M. Tech – I year I Sem. (Transportation Engineering)

TRAFFIC ENGINEERING AND MANAGEMENT
(PC-1)

Course Objectives:

- This unit of study aims to introduce you to basic principles of traffic, volume studies, methods of volume counts, speed & delay studies. Presentation of speed data, headway & gap acceptance will be discussed briefly.
- Provide grounding in techniques for analyzing transport problems and developing and implementing policies and measures for resolving such problems.
- This course focuses on *traffic*, its properties, measurement, simulation and control. It starts with traffic flow variables and their measurement. Traffic flow and queuing theory is introduced.
- Survey methods and data analysis techniques required by traffic engineers are presented.
- Attention is given to the management of different road user groups, including pedestrians of different abilities, buses, trams and cycles, leading to a critical examination of the arguments behind traffic segregation and integration. Methods for the assessment of traffic engineering schemes are presented.

Course Outcomes: At the end of the course, the student will be able to:

- Estimate basic characteristics of traffic stream
- Conduct traffic studies and analyze traffic data
- Design traffic signal systems
- Determine the capacity of highways
- Evaluate the transportation system & identify measures to improve situations

Unit - I:
Traffic Studies (Part- I) : Basic principles of Traffic, Volume, Speed and Density; Definitions and their interrelationships; Traffic Volume studies - Objectives, Methods of Volume counts, Presentation of Volume Data; Speed studies- Types of Speeds, Objectives, Methods of speed studies, Statistical Methods for speed data Analysis, Presentation of speed data. Delay Studies; Head ways and Gap Studies - Headway and Gap acceptance, Origin and Destination Studies.

Unit - II:
Traffic Studies (Part-II) : Parking Studies: parameters of parking, definitions, Parking inventory study, Parking survey by Patrolling method; Analysis of Parking Survey data; Accident studies- Causative factors of Road accidents, Accident data collection: Accident analysis and modeling;, Road Safety Auditing, Measures to increase Road safety.

Unit - III:
Capacity and LOS Analysis: Introduction to Traffic capacity, Analysis concepts, Level of Service, Basic definitions, Factors affecting Capacity and LOS, Capacity of Urban/Rural Highway, With or without access control, Basic freeway segments - Service flow rate of LOS, Lane width or Lateral clearance adjustment; Heavy vehicle adjustment; Driver population adjustment.

Unit - IV:
Signal Designing – Fixed Time signals, Determination of Optimum Cycle length and Signal setting for Fixed Time signals, Warrants for Signals, Time Plan Design for Pre-Timed Control- Lane group

analysis, Saturation flow rate, and Adjustment factors, Uniform and Incremental Delay, Vehicle Actuated Signals, Signal Coordination.

Unit - V:

Transportation System Management-Measures for Improving vehicular flow – one way Streets, Signal Improvement, Transit Stop Relocation, Parking Management, Reversible lanes- Reducing Peak Period Traffic - Strategies for working hours, Congestion Pricing, Differential Toll Policies**.**

M. Tech – I year I Sem. (Transportation Engineering)

URBAN TRANSPORTATION PLANNING AND MANAGEMENT
(PC-2)

Course Objectives:
The course introduces students to the fundamentals of urban transportation planning and the types of skills and knowledge that transportation planners need. It further familiarizes students with contemporary transportation planning issues and methods of analysis. The course is highly relevant regardless if students intend to focus on transportation itself, or other aspects of urban planning.

Transportation decisions impact many aspects of urban life. Young and old alike are affected by the viability and relative ease of travelling to destinations on foot, by bike, transit, or reliance on private vehicles. Transportation investments are arguably the single largest shaper of urban spaces and of development patterns. The safety, speed, and comfort for a particular mode of travel are a function of the investments that have been made in specific types of travel options.

The perspectives of a variety of experts in our region who are engaged in making transportation planning decisions implemented, major highway expansions are planned and being implemented; and considerable investments are proposed and underway in non-motorized infrastructure.

Relationships between transportation and urban land use systems and new tools to address environmental and quality of life impacts of transportation are presented. Transportation investment decisions (or lack thereof) have been held accountable for increased economic prosperity or spiraling economic decline.

