HUMAN HEALTH AND DISEASE

The state of complete physical, rnUntal and s Kial well beings is called health. Health simply does not simply means disease free condition or physical fitness. Health Is affected Lev-

- i. Genetic disorders
- II. Infection from microbes or other organisms.
- ill. Life style

Good health can be maintained by' Balanced diet. Personal hygiene, Regular exercise, Awareness about the disease and their effect,. Immunization against the infectious disease, Proper disposal of onstage, Control of vectors, and Maintenance of hyglenicfd.od and water.

- Thy diseases which are easily transmitted from infected person to healthy persons are called infectious disease and diseases which carnat be transmitted from one person to other are called non-infectious disease.
- •

Common Diseases in Humans

- The disease causing microorganisms like bacteria, virus.. fungus, protozoa, helrnirithes are called pathogen_
- The pathogen can enter the body try various means and multiply and interfere with normal vital writhes resulting In morphological and functional damage.

Name Of disease /test	Causal OrgiliniSrIIS	Symptoms	Effects
Typhoid / Widal test	50,frrPoto6f0 fnlhii	Sustained high fewer,	Intestinal perforation
-		weakrke54 stomach	and death may Oiccur in
		pain, constipation.	severe cases
Pneumonia	Streptococcus	Feyef, WCWWW. TougstR	A Nicel r geogined with
	prreumonicre and	and headache.	fluid leading to severe
	Haerriophks i'nficrenzne		problems In respiration.

www.FirstRanker.com

I congestion and arge of

Common cold	Rhino viruses	Nasal congestion and discharge, sorethroat, cough and headache,	Infect the nose and respiratory passage.
Malaria	Pkismodiurn(P. vino P. rnalarin and P. fr parurrh)	Chill and high fever recurring 3 to4 days_	ParaSirte frikiltiply Within liver cells and then attack the PECs.
Almioeb;gisls of 01,rnesbic dysentery	Entortmetito thIstoiletko	Constipation, abdominal pain. cramps, stool with mucous and blood clot_	Infect the large intestine_
AStariasis	Ascatis (Helminthesli	Internal bleeding, muscular pain,, fever, anemia etc.	Healthy person get infe ct through water. gege table etc.
'Elephantiasis or lilliarlo515	Wachereria (W. bancrofti and W. rrrarcryi)	Inflammation in the limiter limb and genital largals.	Lvmphatic vessels of lower limbs get blacked.
Ring virerms	iivfirrospoirtun, Thichophylco and Epiderrirmphytpri	Appearance of ciryr scaly lesitim on various part of holly%	Infects the skin. nail and scalp.

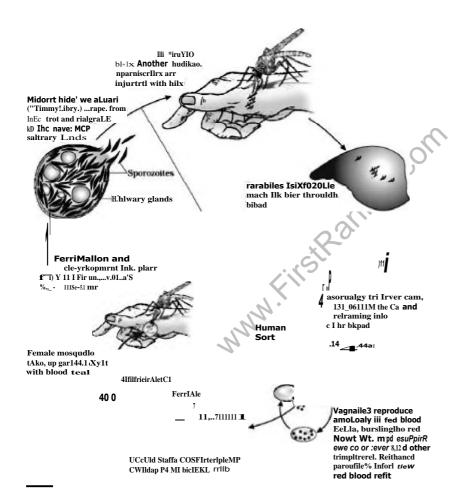

Life cycle of plasmixlium

Plasmodium enters the human body as small sporozoites through the bite of it female anopheles mosquito and multiplies within the lever cells. Later attacks the RRCs resulting the rapture with release of toxic skibstance, haarnomin, which is responsible for high fever and chill recurring every three to four clays_ www.FirstPanker.com

Malarial parasite requires two parasites, human and anopheles mosquito to complete their life cycle. Female anopheles is vector of thi5 disease to human beings_

Immunity — the ability of host cells to fight the disease causing microorganism due to Immune system is called immunity. There are twich types of immunity.

Innate Immunity. nori.specific types of defence. !presents at the time of birth and provide differvnit kinds of barriers to the entry of foreign agents into the body_ it consists of four types of barrier-

- **1.** Physical barrier. skin. MUCUS ooatirg of epithelium lining the respiratory, gastrointestInaland kimigenital tram
- 2. Physiological barrier. acid In stomach and saliva In mouth.
- 3_ Ce<u>llular harrier·leucocytes, neutmphils, monacytes.</u> Opetokline barriers. virus Infected cells secretes protein called interferon,

www.FirstRanker.com

+ Acquired Immunity- pathogen specific defence characterised by mernonl_ When our body encounters a

www.FirstRanker.com

pathogen first time produces a response called primary nmponse of low intensity. Subsequent encounter by same pathogen produce highly intensified response called secondary response or an arrinestic response due to memory of first encounter.

