M. Tech in GEOTECHNICAL ENGINEERING Effective from Academic Year 2019 - 20 admitted batch

R19 COURSE STRUCTURE AND SYLLABUS

I YEAR I – SEMESTER

Course Code	Course Title	L	т	Ρ	Credits
Professional	Advanced Soil Mechanics	3	0	0	3
Core - I					
Professional	Advanced Foundation Engineering	3	0	0	3
Core - II		Ŭ	Ŭ	Ũ	Ũ
Professional Elective - I	1. Soil Structure Interaction				
	2. Ground Improvement Techniques	3	0	0	3
	3. Theoretical Soil Mechanics				
Professional Elective - II	1. Applied Statics				
	2. Environmental Geotechnology	3	0	0	3
	3. Environmental impact Assessment				
Lab - I	Advanced Geotechnical Engineering Lab – I	0	0	4	2
Lab - II	Geotechnical Computational Lab	0	0	4	2
MC	Research Methodology and IPR	2	0	0	2
Audit - I	Audit Course - I	2	0	0	0
	Total Credits	16	0	8	18

I YEAR II – SEMESTER

I YEAR II – SEMESTER									
Course Code	Course Title	L	т	Ρ	Credits				
Professional Core - III	Soil Dynamics and Machine Foundations	3	0	0	3				
Professional Core - IV	Subsurface Investigations and Instrumentation	3	0	0	3				
Professional Elective - III	 Offshore Geotechnical Engineering Design of substructures Engineering rock mechanics 	3	0	0	3				
Professional Elective - IV	 Earth Retaining Structures Geotechnics for Infrastructures Physical and Constitutive Modeling on Geomechanics 	3	0	0	3				
Lab - III	Rock Mechanics & Geosynthetics Laboratory	0	0	4	2				
Lab - IV	Advanced Geotechnical Engineering Lab –II	0	0	4	2				
	Mini Project with Seminar	0	0	4	2				
Audit - II	Audit Course - II	2	0	0	0				
	Total Credits	14	0	12	18				

Audit Course 1 & 2:

- 1. English for Research Paper Writing
- 2. Disaster Management
- 3. Sanskrit for Technical Knowledge
- 4. Value Education
- 5. Constitution of India
- 6. Pedagogy Studies
- 7. Stress Management by yoga
- 8. Personality Development Through Life Enlightenment Skills

ADVANCED SOIL MECHANICS (PC – I)

Course objectives:

- 1. To Analyze the field loading conditions and predict the behavior of soil under loading and unloading condition in drained and untrained conditions of soil
- 2. To predict the probable seepage from the reservoir and for checking the stability of the structure under hydro dynamic conditions
- 3. To determine various application-based parameters of consolidation for safe design of structures on clay soils

Course Outcomes: At the end of the course, student will be able to;

- 1. Understand the behavior of soils stress paths and to determine the shear parameters under different load and drainage condition
- 2. Estimate Seepage and numerical modeling of Steady and transient flow condition
- 3. Determine Compressibility characteristics of NCC and OCC soils

UNIT- I

Geostatic Stresses & Stress Paths: Stresses within a soil mass: Concept of stress for a particulate system, Effective stress principle, Geostatic stresses, Soil water hydraulics: Principal stresses and Mohr's circle of stress, Stress paths; At Rest earth pressure, Stress paths for different practical situations.

UNIT- II

Flow through soils: Permeability, seepage, mathematical analysis – Finite difference formulae for steady state and transient flows – flow nets – computation of seepage – uplift pressure, and critical hydraulic gradient.

UNIT- III

Compressibility and Consolidation: One dimensional compression, Oedometer test, parameters – coefficient of volume change, constrained modulus, compression index, swell or unloading, maximum past consolidation stress, Over consolidation ratio, Primary and secondary compression, consolidation -One, two- and three-dimensional problems, Consolidation of partially saturated soils, Creep/Secondary Compression in soils.

UNIT- IV

Stress-Strain-Strength Behaviour of soils: Shear strength of soils; Failure criteria, drained and undrained shear strength of soils. Significance of pore pressure parameters; Determination of shear strength; Drained, Consolidated Undrained and Undrained tests; Interpretation of triaxial test results. Behaviour of sands; Critical void ratio; dilation in soils;

UNIT- V

Critical State Soil Mechanics: Critical state parameters; Critical state for normally consolidated and over consolidated soil; Significance of Roscoe and Hvorslev state boundary surfaces; Yielding, Bounding Surfaces.