Course Outcomes: At the end of the course, the student will be able to:

- Identify urban transportation problems.
- Estimate urban travel demand.
- Plan urban transport networks.
- Identify urban transport corridors.
- Prepare urban transportation plans

Unit - I:
Introduction: Role of transportation in the economic development of nations, overview of transport modes, growth trends, National Transport Policy of India – Case studies, transportation planning in the developing world; and comparative international transportation policies; Fundamentals of transportation , Principles of planning, evaluation, selection, adoption, financing, and implementation of alternative urban transportation systems; formulation of community goals and objectives, inventory of existing conditions; transportation modeling trip generation, distribution, modal choice, assignment

Unit - II:
Data Collection And Inventories: Collection of data – Organization of surveys and Analysis, Study Area, Zoning, Types and Sources of Data, Road Side Interviews, Home Interview Surveys, Commercial Vehicle Surveys, Sampling Techniques, Expansion Factors, Accuracy Checks, Use of Secondary Sources, Economic data – Income – Population – Employment – Vehicle Owner Ship.

Unit - III:
Travel Demand issues: Trends, Overall Planning process, Long term Vs Short term planning, Demand Function, Independent Variables, Travel Attributes, Assumptions in Demand Estimation,

Detailed approach on 4 step travel demand estimation; Sequential, and Simultaneous Approaches, Aggregate and Disaggregate Techniques.

Unit - IV:

Demand and supply planning : Planning for sustainable urban mobility, positive and negative externalities in urban transport, congestion pricing, parking policy, demand management , Urban travel and transportation system characteristics – a systems perspective, Data management and use in decision making , Demand analysis , Urban activity analysis, Supply analysis; Plan Preparation And Evaluation: Travel Forecasts to Evaluate Alternative Improvements, Impacts of New Development on Transportation Facilities. Master plans, Selection of Corridor, Corridor Identification, Corridor deficiency Analysis

Unit - V:

Metropolitan cities: Design issues in urban mobility, integrating land use and transport planning; Overview of urbanization process, city structure and urban activity and infrastructure systems, Economic and social significance of urban infrastructure systems; Transport's Role in tackling Social Inclusion, Economic Impacts of Transport Policy

M. Tech – I year I Sem. (Transportation Engineering)

PAVEMENT MATERIAL CHARACTERIZATION
(PC-3)

Course Objectives:
The main objective of this course is to provide students with a thorough understanding of the important factors in pavement design and analysis. The focus will be on practices of pavement design and maintenance used by highway agencies.

Course Outcomes: At the end of the course, students will be able to

- Determine the proportions of ingredients required for the mix design of both asphalt mixtures and cement concrete.
- Characterize the pavement materials including soil, aggregate, asphalt, cement, asphalt mixtures, cement concrete.
- Select appropriate asphalt binder for construction of a flexible pavement depending upon the traffic and climatic conditions.
- Choose appropriate stabilization technique for pavement

Unit - I:
Subgrade Soil Characterization: Properties of subgrade layers; different types of soils, Mechanical response of soil; Soil Classification; Index and other basic properties of soil; A critical look at the different laboratory and in-situ procedures for evaluating the mechanical properties of soils viz. SPT, DCPT, CPT, CBR, Plate Load test &resilient modulus; Suitability of different type of soil for the construction of highway embankments and pavement layers; Field compaction and control. Dynamic properties of soil: FWD test.

Unit - II:
Introduction to Soil Stabilization: Physical and Chemical modification: Stabilization with admixtures like cement, lime, calcium chloride, fly ash and bitumen. Grouting: Categories of grouting, Art of grouting, Grout materials, Grouting techniques and control. Introduction to Ground improvement techniques; Introduction to Geo textiles and synthetics applications.

Unit - III:
Aggregate Characterization: Origin, Classification, Types of aggregates; Sampling of aggregates; Mechanical and shape properties of aggregates, Aggregate texture and skid resistance, polishing of aggregates; Proportioning and Blending of aggregates: Super pave gradation, Fuller and Thompson's Equation, 0.45 power maximum density graph; Use of locally available materials in lieu of aggregates.

