, 1395, 1396, 1397, 1398, 1399, 1400, 1401, 1402, 1403, 1404, 1405, 1406, 1407, 1408, 1409, 1410, 1411, 1412, 1413, 1414, 1415, 1416, 1417, 1418, 1419, 1420, 1421, 1422, 1423, 1424, 1425, 1426, 1427, 1428, 1429, 1430, 1431, 1432, 1433, 1434, 1435, 1436, 1437, 1438, 1439, 1440, 1441, 1442, 1443, 1444, 1445, 1446, 1447, 1448, 1449, 1450, 1451, 1452, 1453, 1454, 1455, 1456, 1457, 1458, 1459, 1460, 1461, 1462, 1463, 1464, 1465, 1466, 1467, 1468, 1469, 1470, 1471, 1472, 1473, 1474, 1475, 1476, 1477, 1478, 1479, 1480, 1481, 1482, 1483, 1484, 1485, 1486, 1487, 1488, 1489, 1490, 1491, 1492, 1493, 1494, 1495, 1496, 1497, 1498, 1499, 1500, 1501, 1502, 1503, 1504, 1505, 1506, 1507, 1508, 1509, 1510, 1511, 1512, 1513, 1514, 1515, 1516, 1517, 1518, 1519, 1520, 1521, 1522, 1523, 1524, 1525, 1526, 1527, 1528, 1529, 1530, 1531, 1532, 1533, 1534, 1535, 1536, 1537, 1538, 1539, 1540, 1541, 1542, 1543, 1544, 1545, 1546, 1547, 1548, 1549, 1550, 1551, 1552, 1553, 1554, 1555, 1556, 1557, 1558, 1559, 1560, 1561, 1562, 1563, 1564, 1565, 1566, 1567, 1568, 1569, 1570, 1571, 1572, 1573, 1574, 1575, 1576, 1577, 1578, 1579, 1580, 1581, 1582, 1583, 1584, 1585, 1586, 1587, 1588, 1589, 1590, 1591, 1592, 1593, 1594, 1595, 1596, 1597, 1598, 1599, 1600, 1601, 1602, 1603, 1604, 1605, 1606, 1607, 1608, 1609, 1610, 1611, 1612, 1613, 1614, 1615, 1616, 1617, 1618, 1619, 1620, 1621, 1622, 1623, 1624, 1625, 1626, 1627, 1628, 1629, 1630, 1631, 1632, 1633, 1634, 1635, 1636, 1637, 1638, 1639, 1640, 1641, 1642, 1643, 1644, 1645, 1646, 1647, 1648, 1649, 1650, 1651, 1652, 1653, 1654, 1655, 1656, 1657, 1658, 1659, 1660, 1661, 1662, 1663, 1664, 1665, 1666, 1667, 1668, 1669, 1670, 1671, 1672, 1673, 1674, 1675, 1676, 1677, 1678, 1679, 1680, 1681, 1682, 1683, 1684, 1685, 1686, 1687, 1688, 1689, 1690, 1691, 1692, 1693, 1694, 1695, 1696, 1697, 1698, 1699, 1700, 1701, 1702, 1703, 1704, 1705, 1706, 1707, 1708, 1709, 1710, 1711, 1712, 1713, 1714, 1715, 1716, 1717, 1718, 1719, 1720, 1721, 1722, 1723, 1724, 1725, 1726, 1727, 1728, 1729, 1730, 1731, 1732, 1733, 1734, 1735, 1736, 1737, 1738, 1739, 1740, 1741, 1742, 1743, 1744, 1745, 1746, 1747, 1748, 1749, 1750, 1751, 1752, 1753, 1754, 1755, 1756, 1757, 1758, 1759, 1760, 1761, 1762, 1763, 1764, 1765, 1766, 1767, 1768, 1769, 1770, 1771, 1772, 1773, 1774, 1775, 1776, 1777, 1778, 1779, 1780, 1781, 1782, 1783, 1784, 1785, 1786, 1787, 1788, 1789, 1790, 1791, 1792, 1793, 1794, 1795, 1796, 1797, 1798, 1799, 1800, 1801, 1802, 1803, 1804, 1805, 1806, 1807, 1808, 1809, 1810, 1811, 1812, 1813, 1814, 1815, 1816, 1817, 1818, 1819, 1820, 1821, 1822, 1823, 1824, 1825, 1826, 1827, 1828, 1829, 1830, 1831, 1832, 1833, 1834, 1835, 1836, 1837, 1838, 1839, 1840, 1841, 1842, 1843, 1844, 1845, 1846, 1847, 1848, 1849, 1850, 1851, 1852, 1853, 1854, 1855, 1856, 1857, 1858, 1859, 1860, 1861, 1862, 1863, 1864, 1865, 1866, 1867, 1868, 1869, 1870, 1871, 1872, 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1881, 1882, 1883, 1884, 1885, 1886, 1887, 1888, 1889, 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 217*

THIS QUADRANT PATTERN,
IF OBSERVED ALONG X-Y LINE (IN RED ARROW DIRECT
WILL EXACTLY APPEAR AS SHOWN ON RIGHT SIDE AND
IT IS FURTHER USED TO UNDERSTAND ILLUSTRATION

Point A is Placed In different quadrants and it's Fv & Tv are brought in same plane for Observer to see clearly.

Fv is visible as it is a view on VP. But as Tv is a view on Hp, it is rotated downward 90° , In clockwise direction. The In front part of Hp comes below xy line and the part behind Vp comes above.

Observe and note the process.

PROJECTIONS OF STRAIGHT LINE

INFORMATION REGARDING A LINE *means*
IT'S LENGTH,
POSITION OF IT'S ENDS WITH HP & VP
IT'S INCLINATIONS WITH HP & VP WILL BE GIVEN
AIM:- TO DRAW IT'S PROJECTIONS - MEANS FV & HV

SIMPLE CASES OF THE LINE

1. A VERTICAL LINE (LINE PERPENDICULAR TO HP)
2. LINE PARALLEL TO BOTH HP & VP.
3. LINE INCLINED TO HP & PARALLEL TO VP.
4. LINE INCLINED TO VP & PARALLEL TO HP.
5. LINE INCLINED TO BOTH HP & VP.

STUDY ILLUSTRATIONS GIVEN ON NEXT PAGE
SHOWING CLEARLY THE NATURE OF FV & HV
OF LINES LISTED ABOVE AND NOTE RESULTS

(Pictorial Presentation)

1.

A Line
perpendicular
to Hp
&
// to Vp

Note:

Fv is a vertical line
Showing True Length
&
Tv is a point.

and
parallel to Hp
(Pictorial presentation)

Tv inclined to xy
Fv parallel to xy.

5.

A Line inclined to both
Hp and Vp
(Pictorial presentation)

On removal of object
i.e. Line AB
Fv as a image on Vp.
Tv as a image on Hp,

Orthographic Projections
Fv is seen on Vp clearly.
*To see Tv clearly, HP is
rotated 90° downwards,*
Hence it comes below xy.

Note
Both Fv & TV
(No view)
Both Fv & TV
(No view)

Orthographic Projections
Means Fv & Tv of Line AB
are shown below,
with their apparent Inclinations
 α & β

Here TV (ab) is not // to XY line
Hence it's corresponding FV
 $a' b'$ is **not** showing
True Length &
True Inclination with Hp.

Note the procedure
When Fv & Tv known,
How to find True Length.
(Views are rotated to determine
True Length & its inclinations
with Hp & Vp).

In this sketch, TV is rotated
and made // to XY line.
Hence it's corresponding
FV $a' b_1'$ is showing
True Length
&
True Inclination with Hp.

GROUP (A)

GENERAL CASES OF THE LINE INCLINED TO BOTH H & V
(based on 10 parameters).

PROBLEM 1)

Line AB is 75 mm long and it is 30° & 40° Inclined to Hp & Vp respectively.
End A is 12mm above Hp and 10 mm in front of Vp.
Draw projections. Line is in 1st quadrant.

SOLUTION STEPS:

- 1) Draw xy line and one projector.
- 2) Locate a' 12mm above xy line & a 10mm below xy line.
- 3) Take 30° angle from a' & 40° from a and mark TL i.e. 75mm on both lines. Name those points b_1' and b_1 respectively.
- 4) Join both points with a' and a resp.
- 5) Draw horizontal lines (Locus) from both points.
- 6) Draw horizontal component of TL a b_1 from point b_1 and name it 1.
(the length a-1 gives length of Fv as we have seen already.)
- 7) Extend it up to locus of a' and rotating a' as center locate b' as shown.
Join a' b' as Fv.
- 8) From b' drop a projector down ward & get point b. Join a & b i.e. Tv.

PROBLEM 2:

Line AB 75mm long makes 45° inclination with Vp while it's Fv makes 55° angle with Hp. End A is 10 mm above Hp and 15 mm in front of Vp. If line is in 1st quadrant, draw its projections and find its inclination with Hp.

Solution Steps:-

1. Draw x-y line.
2. Draw one projector for a' & a .
3. Locate a' 10mm above x-y & a 15 mm below xy.
4. Draw a line 45° inclined to xy from point a and cut TL 75 mm on it and name that point b_1 . Draw locus from point b_1 .
5. Take 55° angle from a' for Fv above xy line.
6. Draw a vertical line from b_1 up to locus of a and name it 1. It is horizontal component of TL & is LFV.
7. Continue it to locus of a' and rotate upward up to the line of Fv and name it b' . This $a'b'$ line is Fv.
8. Drop a projector from b' on locus from point b_1 and name intersecting point b . Line ab is Tv of line AB.
9. Draw locus from b' and from a' with TL distance cut point b_1' .
10. Join $a'b_1'$ as TL and measure its angle at a' . It will be true angle of line with HP.

PROBLEM 3:

Fv of line AB is 50° inclined to xy and measures 55 mm long while it's Tv is 60° inclined to xy line. If end A is 10 mm above Hp and 15 mm in front of Vp, draw it's projections, find TL, inclinations of line with Hp & Vp.

SOLUTION STEPS:

1. Draw xy line and one projector.
2. Locate a' 10 mm above xy and a 15 mm below xy line.
3. Draw locus from these points.
4. Draw Fv 50° to xy from a' and mark b' Cutting 55mm on it.
5. Similarly draw Tv 60° to xy from a & drawing projector from b' Locate point b and join a b.
6. Then rotating views as shown, locate True Lengths ab_1 & $a'b_1'$ and their angles with Hp and Vp.