- 5. Atkinson J. H. An Introduction to the Mechanics of Soils and Foundation through critical state soil mechanics, McGraw- Hill Co. (1993)
- 6. Wood, D.M.- Soil Behavior and Critical State Soil Mechanics. Cambridge university press (1991)

www.FirstRanker.com

ADVANCED FOUNDATION ENGINEERING (PC - II)

Course Objectives:

- 1. To interpret and select the design parameters from the test data
- 2. To analyze and design shallow and pile foundations
- 3. To abreast with advanced techniques of foundation analysis and design

Course Outcomes: At the end of the course, student will be able to:

- 1. Able to plan and select the soil exploration methods
- 2. Determine the Bearing capacity of soil and settlements for the design of shallow foundations
- 3. To design the deep foundations under different loading conditions
- 4. To design the foundations on problematic soils and reliability-based design for shallow and deep foundations

UNIT- I

Soil Exploration: Exploration Methods; Planning the Exploration Program; Boring and Sampling; In Situ Tests: Standard & Cone Penetration Tests, Field Vane & Borehole shear tests, Dilatometer, Pressure meter; Rock Sampling, Core Recovery, RQD; Geophysical Exploration; Preparation of Soil Report.

UNIT- II

Shallow Foundations: **Bearing Capacity:** - General Formulae; Effect of Water Table; Footings with eccentric or Inclined Loads, Foundations on Layered Soils, on finite layer with a Rigid Base at Shallow Depth, effect of compressibility of soil.

UNIT- III

Settlement: Components – Immediate, Consolidation & Creep, Stresses and Displacements in Homogeneous, Layered and Anisotropic Soils; Consolidation Settlement; One, Two- & Three-Dimensional Consolidation; Secondary Compression Settlement; Bearing Pressure using SPT, CPT, Dilatometer and Pressure meter; Settlement of foundations on Sands - Schmertmann and Burland & Bus bridge methods; Structure Tolerance to Settlement and Differential Settlements, Rotation of Tall Structures.

UNIT- IV

Deep Foundations: **Single Pile**: Vertically loaded piles, Static capacity α , β and λ Methods, Dynamic formulae; Point Bearing Resistance with SPT and CPT Results; Bearing Resistance of Piles on Rock; Settlement; Pile Load Test; Uplift Resistance; Laterally Loaded Piles -Ultimate Lateral Resistance; Negative Skin Friction; Batter Piles; Under Reamed Piles; Ultimate Capacity of Pile Groups in Compression, Pullout & Lateral Load; Efficiency; Settlements of Pile Groups; Interaction of Axially & Laterally Loaded Pile Groups.

UNIT- V

Special Topics of Foundation Engineering

Foundations on Collapsible Soils: Origin and occurrence, Identification, Sampling and Testing, Preventive and Remedial measures.

Foundations on Expansive Soils: The nature, origin and occurrence, Identifying, testing and evaluating expansive soils, typical structural distress patterns and Preventive design & construction measures.

Introduction to Reliability-Based Design: Methods, LRFD for structural strength requirements, LRFD for geotechnical strength requirements, Serviceability requirements.

SOIL STRUCTURE INTERACTION (PE - I)

Course Objectives:

- 1. To understand soil structure interaction.
- 2. To analyse the stress-strain behavior of soils
- 3. To estimate interaction parameters under static and dynamic conditions
- 4. To analyse the foundations resting on soil as beam-plate on elastic foundation

Course Outcomes: At the end of the course, student will be able to:

- 1. Apply different soil response models for specific problem based on the
- 2. requirement.
- 3. Analyze footings/rafts resting on soil as beams/plates on elastic foundation and work out design bending moments/shear and displacements.
- 4. Estimate interaction parameters under static and dynamic loading conditions
- 5. Understand the effect of structure on foundation ground response for various loading

UNIT-I

Soil-Foundation Interaction: Introduction to soil-foundation interaction problems, Soil behaviour, Foundation behaviour, Interface behaviour, Scope of soil foundation interaction analysis, soil response models, Winkler, Elastic continuum, Two parameter elastic models, Elastic-plastic behaviour, Time dependent behaviour.

