## IV B.Tech I Semester Supplementary Examinations, February/March - 2018 **OPTICAL COMMUNICATION**

(Electronics and Communication Engineering)

Time: 3 hours

Max. Marks: 70

Question paper consists of Part-A and Part-B Answer ALL sub questions from Part-A Answer any THREE questions from Part-B \*\*\*\*\*

## PART-A (22 Marks)

l.	a)	Mention the four advantages of OFC.	[4]
	b)	Write about micro bending and macro bending losses.	[4]
	c)	Differentiate the splicer and connector.	[3]
	d)	Discuss the concept of spontaneous emission in LED.	[3]
	e)	Write a brief notes on equilibrium numerical aperture.	[4]
	f)	What is WDM and explain its significance.	[4]
		1 0	

## **PART–B** (3x16 = 48 Marks)

2.	a)	A multimode step index fiber has a relative refractive index difference of 1% and core refractive index of 1.5. The number of modes operating at a wavelengthof1.3µmeteris 1100. Estimate the diameter of the fiber core.	[8]
	b)	Explain group delay and mode delay factor with reference to single mode fibers showing the relevant graph.	[8]
3.	a) b)	Explain the scattering and bending losses in optical fibers.	
		discuss its dependence on fiber length.	[8]
4.	a)	Describe the connector return loss in an optical fiber.	[8]
	D)	joint	[8]
5.	a) b)	Sketch and explain the fabry-petrot resonator cavity of a laser diode. A GaAs laser operating at 850 nm and 450 $\mu$ m length and refractive index $\eta$ =3.5. What are the frequency and wavelength spacing? If the half power point	[8]
		$\lambda o=2.5$ nm, what is the spectral width $\sigma$ of the gain?	[8]
6.	a) b)	With a schematic diagram explain the working of optical receiver. Discuss the possible sources of noise in optical receivers.	[8] [8]
7.	a) b)	Explain the significance of power budget and system margin. Following are the parameters of a point-to-point optical link: (i) Optical power launched: + 5dBm (ii) sensitivity of detector : -30dBm (iii) Source/detector connector loss : 1dB (iv) Length of optical cable : 55km (v) Cable attenuation : 0.3 dB/km (vi) Jumper cable loss : 2.5 dB (vii) Connector loss at each fiber joint : 1dB Assume two jumper cables and two cable joints. Compute the power margin of the line	[8]