PROBLEM 4 :-

Line AB is 75 mm long .It's Fv and Tv measure 50 mm & 60 mm long respectively. End A is 10 mm above Hp and 15 mm in front of Vp. Draw projections of line AB if end B is in first quadrant.Find angle with Hp and Vp.

SOLUTION STEPS:

1. Draw xy line and one projector.
2. Locate a' 10 mm above xy and a 15 mm below xy line.
3. Draw locus from these points.
4. Cut 60mm distance on locus of a' & mark $1'$ on it as it is LTV.
5. Similarly cut 50mm on locus of a and mark point 1 as it is LFV.
6. From $1'$ draw a vertical line upward and from a' taking TL (75mm) in compass, mark b'_1 point on it. Join a' b'_1 points.
7. Draw locus from b'_1
8. With same steps below get b_1 point and draw also locus from it.
9. Now rotating one of the components i.e. a-1 locate b' and join a' with it to get Fv.
10. Locate tv similarly and measure Angles θ & Φ

PROBLEM 5 :-

T.V. of a 75 mm long Line CD, measures 50 mm.

End C is in Hp and 50 mm in front of Vp.

End D is 15 mm in front of Vp and it is above Hp.

Draw projections of CD and find angles with Hp and Vp.

SOLUTION STEPS:

1. Draw xy line and one projector.
2. Locate c' on xy and c 50mm below xy line.
3. Draw locus from these points.
4. Draw locus of d 15 mm below xy
5. Cut 50mm & 75 mm distances on locus of d from c and mark points d & d_1 as these are Tv and line CD lengths resp. & join both with c .
6. From d_1 draw a vertical line upward up to xy i.e. up to locus of c' and draw an arc as shown.
7. Then draw one projector from d to meet this arc in d' point & join c' d'
8. Draw locus of d' and cut 75 mm on it from c' as TL
9. Measure Angles θ & Φ

Unit- III

Projections of Lines

(Inclined to Both The Planes)

www.FirstRanker.com

GROUP (B)
PROBLEMS INVOLVING TRACES OF THE LINE.

TRACES OF THE LINE:-

THESE ARE THE POINTS OF INTERSECTIONS OF A LINE (OR IT'S EXTENSION) WITH RESPECTIVE REFERENCE PLANES.

A LINE ITSELF OR IT'S EXTENSION, WHERE EVER TOUCHES H.P. THAT POINT IS CALLED TRACE OF THE LINE ON H.P.(IT IS CALLED H.T.)

SIMILARLY, A LINE ITSELF OR IT'S EXTENSION, WHERE EVER TOUCHES V.P. THAT POINT IS CALLED TRACE OF THE LINE ON V.P.(IT IS CALLED V.T.)

V.T.:- It is a point on Vp.
Hence it is called F_v of a point in Vp.
Hence it's T_v comes on XY line.(Here onward named as 'V.T.')

H.T.:- It is a point on Hp.
Hence it is called T_v of a point in Hp.
Hence it's F_v comes on XY line.(Here onward named as 'H.T.')

STEPS TO LOCATE HT. (WHEN PROJECTIONS ARE GIVEN.)

1. Begin with FV. Extend FV up to XY line.
2. Name this point h'
(as it is a Fv of a point in Hp)
3. Draw one projector from h' .
4. Now extend Tv to meet this projector.
This point is HT

STEPS TO LOCATE VT. (WHEN PROJECTIONS ARE GIVEN.)

1. Begin with TV. Extend TV up to XY line.
2. Name this point v
(as it is a Tv of a point in Vp)
3. Draw one projector from v .
4. Now extend Fv to meet this projector.
This point is VT

Observe & note :-

1. Points h' & v always on one p
2. VT' & v always on one p
3. HT & h' always on one p
4. FV - h' - VT' always co-l
5. TV - v - HT always co-l

These p
solve ne

PROBLEM 7 :

One end of line AB is 10mm above Hp and other end is 100 mm in-front of Vp.

It's Fv is 45° inclined to xy while it's HT & VT are 45mm and 30 mm below xy respectively

Draw projections and find TL with it's inclinations with Hp & VP.

SOLUTION STEPS:-

Draw xy line, one projector and locate a' 10 mm above xy.

Draw locus 100 mm below xy for points b & b₁

Draw loci for VT and HT, 30 mm & 45 mm below xy respectively.

Take 45° angle from a' and extend that line backward to locate h' and VT, & Locate v on xy above VT.

Locate HT below h' as shown.

Then join v – HT – and extend to get top view end b.

Draw projector upward and locate b' Make a b & a'b' dark.

Now as usual rotating views find TL and it's inclinations.

PROBLEM 8 :- Projectors drawn from HT and VT of a line AB are 80 mm apart and those drawn from it's ends are 50 mm apart. End A is 10 mm above Hp, VT is 35 mm below Hp while it's HT is 45 mm in front of Vp. Draw projections, locate traces and find TL of line & inclinations with Hp and Vp.

SOLUTION STEPS:-

1. Draw xy line and two projectors, 80 mm apart and locate HT & VT, 35 mm below xy and 55 mm above xy respectively on these projectors.
2. Locate h' and v on xy as usual.
3. Now just like previous two problems, Extending certain lines complete Fv & Tv. And as usual find TL and it's inclinations.

THIS CONCEPT IS USED IN THE
NEXT *THREE* PAGES

PROBLEM 9 :-

Line AB 100 mm long is 30° and 45° inclined to Hp & Vp respectively.
End A is 10 mm above Hp and its VT is 20 mm below Hp
.Draw projections of the line and its HT.

SOLUTION STEPS:-

Draw xy, one projector and locate on it VT and V.
Draw locus of a' 10 mm above xy.
Take 30° from VT and draw a line.
Where it intersects with locus of a' name it a_1' as it is TL of that part.
From a_1' cut 100 mm (TL) on it and locate point b_1'
Now from v take 45° and draw a line downwards
& Mark on it distance VT- a_1' i.e.TL of extension & name it a_1
Extend this line by 100 mm and mark point b_1 .
Draw its component on locus of VT'
& further rotate to get other end of Fv i.e. b'
Join it with VT' and mark intersection point
(with locus of a_1') and name it a'
Now as usual locate points a and b and h' and HT.

PROBLEM 11 :- The projectors drawn from VT & end A of line AB are 40mm apart. End A is 15mm above Hp and 25 mm in front of Vp. VT of line is 20 mm below Hp. If line is 75mm long, draw its projections, find inclinations with HP & Vp

Draw two projectors for VT & end A
Locate these points and then

YES !

YOU CAN COMPLETE IT.

GROUP (C)

CASES OF THE LINES IN A.V.P., A.I.P. & PROFILE PLANE.

Line AB is in AIP as shown in above figure
It's FV ($a'b'$) is shown projected on Vp.(Looking in arrow direction)

Here one can clearly see that the
Inclination of AIP with HP = Inclination of FV with XY line

Line AB is in AVP as shown in above figure no 2..
It's TV ($a b$) is shown projected on Hp.(Looking in arrow direction)

Here one can clearly see that the
Inclination of AVP with VP = Inclination of TV with XY line

LINE IN A PROFILE PLANE (MEANS IN A PLANE PERPENDICULAR TO

ORTHOGRAPHIC PATTERN OF

Results:-

1. TV & FV both are vertical, hence arrive on same projector.
2. It's Side View shows True Length (TL)
3. Sum of it's inclinations with HP & VP equal to 90°
4. It's HT & VT arrive on same projector and HT = VT.

OBSERVE CAREFULLY ABOVE GIVEN ILLUSTRATION AND 2nd SOLVED PROBLEM

PROBLEM 12 :- Line AB 80 mm long, makes 30° angle with Hp and lies in an Aux. Vertical Plane 45° inclined to Vp. End A is 15 mm above Hp and VT is 10 mm below X-y line. Draw projections, find angle with Vp and Ht.

Simply consider inclination of AVP as inclination of TV of our line, well then?

You sure can complete it as previous problems!
Go ahead!!

PROBLEM 13 :- A line AB, 75mm long, has one end A in Vp. Other end B is 15 mm above Hp and 50 mm in front of Vp. Draw the projections of the line when sum of its Inclinations with HP & Vp is 90° , means it is lying in a profile plane. Find true angles with ref. planes and its traces.

SOLUTION STEPS:-

After drawing xy line and one projector
Locate top view of A i.e. point a on xy as it is in Vp,

Locate Fv of B i.e. b' 15 mm above xy as it is above Hp. and Tv of B i.e. b, 50 mm below xy as it is 50 mm in front of Vp

Draw side view structure of Vp and Hp and locate S.V. of point B i.e. b''

From this point cut 75 mm distance on Vp and Mark a'' as A is in Vp. (This is also VT of line.)

From this point draw locus to left & get a'

Extend SV up to Hp. It will be HT. As it is a Tv Rotate it and bring it on projector of b.

Now as discussed earlier SV gives TL of line and at the same time on extension up to Hp & Vp gives inclinations with those planes.

Unit- III

Projections of Planes

PROJECTIONS OF PLANES

In this topic various plane figures are the objects

What is usually asked in the problem?

To draw their projections means F.V, T.V

What will be given in the problem?

1. Description of the plane figure
1. It's position with HP and VP.

In which manner it's position with HP & VP will be de

1. Inclination of it's SURFACE with one of the reference planes will be g
 2. Inclination of one of it's EDGES with other reference plane will b
- (Hence this will be a case of an object inclined to both ref

Study the illustration showing
surface & side inclination given on next page.

PROCEDURE OF SOLVING THE PROBLEM:

IN THREE STEPS EACH PROBLEM CAN BE SOLVED: (As Shown In Previous Page)

STEP 1. Assume suitable conditions & draw Fv & Tv of initial position.

STEP 2. Now consider surface inclination & draw 2nd Fv & Tv.

STEP 3. After this, consider side/edge inclination and draw 3rd (final) Fv & Tv.

ASSUMPTIONS FOR INITIAL POSITION:

(Initial Position means assuming surface // to HP or VP)

1. If in problem surface is inclined to HP – assume it // HP

Or If surface is inclined to VP – assume it // to VP

2. Now if surface is assumed // to HP- It's TV will show True Shape.

And If surface is assumed // to VP – It's FV will show True Shape.

3. Hence begin with drawing TV or FV as True Shape.

4. While drawing this True Shape –

keep one side/edge (which is making inclination) perpendicular to the resp plane
(similar to pair no. A on previous page illustration).