UNIT-II

Beam on Elastic Foundation- Soil Models: Infinite beam, Two-parameters models, Isotropic elastic halfspace model, Analysis of beams of finite length, combined footings.

UNIT-III

Plates on Elastic Continuum: Thin and thick rafts, Analysis of finite plates, Numerical analysis of finite plates.

UNIT-IV

Analysis of Axially and Laterally Loaded Piles and Pile Groups: Elastic analysis of single pile, Theoretical solutions for settlement and load distributions, Analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap, Load deflection prediction for laterally loaded piles, Subgrade reaction and elastic analysis, Interaction analysis, Pile-raft system.

UNIT-V

Ground-Foundation-Structure Interaction: Effect of structure on ground-foundation interaction, Static and dynamic loads.

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD M.TECH.- I YEAR- I SEMESTER GEOTECHNICAL ENGINEERING GROUND IMPROVEMENT TECHNIQUES (PE – I)

Course objectives:

- 1. To select suitable ground improvement techniques for problematic soils.
- 2. To select suitable mechanical and hydraulic modifications.
- 3. To evaluate suitable physical and chemical modifications.
- 4. To adept soil reinforcement techniques.

Course Outcomes: At the end of the course, student will be able to:

- 1. Understand, Analyse and Apply the mechanical and hydraulic ground improvement
- 2. methods for problematic soils
- 3. Apply Physical and Chemical Modification techniques to improve the in-situ soil
- 4. Design suitable ground improvement methods using reinforcement technique

UNIT- I

Introduction to Engineering Ground Modification: Need and objectives, Identification of soil types, In situ and laboratory tests to characterize problematic soils; Mechanical, Hydraulic, Physico-chemical, Electrical, Thermal methods, and their applications.

UNIT- II

Mechanical Modification – Deep Compaction Techniques- Blasting Vibrocompaction, Dynamic Tamping and Compaction piles.

UNIT- III

Hydraulic Modification – Objectives and techniques, traditional dewatering methods and their choice, Design of dewatering system, Electro-osmosis, Electro-kinetic dewatering. Filtration, Drainage and Seepage control with Geosynthetics, Preloading and vertical drains.

UNIT- IV

Physical and Chemical Modification – Modification by admixtures, Shotcreting and Guniting Technology, Modification at depth by grouting, Crack Grouting and compaction grouting, Jet grouting, Thermal Modification, Ground freezing.

UNIT- V

Modification by Inclusions and Confinement - Soil reinforcement, reinforcement with strip, and grid reinforced soil. In-situ ground reinforcement, ground anchors, rock bolting and soil nailing.

- 1. Hausmann, M. R. (1990) Engineering Principles of Ground Modifications, McGraw Hill publications
- 2. M. P. Moseley and K. Krisch (2006) Ground Improvement, II Edition, Taylor and Francis
- 3. Koerner, R. M (1994) Designing with Geosynthetics Prentice Hall, New Jersey
- 4. Jones C. J. F. P. (1985) Earth Reinforcement and soil structures Butterworths, London.
- 5. Xianthakos, Abreimson and Bruce Ground Control and Improvement, John Wiley & Sons, 1994.
- 6. K. Krisch & F. Krisch (2010) Ground Improvement by Deep Vibratory Methods, Spon Press, Taylor and Francis
- 7. Donald P Coduto Foundation Design Principles and Practices, 2nd edition, Pearson, Indian edition, 2012.

THEORETICAL SOIL MECHANICS (PE - I)

Course Objectives:

- 1. To impart knowledge required for computing stress and settlement at any point in the semiinfinite elastic soil medium, anisotropic medium and layered deposits due to foundation loads.
- 2. To evaluate the stability of foundations, slopes, cuts and retaining structures both for the conditions of undrained and drained loading through theorems of plastic collapses.

Course OUTCOME: At the completion of the course, the students will be able to

- 1. Decide the type of mathematical models to be used for analyzing the behavior of soil mass at critical state
- 2. Understand the elastic and plastic behavior of soils under various loads.
- 3. Analyze and evaluate stress deformation behavior for various loads and subsoil conditions.

UNIT- I

Theory of Elasticity: Basic concepts, definitions and notations of stress & strain components – Generalized Hooke's Law, Equilibrium and Compatible conditions in Cartesian, Polar coordinates – Principal stresses and strains

UNIT- II

Theory of Plasticity: Ideal Plastic substance strain hardening – yield criteria – Tresca, & Van Mises, Mohr & Coulomb, Drucker-Prager theories, Critical State Soil Mechanics, – applications to soil mechanics problems.

