Short Questions

- 1 Ketamine
- 2 Placebo
- 3 Metoprolol
- 4 Uses and side effects of Chlorpheniramine
- 5 Radioactive iodine
- 6 Uterine stimulants
- 7 Albendazole
- 8 Streptokinase
- 9 Oral anticoagulants
- 10 Drug synergism
- 11 Antiemetics
- 12 Principles of management of diarrhea
- 13 Vitamin D
- 14 Co-Trimoxazole
- 15 Zidovudine
- 16 Cyclosporine
- 17 Name four drugs used in female Osteoporosis
- 18 Mention four adverse effects of phenytoin
- 19 Name four topical antifungal drugs
- 20 Two uses and two adverse effects of Thiazides
- 21 What is Tachyphylaxis? Give two examples
- 22 Mention four uses of Enalapril
- 23 Name four selective serotonin reuptake inhibitors

- 24 Cetrimide
- 25 Name four anticancer agents
- 26 Name two antioxidants
- 27 Name two non sedative antihistamines and two uses
- 28 Mention four adverse effects of Atropine
- 29 Name two alpha blockers and two uses
- 30 Adrenaline is administered in anaphylactic shock Explain
- 31 What is teratogenicity? Give two examples
- 32 What is prodrug? Give two examples
- 33 Doxycycline is preferred to tetracycline in patients with renal insufficiency Why?
- 34 Name four adverse effects of Chloramphenicol
- 35 Name two aminoglycosides and their two uses
- 36 Name four antiseptic and disinfectants