Now Complete STEP 2. By making surface inclined to the resp plane & draw 2nd Fv & Tv.
(Ref. 2nd pair B on previous page illustration)

Now Complete STEP 3. By making side inclined to the resp plane & draw 3rd (final) Fv & Tv.
(Ref. 3rd pair C on previous page illustration)

APPLY SAME STEPS TO SOLVE NEXT ELEVEN PROBLEMS.

Problem 1:

Rectangle 30mm and 50mm sides is resting on HP on one small side which is 30° inclined to VP, while the surface of the plane makes 45° inclination with HP. Draw its projections.

Read problem and answer following questions:

1. Surface inclined to which plane?
2. Assumption for initial position?
3. So which view will show True shape?
4. Which side will be vertical? --

Hence begin with TV, draw rectangle, then draw one small side vertical

Problem 2:

A $30^\circ - 60^\circ$ set square of longest side

100 mm long, is in VP and 30°

inclined

to HP while it's surface is 45°

inclined

to VP. Draw it's projections

(Surface & Side inclinations directly given)

Read problem and answer questions

1. Surface inclined to which VP

2. Assumption for initial po VP

Hence begin with FV. draw

3. So which view will show

FV keeping longest s

4. Which side will be vertic

side.

side inclined to Hp

30°

a'1

c'1

a1

c1

45°

a' b' c'

a b c

Problem 3:

A $30^\circ - 60^\circ$ set square of longest side 100 mm long is in VP and its surface 45° inclined to VP. One end of longest side is 10 mm and other end is 35 mm above HP. Draw its projections

(Surface inclination directly given.
Side inclination indirectly given)

Read problem and answer following questions

1. Surface inclined to which plane?
2. Assumption for initial position?
3. So which view will show True FV?
4. Which side will be vertical?

First TWO steps are similar to previous problem.

Note the manner in which side inclination is given.

End A 35 mm above Hp & End B is 10 mm above Hp.

Hence begin with FV, draw triangle $a'b'c'$ with its final FV, projecting

Problem 4:

A regular pentagon of 30 mm sides is resting on HP on one of its sides with its surface 45° inclined to HP.

Draw its projections when the side in HP makes 30° angle with VP

SURFACE AND SIDE INCLINATIONS ARE DIRECTLY GIVEN.

Read problem and answer following questions:

1. Surface inclined to which plane?
2. Assumption for initial position?
3. So which view will show the true shape?
4. Which side will be vertical in the front view?

Hence begin with TV, draw the true shape.

X-Y line, taking one side vertical.

Problem 5:

A regular pentagon of 30 mm sides is resting on HP on one of its sides while its opposite vertex (corner) is 30 mm above HP.

Draw projections when side in HP is 30° inclined to VP.

ONLY CHANGE is

the manner in which surface inclination is described:

One side on Hp & its opposite corner 30 mm above Hp.

Hence redraw 1st Fv as a 2nd Fv making above arrangement.

Keep a'b' on xy & d' 30 mm above xy.

Read problem and answer for

1. Surface inclined to which
2. Assumption for initial po
3. So which view will show
4. Which side will be vertic

Hence begin with TV, dra

X-Y line, taking one side

Problem 6: A rhombus of diagonals 40 mm and 70 mm long respectively has one end of it's longer diagonal in HP while that diagonal is 35° inclined to HP. If the top-view of the same diagonal makes 40° inclination with VP, draw it's projections.

Read problem and answer following questions

1. Surface inclined to which plane? -----

HP

2. Assumption for initial position? ----- // to

HP

3. So which view will show True shape? ---

TV

4. Which diagonal horizontal? -----
Longer

Problem 7: A rhombus of diagonals 40 mm and 70 mm long respectively having one end of it's longer diagonal in HP while that diagonal is 35° inclined to HP and makes below 40° inclination with VP. Draw it's projections.

Note the difference in construction of 3rd step in both solutions.

The difference in these two problems
In problem no.6 inclination of TV or TL is given, It could be drawn directly as shown. While in no.7 angle of diagonal is given. Hence here angle of TL is taken. TL is drawn and then LTV i.e. a1 c1 is drawn and then final TV was completed. Study illustration.

Problem 8: A circle of 50 mm diameter is resting on Hp on end A of it's diameter AC which is 30° inclined to Hp while it's Tv is 45° inclined to Vp. Draw it's projections.

Read problem and answer following questions

1. Surface inclined to which plane? -----

HP

2. Assumption for initial position? ----- // to

HP

3. So which view will show True shape? ---

TV

4. Which diameter is horizontal? -----

AC

Hence begin with TV, draw rhombus below

X-Y line, taking longer diagonal // to X-Y

Note the difference in construction of 3rd step in both solutions.

The difference in these two problems is that in problem no.8 inclination of Tv is given, it could be drawn directly as a circle. While in no.9 angle of AC itself is given. Hence here angle of TL is drawn and then LTV i.e. a_1c_1 is drawn and then final TV was completed. Study illustration.

Problem 10: End A of diameter AB of a circle is in HP
And end B is in VP. Diameter AB, 50 mm long is
 30° & 60° inclined to HP & VP respectively.
Draw projections of circle.

The problem is similar to previous problem of circle – no. 9.
But in the 3rd step there is one more change.
Like 9th problem True Length inclination of dia. AB is definitely expected
but if you carefully note - the the SUM of it's inclinations with HP & VP is 90° .
Means Line AB lies in a Profile Plane.

Hence it's both Tv & Fv must arrive on one single projector.

So do the construction accordingly AND note the case carefully..

Read problem and answer for

Problem 11:

A hexagonal lamina has its one side in HP and its opposite parallel side is 25mm above HP and in VP. Draw its projections. Take side of hexagon 30 mm long.

ONLY CHANGE is the manner in which surface inclination is described:

One side on Hp & its opposite side 25 mm above Hp.

Hence redraw 1st Fv as a 2nd Fv making above arrangement

Keep a'b' on xy & d'e' 25 mm above xy.

Read problem and answer questions

1. Surface inclined to which HP

2. Assumption for initial HP

3. So which view will show TV

4. Which diameter horizontal AC

Hence begin with TV,

X-Y line, taking long

FREELY SUSPENDED CASES.

Problem 12:

An isosceles triangle of 40 mm long base side, 60 mm long altitude is freely suspended from one corner of Base side. Its plane is 45° inclined to Vp. Draw its projections.

First draw a given triangle
With given dimensions,
Locate its centroid position
And
join it with point of suspension.

IMPORTANT POINTS

1. In this case the plane of the figure always remains parallel to Vp.
2. It may remain parallel or inclined to Vp.
3. Hence **TV** in this case will be always a **LINE**.
4. Assuming surface // to Vp, draw true shape in FV.
(Here keep **line joining point of contact & centroid** perpendicular to XY line)
5. Always begin with FV as a True Shape but in FV, AS shown in 1st FV.

Similarly solve next problem
of Semi-circle

Problem 13

A semicircle of 100 mm diameter is suspended from a point on its straight edge 30 mm from the midpoint of that edge so that the surface makes an angle of 45° with VP. Draw its projections.

IMPORTANT POINTS

1. In this case the plane of the figure always remains perpendicular to VP.
2. It may remain parallel or inclined to VP.
3. Hence **TV** in this case will be always a **LINE**.
4. Assuming surface // to VP, draw true shape in FV.
(Here keep **line joining point of contact & centroid** perpendicular to XY line.)
5. Always begin with FV as a True Shape but in AS shown in 1st FV.

First draw a given semicircle
With given diameter,
Locate its centroid position
And
join it with point of suspension.

To determine true shape of plane figure when it's projections are
BY USING AUXILIARY PLANE METHOD

WHAT WILL BE THE PROBLEM?

Description of final Fv & Tv will be given

You are supposed to determine true

Follow the below given steps:

1. Draw the given Fv & Tv as per the given information in problem.
2. Then among all lines of Fv & Tv select a line showing True Length (T.L.)
(It's other view must be // to xy)
3. Draw x_1-y_1 perpendicular to this line showing T.L.
4. Project view on x_1-y_1 (it must be a line view)
5. Draw x_2-y_2 // to this line view & project new view on it.

It will be the required answer i.e. True Shape.

The facts you must know:-

If you carefully study and observe the solutions of all

You will find

IF ONE VIEW IS A LINE VIEW & THAT TOO PARALLEL

TO XY THEN IT'S OTHER VIEW WILL SHOW TRUE SHAPE.

NOW FINAL VIEWS ARE ALWAYS SOME SHAPE, NOT LINE VIEWS:

SO APPLYING ABOVE METHOD:

WE FIRST CONVERT ONE VIEW IN INCLINED LINE VIEW .(By using x_1y_1 aux.plane)
THEN BY MAKING IT // TO x_2-y_2 WE GET TRUE SHAPE.

Problem 14 Tv is a triangle abc . Ab is 50 mm long, angle cab is 30° and angle cba is 65° . $a'b'c'$ is a Fv. a' is 25 mm, b' is 40 mm and c' is 10 mm above Hp respectively. Draw projectors of that figure and find its true shape.

As per the procedure-

1. First draw Fv & Tv as per the data.
2. In Tv line ab is $\parallel$ to xy hence its other view $a'b'$ is TL. So draw x_1y_1 perpendicular to it.
3. Project view on x_1y_1 .
 - a) First draw projectors from $a'b'$ & c' on x_1y_1 .
 - b) from xy take distances of a, b & c (Tv) mark on these projectors from x_1y_1 . Name points a_1, b_1, c_1 .
 - c) This line view is an Aux. Tv. Draw $x_2y_2 \parallel$ to this line view and project Aux. Fv on it. for that from x_1y_1 take distances of $a'b'$ & c' and mark from x_2y_2 on new projectors.
4. Name points a'_1, b'_1 & c'_1 and join them. This will be the required true shape.

ALWAYS FOR
DISTANCES OF
AND FOR NEW
OF PREV
REMEMBER

Problem 15: Fv & Tv of a triangular plate are shown.
Determine it's true shape.

USE SAME PROCEDURE STEPS
OF PREVIOUS PROBLEM:

BUT THERE IS ONE DIFFICULTY

NO LINE IS // TO XY IN ANY VIEW.
MEANS NO TL IS AVAILABLE.

IN SUCH CASES DRAW ONE LINE
// TO XY IN ANY VIEW & IT'S OTHER
VIEW CAN BE CONSIDERED AS TL
FOR THE PURPOSE.

HERE $a'1'$ line in Fv is drawn // to xy.
HENCE it's Tv $a-1$ becomes TL.