UNIT- III

Stresses and Displacements due to Surface and Subsurface Loads – Boussinesq, Cerutti, Mindlin Solutions, Stresses and Displacements in Finite Layer & Multi-Layered Systems. Stress-path methods; Rotation of Foundations.

UNIT- IV

Critical state & constructive behavior of soils – introduction to yield criteria, constructive modeling.

UNIT- V

Underground Structures: Stresses and Displacements around Underground Openings unlined and lined tunnels.

- 1. Poulos, H. G. & Davis, E. H. "Elastic Solutions for Soil and Rock Mechanics, John Wiley and Sons, New York, 1974
- 2. Das, B. M. Principles of Foundation Engineering 5th Edition Nelson Engineering (2004)
- 3. Harr, M.E. "Foundations of Theoretical Soil Mechanics" Mc Graw-Hill, 1966.
- 4. Atkinson J. H. An Introduction to the Mechanics of Soils and Foundation through critical state soil mechanics, McGraw- Hill Co. (1993)
- 5. Wood, D.M.- Soil Behavior and Critical State Soil Mechanics. cambridge university press (1991)

APPLIED STATISTICS (PE - II)

Course Objectives:

- 1. To apply statistics in various areas of sampling, analysis and modeling.
- 2. To select the most common statistical tests and understand their assumptions and limitations.
- 3. To formulate and choose a suitable methodology for testing in a given situation.
- 4. To perform estimation in regression models and evaluate a proposed model.

Course OUTCOMES: At the end of the course, student will be able to:

- 1. Identify various methods of statistics to solve problems
- 2. Understand the different methods of probability and regression analysis
- 3. Analyse multiple data sets and sampling technique in statistics

UNIT-I

Introduction & Sampling Techniques: Histogram, Frequency diagram, Role of Probability and Statistics in Civil Engineering, Skewness; Kurtosis; Definitions and Applications; Simple random sampling; Stratified sampling; Systematic sampling; Sample Size determination; Collection & Presentation of data, Design of Experiment.

UNIT-II

Statistical Distributions and Probability: Random Variability, conditional probability, Uniform, Binomial, Poisson, Exponential and Normal distributions; Fitting of distributions; Skewness and Kurtosis, Mean and variance; Chi-square test of goodness-of-fit; lognormal, Beta distribution Probability - Laws of Probability; Conditional probability and Independent events; Kolmogorov – Smirnov (K-S test) Laws of expectation.

UNIT-III

Regression And Correlation: Linear/non-Linear and multiple linear correlation analysis, Linear regression and correlation; Multiple correlation; Multiple correlation coefficient; Standard error of estimate; Analysis of Variance; Curvilinear regression;

UNIT-IV

Multi-Variate Data Analysis and Exact Sampling Distributions: Types of data; Basic vectors and matrices; Simple estimate of centroid, Standard deviation, Dispersion, Variance and covariance; Correlation matrices; Principal component analysis; Time series analysis. Exact Sampling Distributions - Chi-square distribution; Students T-distribution;

UNIT-V

Tests Of Significance & Confidence Interval Estimation & Statistical Testing – I & II: Large sample and small sample tests; Tests for single mean, Means of two samples, Proportions, two variances, two observed correlation coefficients, paired T-tests, Applications. Tests Of Significance & Confidence Interval – Intervals for mean, variance and regression coefficients; Tests of Hypothesis, goodness of fit test.

www.FirstRanker.com

ENVIRONMENTAL GEOTECHNOLOGY (PE - II)

Course Objectives:

- 1. To identify various sources of contamination and to characterize contaminated ground, solid waste.
- 2. To model the contaminant transport process.
- 3. To apply suitable ground remediation technique.
- 4. To identify waste disposal site and design of landfill components.

Course Outcomes: At the end of the course, student will be able to:

- 1. Identify various sources of contamination of ground and characterize contaminated ground and waste
- 2. Model the contaminant transport process
- 3. Understand the various remediation methods for contaminant ground and identify most appropriate method of remediation for different sites.
- 4. Understand the significance of components of landfills

UNIT-I

Sources and Site Characterization: Scope of Geoenvironmental Engineering, Various Sources of Contaminations, Need for contaminated site characterization; and Characterisation methods.