Unit - IV:
Bitumen and Bituminous Concrete Mix Characterization: Bitumen sources and manufacturing, Chemistry of bitumen, bitumen structure, Rheology of bitumen, Elastic modulus, Dynamic modulus, visco-elastic and fatigue properties, creep test, stiffness modulus of bitumen mixes using shell nomographs; Resilient, Diametral Resilient and Complex (Dynamic) Moduli of Bituminous Mixes, Permanent Deformation Parameters and other Properties. Modified bitumen: Crumb Rubber Modified bitumen, Natural rubber modified bitumen, polymer modified bitumen; Introduction to emulsified bitumen and its characterization; Long term and short term ageing and its effect on bitumen performance, Tests to simulate ageing of bitumen viz. RTFOT and PAV.

Desirable properties of bituminous mixes, Design of bituminous mixes: Modified Marshall's specifications, Hubbard Field method of mix design, Hveem's method of mix design; Introduction to super pave mix design procedure

Unit - V:

Cement and Cement Concrete Mix Characterization:

Types of cements and basic cement properties, Special cements; Quality tests on cement; Tests on cement concrete including compressive strength, flexural strength, modulus of elasticity and fatigue properties; Introduction to advanced concretes like self compacted concrete, Light weight concrete, Roller Compacted Concrete for pavement application; IS method of cement concrete mix design with case studies; Role of different admixtures in cement concrete performance; Joint fillers for Jointed Plain Cement Concrete Pavements and their characterization; Nano technology applications in cement concrete.

M. Tech – I year I Sem. (Transportation Engineering)

ENGINEERING OF GROUND
(PE-1)

Course Objectives:
This course will provide a introduction to the design and philosophy of geotechnical site investigations and a legislation element incorporating contaminated land. Students will learn about the range of exploration and testing techniques available to geotechnical engineers. Students will also learn how investigations are planned and how the results of investigations relate to the design process.

Course Outcomes: At the end of the course, students will be able to

- Identify ground conditions and suggest method of improvement
- Design and assess the degree of improvement
- Understand the principles of soil reinforcement and confinement in engineering Constructions
- Design reinforced soil structures

UNIT-I
Introduction to Engineering Ground Modification: Need and objectives, Identification of soil types, In situ and laboratory tests to characterize problematic soils; Mechanical, Hydraulic, Physico-chemical, Electrical, Thermal methods, and their applications.

UNIT-II
Mechanical Modification – Deep Compaction Techniques- Blasting Vibrocompaction, Dynamic Tamping and Compaction piles.

UNIT-III
Hydraulic Modification – Objectives and techniques, traditional dewatering methods and their choice, Design of dewatering system, Electro-osmosis, Electro-kinetic dewatering.
Filtration, Drainage and Seepage control with Geosynthetics, Preloading and vertical drains,

UNIT-IV
Physical and Chemical Modification – Modification by admixtures, Shotcreting and Guniting Technology, Modification at depth by grouting, Crack Grouting and compaction grouting, Jet grouting, Thermal Modification, Ground freezing.

UNIT-V
Modification by Inclusions and Confinement - Soil reinforcement, reinforcement with strip, and grid reinforced soil. In-situ ground reinforcement, ground anchors, rock bolting and soil nailing.

M. Tech – I year I Sem. (Transportation Engineering)

TRANSPORTATION SYSTEM MANAGEMENT
(PE-1)

Course Objectives:

- Discuss various principle types of bus and rail transit vehicles, their differing operating environments and how they affect urban street design.
- Discuss existing guidelines for urban street geometric design for bus and rail transit services.
- Identify specific geometric design considerations, design requirements and impacts for on-street running bus, LRT and streetcar operations.
- Describe considerations for off-street bus and rail operation including trackway width and clearance requirements, street crossings, and access to and from stations.

Course Outcomes: At the end of the course, students will be able to

- Understand TSM, the need for TSM and the objectives of TSM.
- Understand the types of TSM strategies.
- Apply a strategy based on a TSM goal or objective.
- Recommend methods to manage a transit system to improve its management efficiency.
- Understand transportation demand management (TDM), various TDM strategies, and their applicability.
- Recommend a detailed transportation demand management strategy for a transportation system based on a goal or objective.