THEN FOLLOW SAME STEPS AND
DETERMINE TRUE SHAPE.
(STUDY THE ILLUSTRATION)

ALWAYS FOR NEW FV TAKE
DISTANCES OF PREVIOUS FV
AND FOR NEW TV, DISTANCES
OF PREVIOUS TV

REMEMBER!!

Problem 17 : Draw a regular pentagon of 30 mm sides with one side 30° inclined to xy. This figure is Tv of some plane whose Fv is a line 45° inclined to xy. Determine its true shape.

IN THIS CASE ALSO TRUE LENGTH IS NOT AVAILABLE IN ANY VIEW.

BUT ACTUALLY WE DONOT REQUIRE TL TO FIND IT'S TRUE SHAPE, AS ONE VIEW (FV) IS ALREADY A LINE VIEW. SO JUST BY DRAWING $X_1Y_1 \parallel$ TO THIS VIEW WE CAN PROJECT VIEW ON IT AND GET TRUE SHAPE:

STUDY THE ILLUSTRATION..

ALWAYS FOR NEW FV
TAKE DISTANCES OF
PREVIOUS FV AND FOR
NEW TV, DISTANCES OF
PREVIOUS TV

REMEMBER!!

SOLIDS

To understand and remember various solids in this subject, those are classified & arranged in to two major groups.

Group A

Solids having top and base of same shape

Group B

Solids having base of any shape and just a point as a top.

Cylinder

Cone

Prisms

Triangular

Square

Pentagonal

Hexagonal

Pyramids

Triangular

Square

Pentagonal

Cube

(A solid having six square faces)

Tetrahedron

(A solid having Four triangular faces)

SOLIDS

Dimensional parameters of different solid

Square Prism

Square Pyramid

Cylinder

Sections of solids(top & base not parallel)

Frustum of cone & pyramid
(top & base parallel to each other)

STEPS TO SOLVE PROBLEMS IN SOLIDS

Problem is solved in three steps:

STEP 1: ASSUME SOLID STANDING ON THE PLANE WITH WHICH IT IS MAKING IT'S INCLINATION
(IF IT IS INCLINED TO HP, ASSUME IT STANDING ON HP)
(IF IT IS INCLINED TO VP, ASSUME IT STANDING ON VP)

IF STANDING ON HP - IT'S TV WILL BE TRUE SHAPE OF IT'S BASE OR
IF STANDING ON VP - IT'S FV WILL BE TRUE SHAPE OF IT'S BASE OR
BEGIN WITH THIS VIEW:

IT'S OTHER VIEW WILL BE A RECTANGLE (IF SOLID IS *CYLINDER OR ONE OF THE GROUP A SOLIDS*)
IT'S OTHER VIEW WILL BE A TRIANGLE (IF SOLID IS *CONE OR ONE OF THE GROUP B SOLIDS*)

DRAW FV & TV OF THAT SOLID IN STANDING POSITION:

STEP 2: CONSIDERING SOLID'S INCLINATION (AXIS POSITION) DRAW IT'S FV & TV

STEP 3: IN LAST STEP, CONSIDERING REMAINING INCLINATION, DRAW IT'S FINAL FV & TV

GENERAL PATTERN (THREE STEPS) OF SOLUTION:

PROBLEM NO. 12	CASE OF A FRUSTUM (AUXILIARY PLAN

Problem 1. A square pyramid, 40 mm base sides and axis 60 mm long, has a triangular face on the ground and the vertical plan containing the axis makes an angle of 45° with the VP. Draw its projections. Take apex nearer to VP

Solution Steps :

Triangular face on Hp, means it is lying on Hp

1. Assume it standing on Hp.

2. Its Tv will show True Shape of base (square)

3. Draw square of 40mm sides with one side vertical taking 50 mm axis project Fv. (a triangle)

4. Name all points as shown in illustration.

5. Draw 2nd Fv in lying position i.e. o'c'd' face on

6. Make visible lines dark and hidden dotted, as

7. Then construct remaining inclination with Vp (Vp containing axis is the center line of 2nd Tv shown take apex near to xy, as it is nearer to

For dark and dotted lines

1. Draw proper outline of new view DARK.
2. Decide direction of an observer.
3. Select nearest point to observer and draw all lines starting from it-dark.
4. Select farthest point to observer and draw all lines (remaining) from it- dotted.

Problem 2:

A cone 40 mm diameter and 50 mm axis is resting on one generator on Hp which makes 30° inclination with Vp. Draw its projections.

For dark and dotted lines

1. Draw proper outline of new view DARK.
2. Decide direction of an observer.
3. Select nearest point to observer and draw all lines starting from it-dark.
4. Select farthest point to observer and draw all lines (remaining) from it- dotted.

Solution Steps:

Resting on Hp on one generator

1. Assume it standing on Hp.
2. Its Tv will show True Shape.
3. Draw 40mm dia. Circle as Tv.
4. Name all points as shown in Fig.
5. Draw 2nd Fv in lying position.
6. Make visible lines dark and hidden lines dotted as per the procedure.
7. Then construct remaining in 2nd Fv (generator o_1e_1 30° to xy as s

Problem 3:

A cylinder 40 mm diameter and 50 mm axis is resting on one point of a base circle on Vp while it's axis makes 45° with Vp and Fv of the axis 35° with Hp. Draw projections..

Solution Steps:

Resting on Vp on one point of base, means

1. Assume it standing on Vp
2. It's Fv will show True Shape of base & top
3. Draw 40mm dia. Circle as Fv & taking 50mm as height (a Rectangle)
4. Name all points as shown in illustration.
5. Draw 2nd Tv making axis 45° to xy And project
6. Make visible lines dark and hidden dotted
7. Then construct remaining inclination with Hp (Fv of axis i.e. center line of view to xy as 35°)

Problem 4: A square pyramid 30 mm base side and 50 mm long axis is resting on its apex on H_f such that its one slant edge is vertical and a triangular face through it is perpendicular to V_p . Draw its projections.

Solution Steps :

1. Assume it standing on H_p but as said on H_f
2. Its T_v will show True Shape of base (square)
3. Draw a corner case square of 30 mm sides. Showing all slant edges dotted, as those will be hidden.
4. taking 50 mm axis project Fv. (a triangle)
5. Name all points as shown in illustration.
6. Draw 2nd Fv keeping $o'a'$ slant edge vertical
7. Make visible lines dark and hidden dotted, as those will be hidden.
8. Then redraw 2nd T_v as final T_v keeping a_1o_1 perpendicular to V_p i.e. xy . Then as usual project it on H_f .

Problem 5: A cube of 50 mm long edges is so placed on Hp on one corner that a body diagonal is parallel to Hp and perpendicular to Vp. Draw its projections.

Solution Steps:

1. Assuming standing on Hp, begin with Tv, a square equally inclined to xy. Project Fv and name all points.
2. Draw a body-diagonal joining c' with $3'$ (This can be done).
3. From $1'$ drop a perpendicular on this and name it p' .
4. Draw 2nd Fv in which $1'-p'$ line is vertical means $1'-p'$ must be horizontal. Now as usual project Tv..
6. In final Tv draw same diagonal is perpendicular to $1'-p'$. Then as usual project final FV.

Problem 6: A tetrahedron of 50 mm long edges is resting on one edge on Hp while one triangular face containing this edge is vertical and 45° inclined to Vp. Draw

IMPORTANT:

Tetrahedron is a special type of triangular pyramid in which base sides & slant edges are equal in length. Solid of four faces. Like cube it is also described by One dimension only.. Axis length generally not given.

Solution Steps

As it is resting assume it standing on one edge. Begin with Tv, an equilateral triangle as shown:

First project base points of Fv on xy line.

From a' with TL of edge, 50 mm, cut arc and mark o'

(as axis is not known, o' is finalized by 50 mm length)

Then complete Fv.

In 2nd Fv make face $a'b'c'$ vertical and

And like all previous problems solve

FREELY SUSPENDED SOLIDS:

Positions of CG, on axis, from base, for different solids are shown

GROUP A SOLIDS
(Cylinder & Prisms)

GROUP B SOLIDS
(Cone & Pyramids)

Problem 7: A pentagonal pyramid 30 mm base sides & 60 mm long axis, is freely suspended from one corner of base so that a plane containing it's axis remains parallel to Vp. Draw it's three views.

IMPORTANT:
When a solid is freely suspended from a corner, then line joining point of contact & C.G. remains vertical. (Here axis shows inclination with Hp.) So in all such cases, assume solid standing on Hp initially.)

Solution Steps:

- In all suspended cases axis shows inclination with Hp.
1. Hence assuming it standing on Hp, draw Tv - a regular pentagon.
 2. Project Fv & locate CG position on axis - ($\frac{1}{4} H$ from top). Join it with corner d'
 3. As 2nd Fv, redraw first keeping line g'd' vertical.
 4. As usual project corresponding Tv and then Side View.

Solution Steps:

1. Assuming it standing on Hp begin with Tv, a square of corner case.
2. Project corresponding Fv. & name all points as usual in both views.
3. Join $a'1'$ as body diagonal and draw 2nd Fv making it vertical ($1'$ on xy).
4. Project it's Tv drawing dark and dotted lines as per the procedure.
5. With standard method construct Left-hand side view.

(Draw a 45° inclined Line in Tv region (below xy).
Project horizontally all points of Tv on this line and
reflect vertically upward, above xy. After this, draw
horizontal lines, from all points of Fv, to meet these
lines. Name points of intersections and join properly.
For dark & dotted lines
locate observer on left side of Fv as shown.)

Problem 8:

A cube of 50 mm long
on Hp on one corner t
through this corner is
and parallel to Vp Dra

Problem 9: A right circular cone, 40 mm base diameter and 60 mm long axis is resting on Hp on one point of base circle such that it's axis makes 45° inclination with Hp and 40° inclination with Vp. Draw its projections.

This case resembles to problem no.7 & 9 from previous problems. In previous all cases 2nd inclination was done by a parameter of axis is inclined to Vp etc. But here it is clearly said that axis is inclined to Vp. Means here TL inclination is expected. So the same method as in previous problems is done here also. See carefully the final Tv and its construction. So assuming it standing on HP begin as follows.

Problem 10: A triangular prism, 40 mm base side 60 mm axis is lying on Hp on one rectangular face with axis perpendicular to Vp. One square pyramid is leaning on its face centrally with axis // to vp. Its base side is 30 mm & axis is 60 mm long resting on Hp on one edge of base. Draw FV & TV of both solids. Project another FV on an AVP 45° inclined to VP.

