

Code No: C6109, C6509

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD

M.Tech I - Semester Examinations March/April-2011

SATELLITE COMMUNICATIONS

(COMMON TO COMMUNICATION SYSTEMS, WIRELESS &amp; MOBILE COMMUNICATIONS)

Time: 3hours

Max.Marks:60

Answer any five questions  
All questions carry equal marks

- - -

1. a) Derive the expression for the Velocity of a geostationary Satellite, in its orbit.  
b) A geostationary Satellite moving in an equatorial circular orbit is at a height of 35786Kmt. From the earth's surface. If the earth's radius is 6378Kmt. Find the theoretical Maximum Coverage Angle, and the maximum slant range. [12]
2. Explain in detail about Attitude Control and Orbit Control of a satellite. [12]
3. a) Derive Friss's Transmission Equation.  
b) Show that the noise figure of a lossy Two Port Network is its loss itself.  
c) Derive the expression for the Noise Figure of the cascade of Three Two Port Networks. [12]
4. a) Derive the expression for the Signal to Noise Ratio of an SCPC-FDM-FM-FDMA System.  
b) An SCPC-FDM-FM-FDMA is with a specific Channel S/N = 33 dB. If the Test Tone Peak frequency deviation is 9.1 KHz and the base band signal frequency is 3.4 KHz, find the Band width and C/N ratio. [12]
5. a) Explain about TDMA Frame Structure.  
b) Write about TDMA Burst Time Plan. [8+4]
6. Derive the expression for Throughput of Slotted Aloha Network. [12]
7. Explain about a SPADE Network in detail. [12]
8. A Multiple Carrier satellite Circuit operates in 6/4 GHz Band width with the following characteristics:  
Uplink: Saturation Flux Density :  $-67.5 \text{ dbw/mt}^2$ ; I/P Back -off : 11dB  
Satellite G/T :  $- 11.6 \text{ dB/}^\circ\text{K}$ .  
Down Link: Satellite Saturation EIRP : 26.6 dBW; O/P Back-off : 6dB.  
Free Space Loss : 196.7 dB; Earth Station G/T :  $40.7 \text{ dB/}^\circ\text{K}$ .  
Ignoring other losses, calculate the C/N ratio for both links and the combined value. [12]