UNIT-I

TSM philosophy: System approach to Transportation Planning; Long Term Strategies and Short Term Measures; TSM actions- Objectives and Philosophy; Relevance of TSM actions Indian Urban context. Board Spectrum of TSM actions. Measures for Improving vehicular flow – one way Streets, Signal Improvement, Transit Stop Relocation, Parking Management, Reversible lanes- Reducing Peak Period Traffic - Strategies for working hours, Congestion Pricing, Differential Toll Policies.

UNIT-II

Measures to promote transit: Preferential Treatment to high Occupancy Vehicles; Car Polling; Transit Service Improvement Measures; Transit Management Improvement Measure; Transit and Para transit integration; Para Transit Role in urban areas; Multi-Modal Coordination.

UNIT-III

Bus Route Network Planning and Management: Type of Bus Route Networks; Suitability for a given Urban Area; Types of routes – Corridor routes, activity routes and residential routes; issues in route networks evaluation – number of route, length of route; route alignment methods; service coverage and accessibility index.

UNIT-IV

Promotion of Non – Auto modes: Measures to promote non-auto modes; Pedestrianisation; Bicycle Transportation - advantages; Planning Bicycle Facilities - class I, Class II and Class III bikeways; Junction Treats for cycle tracks; LOS criteria for Pedestrian and bicycle Facilities.

UNIT-V

Advanced Transit Technologies: Conventional and Unconventional Systems; Rapid Transportation System; New technologies – LRT, monorail, Automated Highways- Hovercraft; System Characteristics and Suitability.

M. Tech – I year I Sem. (Transportation Engineering)

BRIDGE ENGINEERING
(PE-1)

Course Objective: To impart knowledge on the behavior and design aspects of various types of bridges.

Course Outcome: The learner will be able to analyze and design of different types of bridges.

UNIT - I
Concrete Bridges: Introduction-Types of Bridges-Economic span length-Types of loading-Dead load-live load-Impact Effect-Centrifugal force-wind loads-Lateral loads-Longitudinal forces-Seismic loads-Frictional resistance of expansion bearings-Secondary Stresses-Temperature Effect-Erection Forces and effects-Width of roadway and footway-General Design Requirements.

UNIT - II
Solid slab Bridges: Introduction-Method of Analysis and Design.

UNIT - III
Girder Bridges: Introduction-Method of Analysis and Design-Courbon's Theory, Grillage analogy

UNIT - IV
Pre-Stressed Concrete Bridges: Basic principles-General Design requirements-Mild steel reinforcement in prestessed concrete member-Concrete cover and spacing of pre-stressing steel-Slender beams-Composite Section-Propped-Design of Propped Composite Section-Unproped composite section-Two-stage Prestressing-Shrinking stresses-General Design requirements for Road Bridges.

UNIT - V.
Analysis of Bridge Decks: Harmonic analysis and folded plate theory-Grillage analogy- Finite strip method and FEM. Sub-structure of bridges: Substructure- Beds block-Piers- Pier Dimensions- Design loads for piers- Abutments- Design loads for Abutments.

TEXT BOOKS:
1. Essentials of Bridge Engineering by Johnson Victor, Oxford & IBH
2. Design of Bridges by N. KrishnaRaju, Oxford & IBH

M. Tech – I year I Sem. (Transportation Engineering)

HIGHWAY GEOMETRIC DESIGN
(PE-2)

Course Objectives:
This module seeks to cover the principles of transportation infrastructure design in the wider context of the civil engineering profession. The design and execution of large transport infrastructure projects is a multi-layered exercise, with this module aiming to provide an overview of the key stages involved. Students attending this module will develop a good command of the concepts involved in geometric design of intersections, horizontal & vertical alignment of roads & pedestrian facilities.
Recognize the history and evolution of transportation in cities.

Describe the urban street hierarchy and functional classification system.