- Primary and secondary responses are carried out with the help of El.lyrnphocytes and T. lymphocytes..
 B-Iym phocytes produce army of protein called antibodies each having two light and two heavy chains_
- + Different types of antibodies produce in blood iriclude 10, IgM IgE etc_ They are tailed hurnoral immune response due to presence in Wood-

· · · ·	
Active Immunity	Rankin. immurilty
 Antibodies are pro lured in the host body_ It Is slow and takes time to gives It full effective response. 	 1_ Ready made antibodies are directly given o protectthe body. 2_ It is i t and act quickly in response to hogen,
	S

Allergies -

The exaggerated response of immune system, to certain antigens present in the environment is called allergy. The substance to which such immune response is produced. Is called allergens. The antibodies produced to these are IgE types. Allergy is Clue to secretion of chemicals like histamine and serotonin from the mask

Human immune system can distinguish between self and foreign molecules or foreign bodies. Sometimes, due. to genetic or unknown reasons. the body attack self-cells. This results in damage to the body and called auto-immune disease. 'Rheumatoid arthritis is due to this effect,

Immune sAjestern in the body- the human immune system includes lymphoid organs, tissue, cells ail cl soluble molecules like antibodies.

- Lymphoid organs are the organs where origin and maturation and proliferation of lymphocytes occur.
 Primary lymphoid organs include bon* marrow and thyMigS.
- *Alto"* maturation lymphoitytes migrate *to* setondarf lymphoid organ like spleen, lymph nodes, tonsils, peyers patches of small intestine and appendix. They provide the sites for interaction lymphixyte with a ntigerks.
- There Is lymphoid tissue also located within the lining of respiratory, digestive and urogen ital tract called mucosal associated lymphoid tissue (MALTIL It constitute SO% of lymphoid tissues in human

AIDS A.cquired Immune Deficiency Syndrome.) was first reported in 19131. It is caused by HIV (human Irnmuno deficiency virus", a retroInrus. Trarysm ission of HIV virus occurs by-

- 1_ Sexual contact with infected person
- 2. Transfusion. of contaminated blood and blood products
- 3 Sharing infected needles as in intravenous drug abusers
- 4. Infected mother to her child through placenta.

www.FirstRanker.com

Diagnostic test for AIDS is ELISA (enzyme-linked Immuno-sorbent assayll.

NACO (national AIDS control organisation) and other INGOrs are doing .3 Pot to educate people about AIDS.

Cancer is one 01 the rnest dreaded diseases of human beings and is a major .cause of death all over the world. Normal cells show a property called contact inhibition by virtue of which contact with other cells inhibit their uncontrolled growth. cancer cells lost this property.

Cancerous cells continue to divide giving rise to masses of cells called tumors. There are two kind so tumors-

- Benign tumors- remain confined to original location and do not spread to other parts of the body.
- Malignant tumors- cells grows rapidly, invading and damaging the surrounding normal tissues.
 Metastasis is the most dangerous property of these tumors.
- Causes of Cancer _ cancerous neoplastic cell may be induced by physical. chemical and biological agents called carcinogens_ Cancer causing viruses called or cogenic virus have gene called viral oncoge nes.
- A Cancer detection and diagnosis- Cancer detection is based on biopsy and hiStaPath010,gical study of the tissue blood and hone marrow test for increased cell counIB. Radiography, CT {computed tomography), RIM fm.agrbetic resonance imaging) are very useful to cancers of internal organs.
- Treatment of Cancer- the cornrion method for treatment of cancer includes surgery., radiation therapy and immunotheimpy. Several chemotherapeutic drugs are used to kill cafiCer04115 cells. They have side effects like loss of hair, anaemia- Biological response modifiers such as interferon which activate theirimmune system_

Drugs end Alcohol Abuse

Commonly abused drugs include opioids.. cannabinoids and coca alkaloids obtained from flowering plants and a few from fungi.

- Oplolds are the drugs which bind to specific opiolds receptors present in our central nervous system and gastrointestinal tract. Heroin commonly called smack is chemically cliacetykrnorphine which is a villhite, odourless, bitter crystalline compound. It is extracted from the latex of poppy plant .1Popaver scfnrriferum).
- O Canna binoicls are a group of chemicals vyhic..h Interact with can na biroold receptors present In the brain. Natural cannabinaids are obtained from the inflorescence of the plant cannabis saliva. They include marijuana, hashish, charas and gangla.
- ** Dependence is the tendency of the body to manifest a characteristic and unpleasant withdrawal syndrome if regular dose of drug/alcoho**vswowphipstRankeraciom**les anxiety shakiness, nausea and sweating.