UNIT-II

Solid and Hazardous Waste Management: Classification of waste, Characterisation of solid wastes, Environmental Concerns with waste, waste management strategies.

UNIT-III

Contaminant Transport: Transport process, Mass-transfer process, Modeling, Bioremediation, Phytoremediation.

UNIT-IV

Remediation Techniques: Objectives of site remediation, various active and passive methods, remediation of NAPL sites, Emerging Remediation Technologies.

UNIT-V

Landfills: Types of landfills, Site Selection, Waste Containment Liners, Leachate collection system, Cover system, Gas collection system.

- 1. Phillip B. Bedient, Refai, H. S. & Newell C. J. Ground Water Contamination Prentice Hall Publications, 4th Edition, 2008
- 2. Sharma, H. D. and Reddy, K. R. Geoenvironmental Engineering, John Wiley & Sons (2004)

- 5. LaGrega, M. D., Buckingham, P. L. and Evans, J. C. Hazardous Waste Management, New York: McGraw-Hill, 2001

ENVIRONMENTAL IMPACT ASSESSMENT (PE - II)

UNIT - I

Introduction: Environment and its interaction with human activities - Environmental imbalances - Attributes, Impacts, Indicators and Measurements -Concept of Environmental Impact Assessment (EIA), Environmental Impact Statement, Objectives of EIA, Advantages and Limitations of EIA

UNIT - II

Environmental Indicators - Indicators for climate - Indicators for terrestrial subsystems - Indicators for aquatic subsystems - Selection of indicators - Socio-economic indicators - Basic information - Indicators for economy - Social indicators - Indicators for health and nutrition - Cultural indicators - Selection of indicators.

UNIT - III

Environmental issues in water resource development - Land use - Soil erosion and their short and long term effects - Disturbance and long term impacts - Changes in quantity and quality of flow - Sedimentation - Environmental impact assessment of water resource development structures - Case studies, Water Quality Impact Assessment - Attributes, Water Quality Impact Assessment of Water Resources Projects, Data Requirements of Water Quality Impact Assessment for Dams, Impacts of Dams on Environment, Case Studies.

UNIT - IV

Environmental Issues in Industrial Development: On-site and Off-site impacts during various stages of industrial development, Long term climatic changes, Green house effect, Industrial effluents and their impact on natural cycle, Environmental impact of Highways, Mining and Energy development.

UNIT - V

Methodologies for Carrying Environmental Impact Assessment: Overview of Methodologies Adhoc, Checklist, Matrix, Network, Overlays, Benefit Cost Analysis, Choosing A Methodology, Review Criteria.

- 1. Jain, R.K., Urban, L.V., Stracy, G.S., (1991), "Environmental Impact Analysis", Van Nostrand Reinhold Co., New York
- 2. Rau, J.G. and Wooten, D.C., (1996), "Environmental Impact Assessment", McGraw Hill Pub. Co., New York
- 3. UNESCO, (1987), "Methodological Guidelines for the Integrated Environmental Evaluation of Water Resources Development", UNESCO/UNEP, Paris
- 4. Canter, L.W., (1997), "Environmental Impact Assessment", McGraw Hill Pub. Co., New York.

ADVANCED GEOTECHNICAL ENGINEERING LAB - I (Lab - I)

Course Objectives: To determine the Index and Engineering properties of soils under different conditions.

Course Outcomes: At the end of the course, student will be able to

- 1. Conduct suitable laboratory tests based on the soil and its conditions,
- 2. Interpret the obtained soil test results
- 3. Identify obtained soil test results to apply for a specific Civil Engineering project.

List of Experiments:

- 1. Classification of soils
- 2. Hydrometer Analysis
- 3. Determination of insitu density by core cutter and sand replacement methods
- 4. Scale effect of permeability
- 5. Effect of compactive effort on compaction of different soils
- 6. Variation of CBR values for different soils in soaked and unsoaked conditions
- 7. Effect of saturation on shear parameters from direct shear tests (tests to be conducted in unsaturated as well as saturated condition)
- 8. Determination of shear parameters from unconfined compression tests
- 9. Determination of shear parameters from Triaxial Tests- UU Test
- 10. Triaxial Tests- CU Test with pore pressure

GEOTECHNICAL COMPUTATIONAL LAB (Lab – II)

Course Objectives: Using software student should be able

- 1. To determine bearing capacity of substrata and vertical stress distribution
- 2. To Analyze settlements of shallow foundations
- 3. To determine Load carrying capacity of piles
- 4. To check the stability of reinforced soil walls

Course Outcome: At the end of the course, student will be able to Identify, create and execute the geotechnical model to analyze, Evaluate and Design Geotechnical structures using developed / available software.