Steps :

Draw Fv of lying prism (an equilateral Triangle)
And Fv of a leaning pyramid.
Project Tv of both solids.
Draw x_1y_1 45° inclined to xy and project aux. Fv on it.
Mark the distances of first FV from first xy for the distances of aux. Fv from x_1y_1 line.
Note the observer's directions Shown by arrows and further steps carefully.

Problem 11: A hexagonal prism of base side 30 mm long and axis 40 mm long, is standing on Hp on its base with one base edge // to Vp. A tetrahedron is placed centrally on the top of it. The base of tetrahedron is a triangle formed by joining alternate corners of top of prism. Draw projections of both solids. Project an auxiliary Tv on AIP 45° inclined to Hp.

STEPS:

Draw a regular hexagon as Tv of standing prism With one side // to xy and name the top points. Project its Fv – a rectangle and name its top.

Now join its alternate corners a-c-e and the triangle formed is base of a tetrahedron as said.

Locate center of this triangle & locate apex o

Extending its axis line upward mark apex o'

By cutting TL of edge of tetrahedron equal to a-c. and complete Fv of tetrahedron.

Draw an AIP (x_1y_1) 45° inclined to xy And project Aux.Tv on it by using similar Steps like previous problem.

Problem 12: A frustum of regular hexagonal pyramid is standing on it's larger base On Hp with one base side perpendicular to Vp. Draw it's Fv & Tv.
Project it's Aux.Tv on an AIP parallel to one of the slant edges showing TL.
Base side is 50 mm long , top side is 30 mm long and 50 mm is height of frustum.

Unit- VI

Orthographic and Isometric Projections

DRAWINGS: *(A Graphical Representation)*

The Fact about:

If compared with Verbal or Written Description, Drawings offer far better idea about the Shape, Size & Appearance of any object or situation or location, that too in quite a less time.

Hence it has become the Best Media of Communication not only in Engineering but in almost all Fields.

www.jntuworld.com

ORTHOGRAPHIC PROJECTIONS:

**IT IS A TECHNICAL DRAWING IN WHICH DIFFERENT VIEWS OF
ARE PROJECTED ON DIFFERENT REFERENCE PLANE
OBSERVING PERPENDICULAR TO RESPECTIVE REFERENCE**

Different Reference planes are

**Horizontal Plane (HP),
Vertical Frontal Plane (VP)
Side Or Profile Plane (PP)**

And

Different Views are Front View (FV), Top View (TV) and Side View

FV is a view projected on VP.

TV is a view projected on HP.

SV is a view projected on PP.

IMPORTANT TERMS OF ORTHOGRAPHIC PROJECTION

- 1 Planes.**
- 2 Pattern of planes & Pattern of views**
- 3 Methods of drawing Orthographic Projection**

www.jntuworld.com

2

PATTERN OF PLANES & VIEWS (First Angle Method)

THIS IS A PICTORIAL SET-UP OF ALL THREE PLANES. ARROW DIRECTION IS A NORMAL WAY OF OBSERVING THE OBJECT BUT IN THIS DIRECTION ONLY VP AND A VIEW ON IT (FV) CAN BE SEEN. THE OTHER PLANES AND VIEWS ON THOSE CAN NOT BE SEEN.

PROCEDURE TO SOLVE ABOVE PROBLEM:-

TO MAKE THOSE PLANES ALSO VISIBLE FROM THE ARROW DIRECTION

A) HP IS ROTATED 90° DOWNWARD

B) PP, 90° IN RIGHT SIDE DIRECTION.

THIS WAY BOTH PLANES ARE BROUGHT IN THE SAME PLANE

Click to view Animation

On clicking the button if a warning comes please click YES to continue. It is safe for your pc.

HP IS ROTATED DOWNWARD 90°
AND
BROUGHT IN THE PLANE OF VP.

PP IS ROTATED IN RIGHT SIDE 90°
AND
BROUGHT IN THE PLANE OF VP.

ISOMETRIC DRAWING

IT IS A TYPE OF PICTORIAL PROJECTION
IN WHICH ALL THREE DIMENSIONS OF
AN OBJECT ARE SHOWN IN ONE VIEW AND
IF REQUIRED, THEIR ACTUAL SIZES CAN BE
MEASURED DIRECTLY FROM IT.

TYPICAL CONDITI

IN THIS 3-D DRAWING OF A
ALL THREE DIMENSIONAL
MENTAINED AT EQUAL INC
WITH EACH OTHER.(

3-D DRAWINGS CAN BE DRAWN
IN NUMEROUS WAYS AS SHOWN BELOW.
ALL THESE DRAWINGS MAY BE CALLED
3-DIMENSIONAL DRAWINGS,
OR PHOTOGRAPHIC
OR PICTORIAL DRAWINGS.
HERE NO SPECIFIC RELATION
AMONG H, L & D AXES IS MENTAINED.

NOW OBSERVE BELOW GIVEN
ONE CAN NOTE SPECIFIC IN
AMONG H, L & D AXES
ISO MEANS SAME, SIMILAR C
HERE ONE CAN FIN
EDUAL INCLINATION AMONG H
EACH IS 120° INCLINED WITH C
HENCE IT IS CALLED **ISOMETRIC**

PURPOSE OF ISOMETRIC DRAWING IS TO UNDERSTAND
OVERALL SHAPE, SIZE & APPEARANCE OF AN OBJECT PRIOR TO IT'S PR

SOME IMPORTANT TERMS:

ISOMETRIC AXES, LINES AND PLANES:

The three lines AL, AD and AH, meeting at point A and making 120° angles with each other are termed **Isometric Axes**.

The lines parallel to these axes are called **Isometric Lines**.

The planes representing the faces of the cube as well as other planes parallel to these planes are called **Isometric Planes**.

ISOMETRIC SCALE:

When one holds the object in such a way that all three dimensions are visible then in the process all dimensions become proportionally inclined to observer's eye sight and hence appear apparent in lengths.

This reduction is 0.815 or $9/11$ (approx.) It forms a reducing scale which is used to draw isometric drawings and is called **Isometric scale**.

In practice, while drawing isometric projection, it is necessary to convert true lengths into isometric lengths for measuring and marking the sizes. This is conveniently done by constructing an isometric scale as described on next page.

TYPES OF ISOMETRIC DRAWINGS

ISOMETRIC VIEW

Drawn by using True scale
(True dimensions)

ISOMETRIC PROJECTION

Drawn by using Isometric scale
(Reduced dimensions)

Isometric scale [Line AC]
required for Isometric Projection

CONSTRUCTION OF ISOMETRIC SCALE
From point A, with line AB, draw a 45° inclined line AC. Mark divisions of true length on AB. From each division-point, draw a vertical line up to AC line. The divisions thus obtained give lengths on isometric scale.

www.jntuworld.com

1 ISOMETRIC OF PLANE FIGURES

AS THESE ALL ARE 2-D FIGURES WE REQUIRE ONLY TWO ISOMETRIC AXES.

IF THE FIGURE IS FRONT VIEW, H & L AXES ARE REQUIRED.

IF THE FIGURE IS TOP VIEW, D & L AXES ARE REQUIRED.

Shapes containing Inclined lines should be enclosed in a rectangle as shown. Then first draw isom. of that rectangle and then inscribe that shape as it is.

SHAPE	Isometric view if the F.V. or

STUDY ILLUSTRATIONS

PROBLEM: A TRIANGULAR PYRAMID OF 30 MM BASE SIDES AND 50 MM LONG AXIS, IS CENTRALLY PLACED ON THE TOP OF A CUBE OF 50 MM LONG EDGES. DRAW ISOMETRIC VIEW OF THE PAIR.

SOLUTION HINTS.

TO DRAW ISOMETRIC OF A CUBE IS SIMPLE. DRAW IT AS USUAL.

BUT FOR PYRAMID AS IT'S BASE IS AN EQUILATERAL TRIANGLE, IT CAN NOT BE DRAWN DIRECTLY. SUPPORT OF IT'S TV IS REQUIRED.

SO DRAW TRIANGLE AS A TV, SEPARATELY AND NAME VARIOUS POINTS AS SHOWN
AFTER THIS PLACE IT ON THE TOP OF CUBE AS SHOWN.

THEN ADD HEIGHT FROM IT'S CENTER AND COMPLETE IT'S ISOMETRIC AS SHOWN.

University Question Papers

www.FirstRanker.com

Subject Code: R13109/R13

Set No - 1

I B. Tech I Semester Regular/Supplementary Examinations Jan./Feb. - 2015
ENGINEERING DRAWING

(EEE)

Time: 3 hours**Max. Marks: 70**

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw the Isometric view assuming suitable data: fig.1

**Fig.1**

- (b) A pentagonal prism is resting on a corner of its base on the ground with a longer edge containing that corner inclined at 45° to the HP and the vertical plane containing that edge and the axis inclined at 30° to the VP. Draw its projections. Base 40 mm side, height 65 mm.

[14+8]

PART-B

- 2.(a) Construct a regular hexagon of side 28 mm when one side is horizontal.
(b) An area of 144 sq cm on a map represents an area of 36 sq km on the field. Find the RF of the scale for this map and draw a diagonal scale to show kilometers, hectameters and decameters and to measure up to 10 km. Indicate on the scale a distance of 7 km, 5 hectameters and 6 decameters.

[8+8]

Subject Code: R13109/R13

Set No - 1

- 3.(a) The Top view of a 75 mm long line measures 55 mm. The line is in the VP, its one end being 25 mm above the HP. Draw its projections.
 - (b) Draw the projections of the following points on the same ground line, keeping the projectors 25 mm apart.
 - (i) 40 mm above the HP and 25 mm in front of the VP
 - (ii) In the VP and 40 mm above the HP
 - (iii) 15 mm above the HP and 50 mm behind the VP
- [8+8]
4. The projectors drawn from the HT and the VT of a straight line AB are 80 mm apart while those drawn from its ends are 50 mm apart. The HT is 35 mm in front of the VP, the VT is 55 mm above the HP and the end A is 10 mm above the HP. Draw the projections of AB and determine its length and inclinations with the reference planes.

[16]
 5. A semicircular plate of 80 mm diameter has its straight edge in the VP and inclined at 45° to the HP. The surface of the plate makes an angle of 30° with the VP. Draw its projections.

[16]
 6. A square headed bolt 25 mm diameter, 125 mm long and having a square neck has its axis parallel to the ground and inclined at 45° to the VP.