Formulate a functional design process that accommodate the needs of all users and allows for street designs that are compatible with the surrounding area. Identify the factors that influence urban street design. Demonstrate the relationship between mobility and access. Identify and define the elements of a roadway cross-section. Discuss concepts related to the roadway design speed. Recognize design elements including street user; design vehicles; design speed. Discuss alignment and grade elements including sight distance; horizontal and vertical curves; and terrain and acceptance grades for urban local and collector streets. Describe usage of traffic control devices on urban local and collector streets
Identify the factors important in the design of driveways, shoulders and sidewalks for urban local and collector streets.Define the functional area of an intersection. Identify key design elements for intersections. Describe benefits and disadvantages of turn lanes and turn lane geometric characteristics. Identify pedestrian street crossing issues. Recognize design features outside of the travel way that can affect intersection design. List signal components that affect intersection design.

Course Outcomes: At the end of the course, the student will be able to:

- Design the longitudinal and cross sectional elements of a highway.
- Design the intersections, interchanges, and parking facilities.
- Design the facilities for bicyclists and pedestrians.
- Design parking facilities.
- Understand the facilities & standards design.

Unit - I:
Functional Classification of Highway System; Design Controls – Topography, Driver characteristics, Vehicle Characteristics, Traffic, Capacity and Level of Service, Design Speed. Objectives of Geometric Design, Cross Section Elements: Design specifications; Pavement Surface characteristics – Skid Resistance, Road Roughness; Camber, Objectives, design standards. Specifications for hill roads.

Unit - II:
Horizontal Alignment of Roads: Sight Distances – Stopping Sight Distance, Overtaking Sight Distance and Intermediate Sight Distance ; Objectives of horizontal curves; Super elevation; Extra- widening on Curves; Transition Curves – Objectives and Design. Transition Curve setting methods, Introduction to MX Roads software.

Unit - III:
Vertical Alignment of Roads: Gradients – Types of Gradients, Design Standards; Vertical Curves – Summit Curves, Valley Curves and Design criteria for Vertical Curves; Importance of Sight Distances for Horizontal and Vertical Curves ; Combination of Vertical and Horizontal Curves – Grade Compensation

Unit - IV:
Geometric Design of Intersections :Types of Intersections; Design Principles for Intersections; Design of At-grade Intersections – Channelization, Objectives; Traffic Islands and Design standards; Rotary Intersection – Concept, Advantages and Disadvantages; Grade separated Interchanges – Types, warrants and Design standards.

Unit - V:
Miscellaneous Elements: Requirements of Pedestrians; Pedestrian facilities on Urban Roads; Cycle Tracks – Guidelines and Design standards; Bus bays –Types and Guide lines; Design of On-street and Off street Parking facilities – Guidelines for lay out Design, Traffic Signs and Markings.

ADVANCED CONCRETE TECHNOLOGY
(PE-2)

Course Objectives:

This course will provide the students with state-of-the art knowledge on durable and sustainable cement and concrete, on the various mineral additions and chemical admixtures to enhance the workability, strength, durability and sustainability of concrete, and will empower them in the decision making process regarding the various concrete products, construction procedures and performance test methods that will improve the durability and sustainability of concrete civil infrastructure.

This course will empower students to become technical leaders in the concrete .The materials science aspects of concrete production will be explored in the context of various performance criteria with emphasis on durability and sustainability. The process of material selection, proportioning, mixing, transporting, placing and curing concrete will be the main focus, augmented with technology of admixtures use; green cements and concrete products.

This comprehensive course is designed to provide students with an in-depth understanding of the fundamentals of concrete. Covered in detail is information about constituent materials, specification and production, concrete properties and performance as well as basic practical applications. The course is widely acknowledged by industry as the first step in obtaining a recognised qualification for candidates with some prior knowledge or experience in the field.

Course Outcomes:

- Identify Quality Control tests on concrete making materials
- Understand the behavior of fresh and hardened concrete
- Design concrete mixes as per IS and ACI codes
- Understand the durability requirements of concrete
- Understand the need for special concretes
- Design form work

UNIT-I

Concrete Making Materials : Cement – Bogus Compounds – Hydration Process – Types of Cement – Aggregates – Gradation Charts – Combined Aggregate – Alkali Silica Reaction – Admixtures – Chemical and Mineral Admixtures.

UNIT-II

Fresh and Hardened Concrete: Fresh Concrete – workability tests on Concrete – Setting Times of Fresh Concrete – Segregation and bleeding.

