MBA I Semester Supplementary Examinations December/January 2017/2018
BUSINESS STATISTICS
(For students admitted in 2014, 2015 \& 2016 only)
Time: 3 hours
Max. Marks: 60

SECTION - A<br>(Answer the following: ( $05 \times 10=50$ Marks)<br>(Statistical tables is permitted in the examination hall)

The distribution of marks of 1628 students of an entrance examination is given below.

| Marks: | $30-40$ | $40-50$ | $50-60$ | $60-70$ | $70-80$ | $80-90$ | $90-100$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency: | 110 | 240 | 360 | 540 | 210 | 90 | 78 |

Find mean, median and mode.

## OR

The runs scored by two players in 6 test matches are given below.

| Player A: | 65 | 100 | 140 | 0 | 40 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Player B: | 75 | 80 | 80 | 90 | 80 | 75 |

Calculate coefficient of variation and suggest who is a consistent player.

Find the pearson's correlation coefficient between ages of software professionals and their monthly salaries from the following data.

| Age: | 30 | 36 | 35 | 29 | 26 | 39 | 33 | 28 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Salary (Rs in 000s): | 62 | 54.5 | 67 | 64.5 | 55 | 58 | 54.5 | 45 |
| OR |  |  |  |  |  |  |  |  |

The data regarding shelf space available in 12 shops selling bakery items and snacks and the weekly sales (Rs in 000s) is given below.

| Shelf space (in cubic feet): | 4 | 9 | 14 | 9 | 4 | 9 | 14 | 19 | 19 | 19 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sales (Rs in 000s): | 80 | 95 | 115 | 120 | 110 | 130 | 135 | 145 | 130 | 165 |

(i) Find the regression line of sales on shelf space.
(ii) Calculate sales when shelf space is 10 cubic feet.

The students who come for interview are either engineering graduates or science graduates. Out of 900 students who come for interview 600 are engineering graduates. An engineer clears the interview with probability 0.3 and a science graduate with probability 0.15 .
(i) Find the probability that a student attending the interview clears it.
(ii) A student has cleared the interview. What is the probability that he is an engineering graduate? OR
A top business school wants to admit only $2 \%$ of the students who attend interview. It is found that marks of interview follow a normal distribution with a mean of 70 and standard deviation of 12 . What mark should a student get in interview so that he gets admission?
$60 \%$ of people who were served in Delhi asserted that corruption is the most important issue affecting India's progress. $55 \%$ of 150 people in Chennai made the same assertion. Test whether there is any difference in the perception of people in Delhi and Chennai regarding corruption in India at 5\% significance level.

## OR

The average daily wages of 15 labourers engaged in construction sector in Tamilnadu is Rs. 300 with standard deviation of Rs. 25 . The average daily wages of 10 labourers engaged in construction in Karnataka is Rs. 325 with a standard deviation of Rs. 35 . Test whether the daily wages in the two states is different at $5 \%$ significance level.

9 The contingency table gives the number of defective parts produced during various shifts in a factory.

| Shift | Good | Defective |
| :---: | :---: | :---: |
| Morning | 952 | 48 |
| Noon | 898 | 62 |
| Night | 840 | 60 |

Test whether the number of defective parts and the production shift are independent at a significance level of $5 \%$.

## OR

A small public sector bank merged with a large public sector and some of the employees of the small bank were not satisfied and thin satisfaction level is measured in $0-100$ point scale. The satisfaction level of 10 employees before and after the merge were measured.

| Before | 74 | 77 | 68 | 68 | 47 | 81 | 44 | 68 | 81 | 72 |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| After | 77 | 72 | 76 | 65 | 42 | 71 | 52 | 64 | 70 | 77 |

Test whether the merger has decreased the satisfaction level of employees of the smaller bank. Take $\alpha=0.05$.

## SECTION - B

(Compulsory question, $01 \times 10=10$ Marks)

## Case Study:

A chain of restaurants in a city wants to compare 3 of its restaurants regarding the service time per customer. One of the owners visited the 3 restaurants during the peak hours and noted the service time for 5 customers in each of the three restaurants.

Table: Service time in minutes

| Restaurant | Restaurant |  |
| :---: | :---: | :---: |
| 1 | 2 | Restaurant |
| 1 | 3 | 2 |
| 3 | 4 | 3.5 |
| 4 | 5.5 | 5 |
| 5.5 | 2.5 | 6.5 |
| 3.5 | 3 | 6 |
| 4 |  |  |

The problem is to test whether the average service time in 3 restaurants are significantly different.