[16]
 7. Draw (i) Front View (ii) Top View (iii) Side View fig.2

Fig.2

[16]

Set No - 2

I B. Tech I Semester Regular/Supplementary Examinations Jan./Feb. - 2015

ENGINEERING DRAWING

(EEE)

Time: 3 hours**Max. Marks: 70**

Question Paper Consists of **Part-A** and **Part-B**
 Answering the question in **Part-A** is Compulsory,
 Three Questions should be answered from **Part-B**

* * * * *

PART-A

- 1.(a) Draw (i) Front View (ii) Top View (iii) Left Hand Side View fig.1

Fig.1

- (b) A square pyramid, base 40 mm side and axis 90 mm long, has a triangular face on the ground and the vertical plane containing the axis makes an angle of 45° with the VP. Draw its projections.

[14+8]

PART-B

- 2.(a) Construct a Vernier scale of RF=1/80 to read inches and to measure up to 15 yards.
- (b) A car is running at a speed of 50 km/hour. Construct a diagonal scale to show 1 Kilometer by 3 cm and to measure up to 6 kilometers. Mark also on the scale the distance covered by the car in 5 minutes 28 seconds.

[8+8]

Subject Code: R13109/R13

Set No - 2

- 3.(a) Two points A and B are in the HP. The point A is 30 mm in front of the VP; While B is behind the VP. The distance between their projectors is 75 mm and the line joining their top views makes an angle of 45° with xy. Find the distance of the point B from the VP.
- (b) A line AB 25 mm long is parallel to VP and perpendicular to HP. Point A is 35 mm above HP and 20 mm in front of VP. Point B is 10 mm above HP. Draw the projections of the line AB. [8+8]
4. A line PQ 100 mm long is inclined at 30° to the HP and at 45° to the VP. Its midpoint is in the VP and 20 mm above the HP. Draw its projections, if its end P is in the third quadrant and Q in the first quadrant. [16]
5. Draw an equilateral triangle of 75 mm side and inscribe a circle in it. Draw the projection of the figure, when its plane is vertical and inclined at 30° to the VP and one of the sides of the triangle is inclined at 45° to the HP. [16]
6. Draw the projections of a cylinder, base 30 mm diameter and axis 40 mm long, resting with a point of its base circle on HP such that the axis is making an angle of 30° with HP and parallel to VP. [16]
7. Draw the Isometric view: fig.2 [16]

Fig.2

[16]

Subject Code: R13109/R13

Set No - 3

I B. Tech I Semester Regular/Supplementary Examinations Jan./Feb. - 2015

(EEE)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw the Isometric view: fig.1

Fig.1

- (b) A cylindrical block, 75 mm diameter and 25 mm thick, has a hexagonal hole of 25 mm side, cut centrally through its flat faces. Draw three views of the block when it has its flat faces vertical and inclined at 30° to the VP and two faces of the hole parallel to the HP.

[14+8]

PART-B

- 2.(a) Construct a regular polygon of any number of sides, given the length of its sides equal to 25 mm.
(b) The actual length of 500 m is represented by a line of 15 cm on a drawing. Construct a vernier scale to read upto 600 m. Mark on the scale a length of 549 m.
- 3.(a) A vertical line AB, 75mm long, has its end A in the HP and 25 mm in front of the VP. A line AC, 100 mm long, is in the HP and parallel to the VP. Draw the projections of the line joining B and C, and determine its inclination with the HP.
(b) A line CD 30 mm long is parallel to both the planes. The line is 40 mm above HP and 25 mm in front of VP. Draw its projections.

[8+8]

Subject Code: R13109/R13

Set No - 3

4. A line AB, 65 mm long, has its end A in the HP and 15 mm in front of the VP. The end B is in the third quadrant. The line is inclined at 35° to the HP and at 60° to the VP. Draw its projections. [16]
5. A 60° Set-square of 125 mm longest side is so kept that the longest side is in the HP making an angle of 30° with the VP and set square itself inclined at 45° to the HP. Draw the projections of the Set-square. [16]
6. A hexagonal pyramid, base 25mm side and axis 50mm long, has on edge of its base on the ground. Its axis is inclined at 30° to the ground and parallel to the VP. Draw its projections. [16]
7. Draw (i) Front View (ii) Top View (iii) Side View fig.2 [16]

Fig.2

Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw (i) Front View (ii) Top View (iii) Left Hand Side View fig.1

**Fig.1**

- (b) The top view of a plate, the surface of which is perpendicular to the VP and inclined at 60° to the HP is a circle of 60 mm diameter. Draw its three views.

[14+8]

PART-B

- 2.(a) Draw an Octagon given the length of side 25 mm.
(b) The major axis of an ellipse is 100 mm and the minor axis 55 mm. Find the foci and construct the ellipse by Intersecting Arcs method.
- 3.(a) A point 30 mm above xy line is the plan view of two points P and Q. The elevation of P is 45 mm above the HP. While that of the point Q is 35 mm below the HP. Draw the projections of the points and state their position with reference to the principle planes and the quadrant in which they lie.

[8+8]

Subject Code: R13109/R13**Set No - 4**

- 3.(b) A line PQ 40 mm long is parallel to VP and inclined at an angle of 30° to HP. The lower end P is 15 mm above HP and 20 mm in front of VP. Draw the projections of the line. [8+8]
4. The top view of a 75 mm long line AB measures 65 mm, while the length of its front view is 50 mm. It's one end A is in the HP and 12 mm in front of the VP. Draw the projections of the AB and determine its inclinations with the HP and the VP. [16]
5. A thin circular plate of 70 mm diameter is resting on its circumference such that its plane is inclined 60° to the HP and 30° to the VP. Draw the projections of the plane. [16]
6. A right circular cone of base diameter 50 mm and height 60 mm is placed such that one diameter AB of the base is inclined at 45° to HP and the other diameter CD of the base is parallel to both HP and VP. The diameters AB and CD are perpendicular to each other. Draw the projections of the cone. [16]
7. Draw the Isometric view: fig.2

**Fig.2**

[16]

Subject Code: R13109/R13

Set No - 1

I B. Tech I Semester Regular/Supplementary Examinations Jan./Feb. - 2015

ENGINEERING DRAWING

(Common to ECE, EIE, Bio-Tech, EComE, Agri.E)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw the Isometric view of fig.1:

Fig.1

- (b) Draw the projections of a circle of 50mm diameter resting in the HP on a point A on the circumference, its plane inclined at 45° to the HP and (i) the top view of the diameter AB making 30° angle with the VP (ii) the diameter AB making 30° angle with the VP.

[14+8]

PART-B

- 2.(a) Construct a regular pentagon of 30 mm side.
(b) The area of a field is 50,000 sq. m. The length and the breadth of the field, on the map are 10 cm and 8 cm respectively. Construct a diagonal scale which can read up to 1 m. Mark the length of 235 m on the scale. What is the RF of the scale?
- 3.(a) The front view of a line, inclined at 30° to the VP is 65mm long. Draw the projections of the line, when it is parallel to and 40 mm above the HP, its one end being 30 mm in front of the VP.

[8+8]

Set No - 2

I B. Tech I Semester Regular/Supplementary Examinations Jan./Feb. - 2015

ENGINEERING DRAWING

(Common to ECE, EIE, Bio-Tech, EComE, Agri.E)

Time: 3 hours**Max. Marks: 70**

Question Paper Consists of **Part-A** and **Part-B**
 Answering the question in **Part-A** is Compulsory,
 Three Questions should be answered from **Part-B**

* * * * *

PART-A

- 1.(a) Draw fig.1 (i) Front View (ii) Top View (iii) Side View

Fig.1

- (b) A plate having shape of an isosceles triangle has base 50 mm long and altitude 70 mm. It is so placed that in the front view it is seen as an equilateral triangle of 50 mm sides and one side inclined at 45° to xy. Draw its top view.

[14+8]

PART-B

- 2.(a) The major axis of an ellipse is 150 mm long and the minor axis is 100 mm long. Find the foci and draw the ellipse by arcs of circle method. Draw a tangent to the ellipse at a point on it 25 mm above the major axis.

Subject Code: R13109/R13

Set No - 2

- 2.(b) Draw a Vernier scale of RF=1/25 to read centimeters up to 4metres and on it, shown lengths representing 2.39 m and 0.91 m. [8+8]
- 3.(a) A point P is 20 mm below HP and lies in the third quadrant. Its shortest distance from xy is 40 mm. Draw its projections.
- (b) A line AB which is perpendicular to HP and 80mm long has its end B, 20mm below HP and 30mm in front of VP. Another line AC, which is 60mm long, is parallel to both HP and VP. The midpoint D of the line AC is joined to B. Draw the projections and determine the inclination of the line BD with HP. [8+8]
4. A line AB, inclined at 40° to the VP, has its ends 50 mm and 20 mm above the HP. The length of its front view is 65 mm and its VT is 10 mm above the HP. Determine the true length of AB, its inclination with the HP and its HT. [16]
5. An hexagonal lamina of 20 mm side rests on one of its corners on HP. The diagonal passing through this corner is inclined at 45° to HP. The lamina is then rotated through 90° such that the top view of this diagonal is perpendicular to VP and the surface is still inclined at 45° to HP. Draw the projections of the lamina. [16]
6. A tetrahedron of 40 mm side rests with one of its edges on HP and perpendicular to VP. The triangular face containing that edge is inclined at 30° to HP. Draw its projections. [16]
7. Draw the Isometric view fig.2:

Fig.2

[16]

Subject Code: R13109/R13

Set No - 3

I B. Tech I Semester Regular/Supplementary Examinations Jan./Feb. - 2015

ENGINEERING DRAWING

(Common to ECE, EIE, Bio-Tech, EComE, Agri.E)

Time: 3 hours**Max. Marks: 70**

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw the Isometric view assuming suitable data: fig.1

Fig.1

- (b) A thin $30-60^\circ$ set square has its longest edge in VP and inclined at 30° to HP. Its surface makes 45° with VP. Draw its projections.

[14+8]

PART-B

- 2.(a) An underpass of a flyover has a size of $270\text{ m} \times 10\text{ m} \times 10\text{ m}$. It is represented on a model by a volume of 8 cu.cm . What is the R.F? Construct a diagonal scale to read up to 300 m. Mark the distances 199 m and 8 m on the scale.
- (b) Construct an ellipse when the major axis is 120 mm and the distance between the foci is 108 mm. Determine the length of the minor axis.
- 3.(a) Two pegs fixed on a wall are 4.5 m apart. The distance between the pegs measured parallel to the floor is 3.6 m. If one peg is 1.5 m above the floor, find the height of the second peg and the inclination of the line joining the two pegs, with the floor.
- (b) A point P is 50 mm from both the reference planes. Draw its projections in all possible positions.