Hardened Concrete: Abrams Law, Gel space ratios, Maturity concept – Stress strain behavior – Creep and Shrinkage – Durability Tests on Concrete – Non Destructive Testing of Concrete.

UNIT-III

High Strength Concrete – Microstructure – Manufacturing and Properties – Design of HSC Using Erintroy Shaklok method – Ultra High Strength Concrete.

High Performance Concrete – Requirements and Properties of High Performance Concrete – Design Considerations

UNIT-IV

Special Concretes: Self Compacting concrete, Polymer Concrete, Fibre Reinforced Concrete – Reactive Powder Concrete – Requirements and Guidelines – Advantages and Applications.

Concrete Mix Design: Quality Control – Quality Assurance – Quality Audit - Mix Design Method – BIS Method – DOE Method – Light Weight Concrete, Self Compacting Concrete.

UNIT-V

Form work – materials – structural requests – form work systems – connections – specifications – design of form work – shores – removal for forms - shores – reshoring – failure of form work.

M. Tech – I year I Sem. (Transportation Engineering)

ROAD SAFETY ENGINEERING
(PE-2)

Course Objectives:

- This module on the fundamental of traffic engg & some of the statistics methods to analysis the traffic safety.
- The accident interrogations 7 risk involved with measures to identity the causes are dealt.
- The role of road safety in planning the urban infrastructures design is discussed.
- The varies traffic management system for safety & safety improvement strategies are dealt.

Course Outcomes: The student is able to

- To understand fundamental of Traffic Engg.
- To investigate & determine the collective factors & remedies of accident involved.
- To design & planning various road geometrics.
- To massage the traffic system from road safety point of view.

Unit - I:

Fundamentals of Traffic Engineering - Basic Characteristics of Motor-Vehicle Traffic, Highway Capacity, Applications of Traffic Control Devices, Traffic Design of Parking Facilities, Traffic Engineering Studies; Statistical Methods in Traffic Safety Analysis – Regression Methods, Poisson Distribution, Chi- Squared Distribution, Statistical Comparisons.

Unit - II:

Accident Investigations and Risk Management, Collection and Analysis of Accident Data, Condition and Collision Diagram, Causes and Remedies, Traffic Management Measures and Their Influence on Accident Prevention, Assessment of Road Safety, Methods to Identify and Prioritize Hazardous Locations and Elements, Determine Possible Causes of Crashes, Crash Reduction Capabilities and Countermeasures, Effectiveness of Safety Design Features, Accident Reconstruction

Unit - III:

Road Safety in Planning And Geometric Design: Vehicle And Human Characteristics, Road Design and Road Equipments, Redesigning Junctions, Cross Section Improvements, Reconstruction and Rehabilitation of Roads, Road Maintenance, Traffic Control, Vehicle Design and Protective Devices, Post Accident Care

Unit - IV:

Role of Urban infrastructure design in safety: Geometric Design of Roads; Design of Horizontal and Vertical Elements, Junctions, At Grade and Grade Separated Intersections, Road Safety in Urban Transport, Sustainable Modes and their Safety.

Unit - V:

Traffic Management Systems for Safety, Road Safety Audits and Tools for Safety Management Systems, Road Safety Audit Process, Approach to Safety, Road Safety Improvement Strategies, ITS and Safety.

6. Road Safety by NCHRP.

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD

M. Tech – I year I Sem. (Transportation Engineering)

TRANSPORTATION ENGINEERING LAB - I

Learning outcomes

- Characterize the pavement materials
- Perform quality control tests on pavements and pavement materials
- Conduct test on Aggregate & bitumen

1. Test on soil –

iv. Soil Consistency test, Sieve Analysis
v. CBR test
vi. Compaction of Soil
vii. Standard Proctor test

2. Test on Aggregate

i. Shape test
ii. Impact and crushing tests on aggregate
iii. Abrasion and Attrition test
iv. Soundness test

3. Tests on Bitumens

i. Viscosity, Penetration, Ductility tests
ii. Flash and fire point tests
iii. Rolling thin film test, Bitumen extraction tests

4. Test on Bitumen & Concrete mix – i) Design of Cement Concrete Mix for Highway
ii) Marshal Stability Mix Design