List of Experiments:

- 1. Presentation of field test data and borelog preparation
- 2. Bearing capacity of shallow foundations using different theories for different soils
- 3. Determination of Vertical Stress distribution under different loading conditions and planes
- 4. Settlement analysis of shallow foundations for different soils
- 5. Determination of Pile load carrying capacity under compression
- 6. Determination of lateral pile load capacity
- 7. Design of underreamed pile foundation
- 8. Design of Reinforced soil walls

www.FirstRanker.com

RESEARCH METHODOLOGY AND IPR

Prerequisite: None

Course Objectives:

- To understand the research problem
- To know the literature studies, plagiarism and ethics
- To get the knowledge about technical writing
- To analyze the nature of intellectual property rights and new developments
- To know the patent rights

Course Outcomes: At the end of this course, students will be able to

- Understand research problem formulation.
- Analyze research related information
- Follow research ethics
- Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
- Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.
- Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

UNIT-I:

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

UNIT-II:

Effective literature studies approaches, analysis, Plagiarism, Research ethics

UNIT-III:

Effective technical writing, how to write report, Paper. Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

UNIT-IV:

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

UNIT-V:

Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

ENGLISH FOR RESEARCH PAPER WRITING (Audit Course - I & II)

Prerequisite: None

Course objectives: Students will be able to:

- Understand that how to improve your writing skills and level of readability
- Learn about what to write in each section
- Understand the skills needed when writing a Title Ensure the good quality of paper at very first-time submission

UNIT-I:

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

UNIT-II:

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Introduction

UNIT-III:

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

UNIT-IV:

key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature,

UNIT-V:

skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions. useful phrases, how to ensure paper is as good as it could possibly be the first- time submission

DISASTER MANAGEMENT (Audit Course - I & II)

Prerequisite: None

Course Objectives: Students will be able to

- learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- critically understand the strengths and weaknesses of disaster management approaches,
- planning and programming in different countries, particularly their home country or the countries they work in

UNIT-I:

Introduction:

Disaster: Definition, Factors and Significance; Difference Between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.

Disaster Prone Areas in India:

Study of Seismic Zones; Areas Prone to Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post-Disaster Diseases and Epidemics

UNIT-II:

Repercussions of Disasters and Hazards:

Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts.

UNIT-III:

Disaster Preparedness and Management:

Preparedness: Monitoring of Phenomena Triggering A Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and Other Agencies, Media Reports: Governmental and Community Preparedness.

UNIT-IV:

Risk Assessment Disaster Risk:

Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival.

UNIT-V:

Disaster Mitigation:

Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India.

TEXT BOOKS/ REFERENCES:

- 1. R. Nishith, Singh AK, "Disaster Management in India: Perspectives, issues and strategies "New Royal book Company.

SANSKRIT FOR TECHNICAL KNOWLEDGE (Audit Course - I & II)

Prerequisite: None

Course Objectives:

- To get a working knowledge in illustrious Sanskrit, the scientific language in the world
- Learning of Sanskrit to improve brain functioning
- Learning of Sanskrit to develop the logic in mathematics, science & other subjects enhancing the memory power
- The engineering scholars equipped with Sanskrit will be able to explore the huge knowledge from ancient literature

Course Outcomes: Students will be able to

- Understanding basic Sanskrit language
- Ancient Sanskrit literature about science & technology can be understood
- Being a logical language will help to develop logic in students

UNIT-I:

Alphabets in Sanskrit,

UNIT-II:

Past/Present/Future Tense, Simple Sentences

UNIT-III:

Order, Introduction of roots,

UNIT-IV:

Technical information about Sanskrit Literature

UNIT-V:

Technical concepts of Engineering-Electrical, Mechanical, Architecture, Mathematics

TEXT BOOKS/ REFERENCES:

- 1. "Abhyaspustakam" Dr. Vishwas, Samskrita-Bharti Publication, New Delhi