[8+8]

[8+8]

Subject Code: R13109/R13

Set No - 3

4. The guy ropes of two poles 12 m apart, are attached to a point 15 m above the ground on the corner of a building. The points of attachment on the poles are 7.5 m and 4.5 m above the ground and the ropes make 45° and 30° respectively with the ground. Draw the projections and find the distance of the poles from the building and the lengths of the guy ropes. [16]
5. Draw the projections of a circle of 75 mm diameter having the end A of the diameter AB in the HP, the end B in the VP, and the surface inclined at 30° to the HP and at 60° to the VP. [16]
6. Draw the projection of a cone, base 75mm diameter and axis 100 mm long and lying on the ground on one of its generators with the axis parallel to the VP. [16]
7. Draw fig.2 (i) Front View (ii) Top View (iii) Side View [16]

Fig.2

[16]

Subject Code: R13109/R13

Set No - 4

I B. Tech I Semester Regular/Supplementary Examinations Jan./Feb. - 2015

ENGINEERING DRAWING

(Common to ECE, EIE, Bio-Tech, EComE, Agri.E)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw fig.1 (i) Front View (ii) Top View (iii) Both Side Views

Fig.1

- (b) A thin circular metal plate of 54mm diameter has a square hole of 27 mm side, cut centrally through it. Draw its projections when the plate is resting on HP with its surface inclined at 30° to HP and an edge of the square hole perpendicular to VP.

[14+8]

PART-B

- 2.(a) A plot of a ground is in the shape of a rectangle $110\text{ m} \times 50\text{ m}$. Inscribe an elliptical lawn in it. Take a suitable scale.
- (b) Construct a diagonal scale of RF= 1: 32,00,000 to show kilometers and long enough to measure upto 400 kilometers. Show distance of 257 km and 333 km on your scale.
- 3.(a) A point A is situated in the first quadrant. Its shortest distance from the intersection point of HP, VP and auxiliary plane is 60 mm and it is equidistant from the principal planes. Draw the projections of the points and determine its distance from the principal planes.

[8+8]

Subject Code: R13109/R13**Set No - 4**

- 3.(b) The length of the top view of a line parallel to the VP and inclined at 45° to the HP is 5 cm. One end of the line is 1.2 cm above the HP and 2.5 cm in front of the VP. Draw the projections of the line and determine its true length. [8+8]
4. The projectors of the ends of a line AB are 5 cm apart. The end A is 2 cm above the HP and 3 cm in front of the VP. The end B is 1 cm below the HP and 4 cm behind the VP. Determine the true length and traces of AB, and its inclinations with the two planes. [16]
5. A circular plate of negligible thickness and 50 mm diameter appears as an ellipse in the front view, having its major axis 50 mm long and minor axis 30 mm long. Draw its top view when the major axis of the ellipse is horizontal. [16]
6. An hexagonal prism, side of base 25 mm and axis 50 mm long rests with one of its base corners on HP such that its base makes an angle of 60° to HP and its axis is parallel to VP. Draw its projections. [16]
7. Draw the Isometric view fig.2:

Fig.2

[16]

Subject Code: R13209/R13

Set No - 1

I B. Tech II Semester Regular Examinations August - 2014

ENGINEERING DRAWING

(Mechanical Engineering)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw the isometric view of the following orthographic projections?

- (b) A straight line AB, 60mm long, makes an angle of 30° to the HP and 60° to the VP. The end A is in the VP and 20mm above the HP. Draw the projections of the line AB?

[16+6]

PART-B

- 2.(a) Inscribe an ellipse in a parallelogram having sides 150mm and 100mm long and an included angle of 120° ?
- (b) Draw a full size diagonal scale to show 0.1 millimeters long enough to measure up to 5 centimeters. Show on this scale the following distances.
2.35 centimeters

I B. Tech II Semester Regular Examinations August - 2014

ENGINEERING DRAWING

(Mechanical Engineering)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

1.(a) Draw (i) Front view (ii) Top view and (iii) Side view of the pictorial drawing shown below?

- (b) A circular plate of negligible thickness and 50mm diameter appears as an ellipse in the front view, having its major axis 50mm long and minor axis 30mm long. Draw its top view when the major axis of the ellipse is horizontal.

[16+6]

PART-B

- 2.(a) A plot of ground is in the shape of a rectangle 110m×50m. Inscribe an elliptical lawn in it. Take a suitable scale?
- (b) Construct a regular hexagon of 40mm side. Using general method?

[8+8]

Subject Code: R13209/R13

Set No - 2

- 3.(a) Draw the FV, TV of the following points:
 (i) Point P lies in the HP and 20mm behind the VP
 (ii) Point Q lies in the VP and 30mm below the HP
 (iii) Point R lies 35mm below the HP and 25mm behind the VP
 (b) Two points M and N lie in the VP. The point M is above the HP and the point N is 40mm below the HP. The perpendicular distance between their projectors is 60mm. The line joining M and N makes 60° with XY. Draw the projections of the points. Find the height of point M from the HP? [8+8]
4. FV of a line measures 70mm and makes an angle of 30° with XY. The end A is in the HP and the VT of the line is 10mm below XY. The line is inclined at 45° to the VP. Draw the projections of the line and find its TL and true inclinations with the HP and locate the HT? [16]
5. A regular pentagonal lamina of 30mm sides has one edge in the HP and inclined at an angle of 30° to the VP. Draw its projections when its surface is inclined at 45° to the HP? [16]
6. A cone of diameter 60mm and height 60mm is resting on the HP on one of its generators. Draw its projections if its axis is parallel to the VP? [16]
7. Draw the isometric view of the orthographic projections shown below? [16]

Subject Code: R13209/R13

Set No - 3

I B. Tech II Semester Regular Examinations August - 2014

ENGINEERING DRAWING

(Mechanical Engineering)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw the isometric view of the following orthographic views?

- (b) A plate having shape of an isosceles triangle has base 50mm long and altitude 70mm. It is so placed that in the front view it is seen as an equilateral triangle of 50mm sides and one side inclined at 45° to xy. Draw its top view?

[16+6]

PART-B

- 2.(a) On a map, the distance between two points is 14 cm. The real distance between them is 20 km. Draw a diagonal scale of this map to read kilometres and hectametres, and to measure up to 25km. Show a distance of 17.6 km on this scale?
- (b) The major axis of an ellipse is 150mm long and the minor axis is 100mm long. Find the foci and draw the ellipse by Arcs of circles method. Draw a tangent to the ellipse at a point on it 25mm above the major axis?

[8+8]

Subject Code: R13209/R13

Set No - 3

- 3.(a) The front view of a line, inclined at 30° to the VP is 65mm long. Draw the projections of the line, when it is parallel to and 40mm above the HP, its one end being 30mm in front of the VP?
- (b) A stick is struck in the ground making an angle of 30° to the ground. Draw the projections of the free end of the stick if the end of the stick above the ground is 1.5m and the distance of the end from a wall is 2.5m.?
[8+8]
4. The end P of a line PQ 130mm long is 55mm in front of the VP. The HT of the line is 40mm in front of the VP and the VT is 50mm above the HP. The distance between HT and VT is 110mm. Draw the projections of the line PQ and determine its angles with the HP and the VP.
[16]
5. A triangular plane ABC has a 60mm long base AB and is on the ground inclined to the VP at 30° . Its altitude length is 80mm. the plane is lifted on AB such that AC lies on a plane perpendicular to both the HP and the VP. Draw the projections of the plane. Find out the angles of inclination of the plane with the HP and the VP?
[16]
6. Draw the projection of a cylinder 75mm diameter and 100mm long, lying on one of its generator on the ground with its axis inclined at 30° to the VP and parallel to the ground.
[16]
7. Draw (i) Front view (ii) Top view and (iii) Side view of the pictorial projection shown below?

Subject Code: R13209/R13

Set No - 4

I B. Tech II Semester Regular Examinations August - 2014

ENGINEERING DRAWING

(Mechanical Engineering)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw (i) Front view (ii) Top view and (iii) Side view of the pictorial projection shown below?

- (b) A thin 30° - 60° set square has its longest edge in the VP and inclined at 30° to the HP. Its surface makes 45° with the VP. Draw its projections?

[16+6]

PART-B

- 2.(a) Construct a vernier scale of RF=2 to show cm, $1/10^{\text{th}}$ of cm and $1/100^{\text{th}}$ of cm to read up to 9cm. Mark on the scale the lengths 7.02cm.?
- (b) Inscribe a regular octagon in a circle of diameter 80mm.?

[10+6]

Subject Code: R13209/R13

Set No - 4

- 3.(a) A line GH 45mm long is in the HP and inclined to the VP. The end G is 15mm in front of the VP. Length of front view is 35mm. Draw the projections of the line. Determine its inclination with the VP?
 - (b) The electric pole is 10m height. A mighty storm bent it in such a way that its tip is now at a distance of half of its original distance from the ground. Draw the projections of the pole tip if it is 3m from a wall of a building?
- [8+8]
4. The midpoint M of a straight line AB is 60mm above the HP and 50mm in front of the VP. The line measures 80mm long and inclined at an angle of 30° to the HP and 45° to the VP. Draw its projections?
- [16]
5. A rhombus having diagonals 150mm and 60mm is so placed that its smaller diagonal is parallel to both the reference planes and the larger diagonal is inclined at 40° to the HP. Draw its projections. Also, find the angles made by the plane with the HP and the VP?
- [16]
6. A hexagonal pyramid, base 25mm side and axis 50mm long, has an edge of its base on the ground. Its axis is inclined at 30° to the ground and parallel to the VP. Draw its projections.
- [16]
7. Draw the isometric view of the orthographic projections shown below?

[16]

Subject Code: R13209/R13

Set No - 1

I B. Tech II Semester Regular Examinations August - 2014

ENGINEERING DRAWING

(Computer Science Engineering)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw (i) Front view (ii) Top view (iii) Right side view of the following pictorial projection.

- (b) The projections of a line AB are on the same projector. A is 10mm above the HP and 20mm in front of the VP. B is 35mm below the HP and 25 mm behind the VP. Draw the projections of the line AB and determine its true length, inclinations with the HP and the VP?

