R09

Code No: **D0503**

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD
M.Tech II - Semester Examinations, March/April 2011
ADVANCED COMPILER DESIGN
(COMPUTER SCIENCE)

Time: 3hours   Max. Marks: 60

Answer any five questions
All questions carry equal marks

- - -

1. a) Distinguish between the phases and passes of a compiler.
   b) Explain the bootstrapping process with a suitable diagram.   [8+4]

2. a) For the following grammar, explain the actions of a shift reduce parser in parsing the string $id_1 + id_2 * id_3$
   $$E \rightarrow E + E$$
   $$E \rightarrow E * E$$
   $$E \rightarrow (E)$$
   $$E \rightarrow id$$
   b) Explain with example the preprocessing required for predictive parsing.   [6+6]

3. a) Construct SLR parsing table for the following grammar:
   $$S \rightarrow Aa \mid bAc \mid dc \mid bda$$
   $$A \rightarrow d$$
   b) Explain how LR parser handles errors and provides recovery.   [6+6]

4. a) Explain syntax directed translation with an example.
   b) What are the differences between synthesized and inherited attributes?   [8+4]

5. a) Explain the contents of symbol table.
   b) What are storage allocation strategies? Explain the same.   [6+6]

6. a) Explain a simple strategy and the algorithm to generate assembly or machine code from quadruples.
   b) What are the principal sources of code optimization?   [6+6]

7. Discuss in detail different loop optimization techniques for code optimization with examples.   [12]

8. Explain the following:
   a) Data flow equations.
   b) DAG representation of basic blocks.
   c) LEX.   [12]