[16+6]

PART-B

- 2.(a) Construct an ellipse of 120 mm major axis and 80 mm minor axis using concentric circle methods?
(b) Draw an octagon given the length of side 25 mm. using general method?
- 3.(a) A line EF 40mm long is in the VP and inclined to the HP. The top view measures 30mm. The end E is 10mm above the HP. Draw the projections of the line. Determine its inclination with the HP?
(b) A line RS 40mm long is parallel to both the planes. It is 20 mm above the HP and 15mm in front of the VP. Draw the projections of the line?

[10+6]

Subject Code: R13209/R13**Set No - 1**

4. The front view of a line AB is 50mm long and it makes an angle of 35° with xy. The point A lies 10mm above the HP and 25mm behind the VP. The difference between the distance of A and B from the VP is 25mm. The line AB is in second quadrant. Draw the projections of the line; determine its true length and inclinations with the HP and the VP? [16]
5. An equilateral triangle ABC having side length as 50 mm is suspended from a point O on the side AB 15mm from A in such a way that the plane of the triangle makes an angle of 60° with the VP. The point O is 20 mm below the HP and 40 mm behind the VP. Draw the projections of the triangle? [16]
6. Draw the top and front view of the cone of base diameter 46mm and height 65mm lying with one of its generators on the HP. The axis is parallel to the VP? [16]
7. Draw the isometric view of orthographic drawing shown below ? [16]

Subject Code: R13209/R13

Set No - 2

I B. Tech II Semester Regular Examinations August - 2014

ENGINEERING DRAWING

(Computer Science Engineering)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw the isometric view of the following orthographic views ?

- (b) A square prism of side of base 30 mm and axis 55 mm long lies on one of its generator in the HP and its faces equally inclined to the HP. Draw its projections when its axis is inclined at an angle of 60° to the VP?

[16+6]

PART-B

- 2.(a) Construct a regular hexagonal of side 25mm when one of its side is horizontal?
(b) A truck is moving at the rate of 1.2 km per min. Construct a diagonal scale with RF value of $1/25000$, showing minutes and seconds. Mark the distance moved by the truck in 4 minutes and 27 seconds?
- 3.(a) Draw the projections of the following, keeping the distance between the projectors as 25mm on the same reference line:
(i) A- 25mm above HP and 50mm behind the VP
(ii) B- 40 mm below HP and 45mm in front of the VP
(iii) C- on HP and 25mm behind VP
(b) A line CD is parallel to the VP and inclined at 45° to the HP. C is in the HP and 25 mm in front of the VP. Top view is 50mm long. Find its true length?

[6+10]

[8+8]

Subject Code: R13209/R13

Set No - 2

4. A line AB inclined 30° to the VP, has its ends 50mm and 20mm above the HP. The length of its front view is 65mm and its VT is 10 mm above the HP. Determine the true length of AB, its inclination with the HP and its HT? [16]
5. The circular plate of negligible thickness and 50 mm diameter appears as an ellipse in the front view, having its major axis 50mm long and minor axis 30 mm long. Draw its top view when the major axis of the ellipse is horizontal? [16]
6. A equilateral triangle of 60mm side represents the front view of a cone standing on its base. It is tilted until its axis makes 30° with the HP and top view of the axis is parallel to the VP in this position. Draw the projections of cone? [16]
7. Draw (i) Front view (ii) Top view (iii) Side view of the following pictorial projection? [16]

[16]

Subject Code: R13209/R13

Set No - 3

I B. Tech II Semester Regular Examinations August - 2014

ENGINEERING DRAWING

(Computer Science Engineering)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw the isometric view of the following orthographic projections?

- (b) A point A is 15mm above the HP and 20mm in front of the VP. Another point B is 25 mm behind the VP and 40mm below the HP. Draw the projections of A and B, keeping the distance between the projectors equal to 90mm. Draw straight lines joining (i) the top views (ii) the front views.

[16+6]

PART-B

- 2.(a) Inscribe a regular hexagon in a circle of diameter 80 mm.?
(b) Construct an ellipse of 120 mm major axis and 80 mm minor axis using arcs of circle method?
- 3.(a) A point A is 20mm above the HP and in the first quadrant. Its shortest distance from the reference line XY is 40mm. Draw the projections of the point and determine its distance from the VP.
(b) Draw the projections of line LM 40 mm long, parallel to the HP and inclined at 30° to the VP. The L is 20 mm above the HP and 15 mm in front of the VP. Find its traces.

[8+8]

Subject Code: R13209/R13**Set No - 3**

4. A line AB, 65mm long, has its end A 20 mm above the HP and 25 mm in front of the VP. The end B is 40mm above the HP and 65mm in front of the VP. Draw the projections of AB and show its inclinations with the HP and the VP? [16]
5. A 30° - 60° set square has its shortest side 50 mm long and is in the HP. The top view of the set-square is an isosceles triangle. The hypotenuse of the set-square is inclined at an angle of 45° with the VP. Draw its projections Determine its inclination with the HP? [16]
6. Draw the projections of a cylinder, base 30mm diameter and axis 50mm long, resting with a point on the periphery of its base circle on the HP such that the axis is making an angle of 30° with the HP and parallel to the VP? [16]
7. Draw (i) Front view (ii) Top view of the following pictorial view? [16]

[16]

Subject Code: R13209/R13

Set No - 4

I B. Tech II Semester Regular Examinations August – 2014

ENGINEERING DRAWING

(Computer Science Engineering)

Time: 3 hours

Max. Marks: 70

Question Paper Consists of **Part-A** and **Part-B**
Answering the question in **Part-A** is Compulsory,
Three Questions should be answered from **Part-B**

PART-A

- 1.(a) Draw (i) Front view (ii) Top view (iii) Right side view of the pictorial view shown below?

- (b) A mirror of size 560mm × 320 mm is fixed on a wall on one of its shorter edges. The mirror is so fixed that it appears as a square in the front view. Draw the projections of the mirror. Find its inclinations with the wall and the ground?

[16+6]

PART-B

- 2.(a) Construct a Vernier scale of RF= 1: 25 to show decimeters, centimeters and millimeters. The scale should be capable of reading up to 4 decimeters. Mark on your scale the following distances: (a) 3.23 dm?
- (b) Construct a hexagon of side 30 mm when one side is vertical?

[10+6]

Subject Code: R13209/R13

Set No - 4

- 3.(a) The top view of a 75mm long line measures 55 mm. The line is in the VP, its one end being 25 mm above the HP. Draw its projections?
- (b) Mark the projections of the following points on a common reference line, keeping the projectors 35 mm apart.
 - (i) 25 mm above the HP and 40 mm behind the VP
 - (ii) 20 mm above the HP and on the VP
 - (iii) 30 mm below the HP and 45 mm in front of the VP
4. A line PQ 100mm long is inclined at 30° to the HP and at 45° to the VP. Its midpoint is in the VP and 20mm above the HP. Draw its projections, if its end P is in the third quadrant and Q is in the first quadrant.
5. ABCD is a symmetrical trapezium with AB= 40mm and CD=64mm as its parallel sides are 50 mm height. The plane has its side AB in the VP and CD 25 mm away from it. The front view of BC makes an angle of 30° with the HP. Obtain the projections of the plane. Find its angle with the VP?
6. Draw the projections of a pentagonal prism of base side 30mm and axis length 60mm rests on the HP on one of the base corners with the base edges containing it being equally inclined to the HP. The axis is inclined at 45° to the HP and parallel to the VP?
7. Draw the isometric view of the following orthographic views?

V.S.M. COLLEGE OF ENGINEERING, RAMACHANDRAPURAM
(AFFILIATED TO JNTU-K)
I/IV B.TECH. SEMESTER-II **MID-II**(Regular R-13)

SUBJECT: ENGINEERING DRAWING (Computer Science Engineering)

TIME: 1H. 30MIN.

MARKS: 30

Answer all Questions

10 * 3 = 30

1. A circle of 50 mm diameter is resting on Hp on end A of it's diameter AC which is 30° inclined to Hp while it's Tv is 45° inclined to Vp. Draw it's projections. ?
2. Draw the projections of a pentagonal prism , base 25 mm side and axis 50 mm long, resting on one of its rectangular faces on the H.P. with the axis inclined at 45° to the V.P?
3. Draw the orthographic projections of the following structure

Subject: ENGG. DRAWING

Max. Marks : 30

Answer all the following questions

1. The distance between Delhi and Agra is 200 km. In a railway map it is represented by a line 5 cm long. Find its R.F. Draw a diagonal scale to show single km. And maximum 600 km. Indicate on it following distances. 1) 222 km 2) 336 km 3) 459 km 4) 569 km
2. A point P is 20mm below HP & lies in third quadrant. Its shortest distance from XY is 40mm. Draw its projections and find the distance of TV from XY line.
3. Line AB 75mm long makes 45° inclination with Vp while its Fv makes 55° . End A is 10 mm above Hp and 15 mm in front of Vp. If line is in 1st quadrant draw its projections and find its inclination with Hp.

Subject: ENGG. DRAWING

Max. Marks : 30

Answer all the following questions

1. Draw a Vernier scale of $RF = 1 / 25$ to read centimeters upto 4 meters and on it, show lengths 2.39 m and 0.91 m
 2. Mark the projections of following points n a comman reference line,keeping the projections 35mm apart.
 - i.A,25mm above HP and 35 mm in front of VP
 - ii.B,25 mm below HP and 40mm behind VP
 - iii.C,35mm below HP and on VP
 - iv.D,20mm behind VP and on HP.
 3. Line AB is 75 mm long and it is 30^0 & 40^0 Inclined to Hp & Vp respectively.End A is 12mm above Hp and 10 mm in front of Vp.Draw projections. Line is in 1st quadrant.

I B.TECH II SEM MID-I EXAMINATIONS

SUBJECT: ENGINEERING DRAWING

BRANCH: CSE

DATE: 11/04/2015

ANSWER THE FOLLOWING QUESTIONS:

Max Marks: 30 Marks

- 1) Draw a vernier scale of R.F = $1/25$ to read centimeters up to 4 metres and on it, show lengths representing 2.39 m and 0.91 m.
- 2) a) Draw the projections of following points on the same ground line, keeping the projectors 25 mm apart.
 - i) A, in the H.P and 25 mm in front of V.P
 - ii) B, 40 mm above the H.P and 25 mm in front of the V.P
 - iii) C, 25 mm below the H.P and 25 mm behind the V.Pb) A point A is 20mm below HP and lies in third quadrant. It's shortest distance from XY is 40mm. Draw its projections?
- 3) A line AB, 75 mm long is inclined at 45 degrees to the H.P. and 30 to the V.P. its end B is in the H.P and 40 mm in front of the V.P. draw its projections?
